Fanore	AG1-AG7	Settlement bounded by Black Head-Poulsallagh Complex SAC to the west and east. Please see mitigation in 2,3, and 4	Settlement bounded by Black Head-Poulsallagh Complex SAC to the west and east. Settlement surrounded by Annex habitat; Limestone pavement [8240]. Along coastline Annex habitats include Reefs [1170] Inner Galway Bay SPA 5.5km west. Grassland habitats within or adjacent to parcels may support SCI birds Yes Potential impact upon SCI birds (feeding, nesting, roosting, resting habitats) through increased disturbance (visual, physical, noise) and/or habitat fragmentation. Potential disturbance or fragmentation of Annex I habitat. Mitigation Any development applications shall include an assessment by a suitably qualified Ecologist as to the potential for the site to support SPA SCI bird	Yes Potential disturbance/habitat fragmentation identified in 2 which may result in decrease in SCI species density. Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., pollutants can degrade water quality below requirements for SCIs / QIs Mitigation Please see mitigation stipulated for 2 & 4a.	Karst groundwater body. Settlement bounded by Black Head-Poulsallagh Complex SAC to the west and east. SAC contains QI which is a GWDTE (petrifying springs) Yes Potential for impacts to water quality as a result of unattenuated run-off of organic waste and/or nutrients resulting in adverse effects upon European sites. Potential for impacts on the hydrology of groundwater-dependent Qualifying Interests of European sites (petrifying springs) Mitigation Any development proposal for animal housing shall ensure there is adequate capacity to store animal waste and application shall demonstrate proper disposal of waste without impacting upon ground or surface water quality.	Japanese knotweed records along road and in field 270m and 445m west from AG3, AG4, AG5 & AG8. Yes There is potential for disturbance and spread within European site or to hydrologically connect downstream European sites. These sites have invasive species listed as negative indicator within Conservation Objectives for QI(s) Mitigation Any development application shall include an assessment of the site by a suitable qualified ecologist for the presence of invasive species. Should invasive be present the extent of infestation shall be mapped. The impact upon Conservation Objective of European sites shall be assessed and a management plan drawn up outlining how invasive species will be management on site to prevent spread during construction and operation. An appropriately

Lisdoonvarna	R1, R2 Following review, a 10m buffer space was zoned between the Aille river and R2 to allow for the protection of riparian zone. R3 was removed from zoning and area remains part of OS11 to protect riparian treeline.	No	No Not within 3km Lesser horseshoe bat buffer.	Aille Clare_010 intersects R2 with a 10m buffer zoned Yes Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., pollutants can degrade water quality below requirements for SCIs/ QIs. Mitigation Please see mitigation stipulated for 2 & 4a. Development shall allow a riparian buffer as per Planning guidance within IFI document "Planning Watercourses in the Urban Environment' This includes ≥10m width along the stream side and ≥15m in the middle zone and ≥8m width in the outer zone as is appropriate for the river. Development	hydrogeological assessment and concludes that the development will not interfere with groundwater movement to the groundwater dependent Qualifying Interest of the European site. Aille Clare_010 water body flows through settlement and hydrologically connected to Black Head - Poulsallagh Complex SAC and Cliffs of Moher SPA. Karst groundwater body with a number of karst features north east of settlement (caves, depressions). Black Head - Poulsallagh Complex SAC 4.2km north east (as crow flies) and has a QI which is a GWDTE (petrifying springs) Potential connectivity via groundwater, road or land drainage. Yes Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites.	Several Japanese knotweed records within settlement with closest record 170m R2. Aille Clear_010 water body could potentially transport to downstream European sites. Yes There is potential for disturbance and spread within European site or to hydrologically connect downstream European sites. These sites have invasive species listed as negative indicator within Conservation Objectives for QI(s). Mitigation Any development application shall include an assessment of the site by a suitable qualified ecologist for the presence of invasive species. Should invasive be present the extent of infestation shall be mapped. The impact upon Conservation Objective of

Volume 3 Volume 1 Assessment Results – Proposed
Amendments and Minor Modifications-Final Objectives

REPORT

Table D-1: Summary of Assessment of Final Objectives within Volume 1- Written Statement of CCDP 2023-2029.

Proposed Amendment	CC	BFF	PHH	Soils & Geology	Water	AQCF	MA	Waste	Water Supply	Waste Supply	RE	CH	L	Commentary/ Recommendation from SEA/AA	Final Objectives following Minor Non-Material Modifications	Final AA Assessment
<p>To insert new Objective in Chapter 3 in relation to the Core Strategy</p> <p>CDP 3.1 - It is an objective of Clare County Council:</p> <p>To support the delivery of the Core Strategy in accordance with the Core Strategy Table 3.4 and the Core Strategy Map 3A.</p>	0	0	0	0	0	0	0	0	0	0	0	0	0	<p>This change represents a neutral effect on the Strategic Environmental Objectives.</p> <p>AA: No significant potential impact on European Sites.</p>	No change.	No change.
<p>To insert new Objective in Chapter 3 in relation to the Core Strategy</p> <p>CDP 3.2 It is an objective of Clare County Council:</p> <p>To ensure that sufficient land continues to be available to satisfy the housing requirement of the County over the lifetime of the Plan.</p>	0	0	0	0	0	0	0	0	0	0	0	0	0	<p>Taking into account the measures which have already been integrated into the Draft Plan which provide for and contribute towards environmental management and sustainable development, it is determined that any potential significant effects on the environment from this proposed amendment will be prevented.</p> <p>AA: No significant potential impact on European Sites.</p>	No change.	No change.
<p>To update CDP Objective 3.3 Appropriate Assessment, Strategic Environmental Assessment and Strategic Flood Risk Assessment</p> <p>It is an objective of the Clare County Council:</p> <p>a) To require compliance with the objectives and requirements of the Habitats Directive, specifically Article 6(3) and where necessary 6(4), Birds, Water Framework, and all other relevant EU Directives and all relevant transposing national legislation;</p> <p>b) To require project planning to be fully informed by ecological and environmental constraints at the earliest stage of project development and any necessary assessment to be undertaken, including assessments of disturbance to species, where required together with the preparation of both statutory and non-Statutory Ecological Impact Assessments (EclA);</p> <p>c) To protect, manage and enhance ecological connectivity and improve the coherence of the Natura 2000 Network;</p> <p>d) To require all proposals to ensure there is 'no net loss' of biodiversity within developments</p> <p>d) To ensure that European sites and Natural Heritage Areas (designated proposed NHAs) are appropriately protected;</p> <p>e) To require the preparation and assessment of all planning applications Plans and Projects in the plan area to have regard to the information, data and requirements of the Appropriate Assessment Natura Impact Report, SEA Environmental Report and Strategic Flood Risk Assessment Report contained in Volume 10 of this Development Plan; and</p> <p>f) to require compliance with the objectives of the Water Framework Directive and support the implementation of the 3rd Cycle River Basin Management Plan (and any other iteration during the lifetime of the CDP).</p>	+	+	+	+	+	+	+	+	+	+	+	+	<p>This change reflects positively on the Strategic Environmental Objectives and arose from an SEA Recommendation at the Chief Executive Report stage.</p> <p>AA: No significant potential impact on European Sites.</p>	It is to be noted that this objective was previously CDP 3.1.	Renumbering of objective only, No change.	

REPORT

Proposed Amendment	CC	BFF	PHH	Soils & Geology	Water	AQCF	MA	Waste	Water Supply	Waste Supply	RE	CH	L	Commentary/ Recommendation from SEA/AA	Final Objectives following Minor Non-Material Modifications	Final AA Assessment
<p>To amend CDP Objective 4.1 as follows:</p> <p>It is an objective of Clare County Council:</p> <p>a) To support Ennis as a self-sustaining, regional economic driver and as a key location for investment choice in the County and the Southern Region, and to support its enhanced development based on its strategic location relative to Limerick and Galway Cities, Shannon International Airport and the Atlantic Economic Corridor as well as its role as a centre of employment and economic activity;</p> <p>b) To support the implementation of Ennis 2040 to set the long-term economic and spatial strategy for the County Town with an agreed focus on an economic future and spatial pattern to 2040 and beyond;</p> <p>c) To prepare and implement a local area plan for the Ennis Town and Environs area incorporating a Local Transport Plan, a Strategic Environmental Assessment and an Appropriate Assessment during the lifetime of this Development Plan;</p> <p>d) To actively work to strengthen cross sectoral collaboration with neighbouring towns and cities, strengthening physical, social and economic links with Limerick and Galway in particular;</p> <p>e) To seek investment and to support the delivery of holistic infrastructure that will facilitate and accommodate sustainable growth in Ennis, subject to the outcome of the planning process and environmental assessments;</p> <p>e) To prepare a Mobility Plan for Ennis;</p> <p>f) To develop Ennis into a centre for lifelong learning and to support the further development of higher education facilities in the town Town;</p> <p>g) To support initiatives which seek to strengthen and develop niche retail and mixed-use services in Ennis town centre;</p> <p>h) To support and promote placemaking in Ennis which would include public realm regeneration and urban renewal initiatives which incorporate SuDs and public private partnership approaches for town centre regeneration;</p> <p>i) To seek the sustainable development of tourism facilities that enhance diverse tourism roles for Ennis and to seek investment in services to cater for increased visitor numbers;</p> <p>j) To support increased levels of town centre living and to assess the potential of the development of a modern family town centre living pilot project during the lifetime of the Plan; To integrate land use and transport planning such that new employment and residential development should be consolidated in a manner which renders it serviceable by public transport and accessible, at the local level, by walking, cycling and public transport;</p> <p>k) To promote and encourage sustainable transport, and in particular to make it convenient and attractive to walk, cycle or use public transport.</p> <p>k) To support climate adaptation initiatives within Ennis Town and surrounding areas to deliver on the objective of Ennis becoming Ireland's first Climate Adaptive Town;</p> <p>l) To monitor the cumulative effect of grants of planning permission on available wastewater capacity where connection to a public wastewater treatment plant is included as part of a development proposal;</p> <p>n) To support Ennis in realising its full potential in grey, green, and blue infrastructure.</p>	+	+	+	+	+	+	+	+	+	+	0	+	+	<p>This change reflects positively on the Strategic Environmental Objectives bearing in mind the measures which have already been integrated into the Draft Plan which provide for and contribute towards environmental management and sustainable development, it is determined that any potential significant effects on the environment from this proposed amendment will be prevented.</p> <p>AA: No significant potential impact on European Sites.</p>	No change.	<p>NIR mitigation was stipulated for this objective in the draft assessment which still applies. Following the implementation of the mitigation stipulated within the NIR assessment, no adverse effects upon European sites. .</p>

<p>e) To support and facilitate the development of renewable energy infrastructure within the airport and its confines, thereby enhancing energy security, including development of facilities in support of the aviation sector's transition to Sustainable/Renewable Aviation Fuel and energy;</p> <p>e) f) To ensure compliance with all relevant legislation as outlined in Objective CDP3.3</p>																
<p>To remove CDP Objective 6.7 Higher Education Institutes and the Knowledge Economy It is an objective of Clare County Council: a) To foster and develop strategic links with industries/businesses and higher education institutes in order to provide an enhanced locally-based knowledge economy and in order to improve education, training and skills development in the workforce; b) To encourage research, technology, development and innovation in collaboration with higher education institutes and development agencies; c) To support the continued development of third level provision in County Clare including the expansion of existing facilities such as the NUIG Shannon College of Hotel Management at Shannon, the University of Limerick, and the Technological University of the Shannon: Midlands Midwest campus' in Ennis as well as the development of new third level facilities. d) To support the higher education growth potential of Ennis town and its vision of becoming a centre for lifelong learning; and e) To encourage and facilitate start-up businesses with high growth potential.</p>	0	0	0	0	0	0	0	0	0	0	0	0	<p>This change reflects positively on the Strategic Environmental Objectives bearing in mind the measures which have already been integrated into the Draft Plan which provide for and contribute towards environmental management and sustainable development, it is determined that any potential significant effects on the environment from this proposed amendment will be prevented.</p> <p>AA: No significant potential impact on European Sites.</p>	<p>CDP6.7 has been renumbered as CDP6.9</p> <p>It is to be noted that the renumbering of this objective led to knock on effect to renumbering CDP 6.8 as CDP 6.7; CDP 6.9 is now CDP 6.8.</p>	No change.	
<p>Volume 1 Written Statement, Chapter 6 Economic Development and Enterprise, CDP 6.27 Data Centres – include an addition to the objective as follows:</p> <p>“It is an objective of Clare County Council: To facilitate and support the development of a data centre on the Enterprise zoned lands (ENT 3) at Toureen Ennis subject to normal planning considerations and the implementation of the findings of the SEA and AA associated with this Plan.</p> <p>Any planning application for this site must include an analysis of the impacts from Green House Gas (GHG) Emissions associated with both the energy and cooling systems on the environment in the context of Climate Change and our commitment in CAP 2021 which is to achieve a reduction of 51% in GHG emissions by 2030”.</p>	+	+	+	+	+	+	+	+	+	0	0	0	<p>This proposed amendment arose through a recommendation from the Strategic Environmental Assessment process.</p> <p>Data centres have recently become a topic of national concern due to their energy consumption and strain on the national electricity operator, Eirgrid. Data centres are dependent on a number of infrastructural requirements for them to function which include uninterrupted power supplies, ventilation, cooling systems, and network connectivity. With data centres consuming significant amounts of energy to function, they have been criticised for having a negative impact on the environment. Ireland currently has approximately 70 operational data centres. The centres are responsible for 1.58 per cent of Ireland's carbon emissions. Due to their reliance on the national electricity grid, the facilities are mostly powered by gas. There is one site identified in County Clare for the locating of a data centre which is</p>	<p>Further text was added to CDP 6.27 as follows:</p> <p>Best practise water conservation measures and water-efficient technologies will be required in any data centre development.</p>	The change is overall positive. No significant potential impact on European Sites.

<p>It is an objective of Clare County Council</p> <p>a) To protect, and preserve and promote the archaeological value of underwater archaeological sites in rivers, lakes, coastal, marine, intertidal and sub tidal environments; and</p> <p>b) To support the further exploration of the underwater archaeology of County Clare, including the San Marcos project, and any subsequent projects that may arise during the lifetime of this Plan.</p>														<p>AA: No significant potential impact on European Sites.</p>		

Appendix E
Volume 3 Assessment Results – Final Municipal District
Settlements

BACKGROUND

The development of the CCDP and the NIR of this plan were both iterative processes working in tandem. Following amendments from CCC, public consultations and resolution booklet, zoning for the Municipal District Settlements was finalised. Any zoning changes proposed were incorporated into the NIR process and the zoning was assessed/re-assessed. While the majority of updates were minor in some cases a new assessment of the zoned parcel was required. **Table E-1** below summarises the zonings that were amended and the updated NIR assessment results.

Text in **green** highlight new text added and text in **red strikethrough** highlights deleted text.

The final assessment for all zonings in all municipal district settlements are contained within **Tables E-2 to E-5**

APPENDICES FOR NATURA IMPACT REPORT

UPDATES TO FINAL MUNICIPAL DISTRICT SETTLEMENTS

Table E-1: Summary of updates to the assessment of Municipal District Settlements

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
Clooney	Utilities	Addition of Utilities zoning 1x uncoded UT	05/04/2023	<p>New assessment completed</p> <p>1 Direct Loss/Reduction of European site Habitat Area</p> <p>No</p> <p>2 Habitat/Species Disturbance or Fragmentation</p> <p>Within 3km Lesser horseshoe bat buffer (Newgrove House SAC). No mapped foraging grounds here.</p> <p>Yes</p> <p>Removal of hedgerows/treelines could potentially impact on the foraging / commuting / roosting habitat of Lesser horseshoe bats and /or further development could result in an increase in ambient light levels beyond the site boundary which could impact on foraging / commuting / roosting habitat of Lesser horseshoe bats.</p> <p>Potential otter habitat (feeding, resting, commuting and/or breeding habitat) present supporting the species ex-situ of an SAC or within the SAC. Construction and/or operational activities may result in disturbance to otter and/or permanent loss of habitat.</p> <p>Mitigation</p> <p>Any development application shall be accompanied by a full bat survey by a suitable qualified ecologist, particularly in relation to Lesser horseshoe bats usage of the site, and a full light spill modelling study to demonstrate that the chosen lighting design shall not create any increase in ambient light levels beyond the perimeter of the development footprint.</p> <p>Development applications shall not propose removal of woody vegetation around the perimeter of the site and shall address how linkages across the landscape can be maintained.</p> <p>Any new development shall not restrict otter commuting routes along a water body and a minimum 10m buffer zone shall be located along each bank (where there is not already development).</p> <p>Any application shall be accompanied by an EclA, AA screening and/or NIS as deemed relevant. These reports shall be informed by the relevant ecological surveys. Reporting shall include an assessment of potential disturbance during construction and operation (e.g., increased human presence, recreational activities, noise, lighting) upon otter at all life stage and supporting habitat</p> <p>3 Reduction in Species Density</p> <p>Yes</p> <p>Potential disturbance and/or habitat fragmentation identified in 2 which may result in decrease in QI/SCI species density.</p> <p>Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs</p> <p>Mitigation</p> <p>Please see mitigation stipulated for 2 & 4a.</p> <p>In addition, development applications shall be accompanied by an Ecological Impact Assessment and Appropriate Assessment Screening Report and/or Natura Impact Statement, whichever is deemed relevant these should include an assessment of potential impacts upon water dependant QIs at all life stages (migration/ spawning/juvenile/adult).</p> <p>Development shall allow a riparian buffer as per Planning guidance within IFI document "Planning Watercourses in the Urban Environment' This includes ≥ 10m width along the stream side and ≥ 15m in the middle zone and ≥ 8m width in the outer zone as is appropriate for the river.</p> <p>Development within these zones shall be cognisant of the types of development suggested for each zone and ensure natural floodplain of the river is protected.</p> <p>Riparian buffer along the riverbanks shall be maintained to ensure ecological corridors are not fragmented and the ecological services these riparian corridors perform for the watercourse are maintained (e.g., flood attenuation, temperature regulation, woody debris source, hydromorphology)</p> <p>4 Changes in Key Indicators of Conservation Value -Water Quality/Air</p> <p>The Hell River flows within zoned parcel forming a pathway to Lower River Shannon SAC.</p> <p>Yes</p> <p>Potential for impacts upon water quality during construction and operational phase (including maintenance of pathways/ infrastructure) due to unattenuated construction runoff resulting in adverse effects upon the Lower River Shannon SAC</p> <p>Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon the Lower River Shannon SAC.</p> <p>Mitigation</p> <p>Appropriate surface water management shall be installed during construction phase to ensure no direct discharges of unattenuated water enters any surface water body and the Lower River Shannon SAC. A Surface Water Management Plan shall be submitted as part of any planning application detailing how surface water run-off (including silt/hydrocarbons and other pollutants) shall be managed and controlled during construction.</p> <p>During operation appropriate SUDs shall be installed to treat surface water runoff prior to discharge to any surface water body (e.g., green roof, silt traps, petrol interceptors, permeable paving.</p> <p>Appropriate wastewater treatment facilities shall be provided that can fully demonstrate that there will be no adverse effects upon water quality and European sites and compliance with mitigation for CDP11.32</p> <p>Changes in Key Indicators of Conservation Value -Invasive Species</p> <p>No</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
Clooney	Buffer	Deletion of OS1 and OS2 and replaced with two uncoded buffer OS1, OS2 2 x uncoded buffer	05/04/2022	No change
Clooney	All	Settlement intersects only 1 bat buffer not 3. Error corrected	05/04/2022	2 Habitat/Species Disturbance or Fragmentation Within 3km Lesser horseshoe bat buffer (Newgrove House SAC). Not within mapped foraging grounds for this SAC. Old Domestic Building [Rylano] SAC, Old Domestic Building [Keovagh] SAC).
Cratloe	ER	Deletion of ER7 as was inserted into original assessment in error. ER4-ER10 ER4 – ER6, ER8- ER10	14/04/2022	No change to the assessment of other ER zonings
Cratloe	VGA	Deletion of VGA4 as was inserted into original assessment in error. VGA2, VGA3 & VGA4	14/04/2022	No change to the assessment of other VGA zonings
Moyasta	Buffer	Label change to buffer 1x uncoded buffer BUF1	14/04/2022	No change to the assessment of other VGA zonings
Kilmaley	Open space uncoded parcel	3 additional open space uncoded parcels . x14 uncoded parcel	05/04/2022	No change
Toonagh	All zoned parcels	Within 3km of Lesser horseshoe bat SAC Not within mapped foraging grounds for these SACs.	05/04/2022	No change
Kilnamona	Buffer Space	Additional of Buffer space (1x uncoded parcel)	05/04/2022	1 Direct Loss/Reduction of European site Habitat Area N/A No development proposed. 2 Habitat/Species Disturbance or Fragmentation N/A No development proposed. 3 Reduction in Species Density N/A No development proposed. 4 Changes in Key Indicators of Conservation Value -Water Quality/Air N/A No development proposed. 5 Changes in Key Indicators of Conservation Value -Invasive Species

APPENDICES FOR NATURA IMPACT REPORT

Kilnamona	Open Space	Additional of OS (1x uncoded parcel)	05/04/2022	<p>N/A No development proposed.</p> <p>1 Direct Loss/Reduction of European site Habitat Area</p> <p>N/A No development proposed.</p> <p>2 Habitat/Species Disturbance or Fragmentation</p> <p>N/A No development proposed.</p> <p>3 Reduction in Species Density</p> <p>N/A No development proposed.</p> <p>4 Changes in Key Indicators of Conservation Value -Water Quality/Air</p> <p>N/A No development proposed.</p> <p>5 Changes in Key Indicators of Conservation Value -Invasive Species</p> <p>N/A No development proposed.</p>
Ennis	Agriculture	<p>Number of AG parcels has changed</p> <p>AG2 and 1779 uncoded AG zones.</p> <p>Following review uncoded AG parcels bordering Lough Girroga were not rezoned for residential in order to help preserve ecological corridors and sensitive habitats.</p> <p>One AG parcel was rezoned to LDR 240m north of the lough, see LDR14.</p>	05/04/2022	No change
Ennis	Buffer Space	<p>Number of buffer spaces zoned has increased.</p> <p>Buffer space x 44 87 uncoded zoned areas</p>	05/04/2022	No change
Ennis	Car parks	<p>Car parks 26 x30 uncoded zoned areas</p> <p>Some zonings are located within 3km Lesser horseshoe bat buffer. Existing developments</p> <p>22x zonings are located within 3km lesser horseshoe bat buffer. These are all existing</p>		<p>4 Changes in Key Indicators of Conservation Value -Water Quality/Air</p> <p>29x zonings are existing development adjacent to 554m from Lower River Shannon SAC</p> <p>1x zoning is Ag land 30m from Lower River Shannon SAC</p> <p>Karst area</p> <p>Yes</p> <p>Potential for impacts on the hydrology of groundwater-dependent Qualifying Interests of European sites.</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
		developments with the exception of 1 zoning which is ag land. This does not have any mapped SAC foraging grounds for lesser horseshoe.		<p>Potential for impacts upon water quality during construction (including upgrades of existing car parks) and operational phase due to unattenuated runoff resulting in adverse effects upon European sites. Potential pathways identified either via existing drainage and/or overland flow.</p> <p>Mitigation</p> <p>Appropriate surface water management shall be installed during construction phase to ensure no direct discharges of unattenuated water enters any surface water body and European sites. A Surface Water Management Plan shall be submitted as part of any planning application detailing how surface water run-off (including silt/hydrocarbons and other pollutants) shall be managed and controlled during construction.</p> <p>During operation appropriate SUDs shall be installed to treat surface water runoff prior to discharge to any surface water body (e.g., green roof, silt traps, petrol interceptors, permeable paving.).</p> <p>Any development application shall be accompanied by a hydrogeological assessment and concludes that the development will not interfere with groundwater movement to the groundwater dependent Qualifying Interest of the European site.</p>
Ennis	COM8	<p>Part of buffer rezoned to COM8</p> <p>Following consultation it was recommended that this was rezoned to allow 60m between the River Fergus and COM8 and 30m buffer between the SAC and COM8. Area rezoned to incorporate this.</p>	05/04/2022	<p>New assessment completed</p> <p>1 Direct Loss/Reduction of European site Habitat Area</p> <p>No</p> <p>Ennis 2040- AA completed. All plans/projects shall be in accordance with the mitigation set out within the Ennis 2040 SEA and NIS</p> <p>2 Habitat/Species Disturbance or Fragmentation</p> <p>Not within 3km Lesser horseshoe bat buffer. However, this species has been recorded within surrounding environs and Ennis town is almost surrounded by bat buffer zones. Following precautionary principal Ennis town is considered to support the surrounding adjacent SACs and hence mitigation for bats is stipulated.</p> <p>Habitat is grassland (potentially wet grassland) /willow woodland/scrub. Habitat mapped as inland marsh on Corine landcover type.</p> <p>30m from Lower River Shannon SAC with this space designated as buffer.</p> <p>potentially supporting QIs of Lower River Shannon SAC as well as SCI birds of Lower River Shannon & River Fergus Estuaries SPA 2.5km south or Ballyallia Lough SPA 3km north.</p> <p>General biodiversity - from aerial imagery there are two ponds located within COM8. These should not be removed as they have potential to contain frogs/newts and generally supporting habitat for adjacent biodiversity.</p> <p>Yes</p> <p>Potential otter habitat (feeding, resting, commuting and/or breeding habitat) present supporting the species ex-situ of SAC. Construction and/or operational activities may result in disturbance to otter and/or permanent loss of habitat.</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>Removal of hedgerows/treelines could potentially impact on the foraging / commuting / roosting habitat of Lesser horseshoe bats and /or further development could result in an increase in ambient light levels beyond the site boundary which could impact on foraging / commuting / roosting habitat of Lesser horseshoe bats.</p> <p>Potential impact upon SCI birds (feeding, nesting, roosting, resting habitats) through increase disturbance (visual, physical).</p> <p>Potential Annex grassland habitat within site (6410)</p> <p>Mitigation</p> <p>Any new development shall not restrict otter commuting routes along a water body and a minimum 10m buffer zone shall be located along each bank (where there is not already development).</p> <p>Any application shall be accompanied by an EclA, AA screening and/or NIS as deemed relevant. These reports shall be informed by the relevant ecological surveys which should include as assessment of the ponds onsite.</p> <p>Reporting shall also include an assessment of potential disturbance during construction and operation (e.g., increased human presence, recreational activities, noise, lighting). upon otter at all life stage and supporting habitats.</p> <p>Any development application shall be accompanied by a full bat survey by a suitable qualified ecologist, particularly in relation to Lesser horseshoe bats usage of the site, and a full light spill modelling study to demonstrate that the chosen lighting design shall not create any increase in ambient light levels beyond the perimeter of the development footprint.</p> <p>Development applications shall not propose removal of woody vegetation around the perimeter of the site and shall address how linkages across the landscape can be maintained.</p> <p>Any development applications shall include an assessment by a suitably qualified Ecologist as to the potential for the site to support SPA SCI bird species. If the site is deemed suitable, detailed bird surveys should be undertaken on the site to accompany the development application. These assessments and/or surveys should inform an Appropriate Assessment Screening Report and/or Natura Impact Statement, dependent on the outcome of the site survey. If the site is deemed suitable, a full lightspill modelling study should accompany all development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development footprint in relation to SCI birds.</p> <p>Removal of any hedgerows or trees (including trimming of trees) shall be undertaken outside of the bird nesting season 1st March to 31st August inclusive. If these works are required within this season, then an assessment of vegetation to be removed shall be conducted by a suitably qualified ecologist. Additional monitoring and licencing from NPWS may be required following the ecological assessment. Any vegetation removal within the nesting season shall be supervised by a suitably qualified ecologist if deemed necessary.</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>Any development application shall ensure that it is accompanied by a full habitat assessment and assess potential for Annex I habitat to occur on site. Should any supporting Annex habitat occur the area should be rezoned to avoid development</p> <p>3 Reduction in Species Density</p> <p>Yes</p> <p>Potential disturbance and/or habitat fragmentation identified in 2 which may result in decrease in QI species density</p> <p>Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs</p> <p>Mitigation</p> <p>Please see mitigation stipulated for 4a. In addition, development applications shall be accompanied by an Ecological Impact Assessment and Appropriate Assessment Screening Report and/or Natura Impact Statement, whichever is deemed relevant these should include an assessment of potential impacts upon water dependant QIs at all life stages (migration/spawning/juvenile/adult).</p> <p>Development shall allow a riparian buffer as per Planning guidance within IFI document 'Planning Watercourses in the Urban Environment' This includes $\geq 10\text{m}$ width along the stream side and $\geq 15\text{m}$ in the middle zone and $\geq 8\text{m}$ width in the outer zone as is appropriate for the river. Development within these zones shall be cognisant of the types of development suggested for each zone and ensure natural floodplain of the river is protected. In this case a 60m buffer has been zoned between the river and COM8.</p> <p>Riparian buffer along the riverbanks shall be maintained to ensure ecological corridors are not fragmented and the ecological services these riparian corridors perform for the watercourse are maintained (e.g., flood attenuation, temperature regulation, woody debris source, hydromorphology).</p> <p>4 Changes in Key Indicators of Conservation Value -Water Quality/Air</p> <p>30m from Lower River Shannon SAC.</p> <p>Yes</p> <p>Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites.</p> <p>Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites.</p> <p>Mitigation</p> <p>Appropriate surface water management shall be installed during construction phase to ensure no direct discharges of unattenuated water enters any surface water body and European sites. A Surface Water Management Plan shall be submitted as part of any planning application detailing how surface water run-off (including silt/hydrocarbons and other pollutants) shall be managed and controlled during construction.</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>During operation appropriate SUDs shall be installed to treat surface water runoff prior to discharge to any surface water body (e.g., green roof, silt traps, petrol interceptors, permeable paving). Appropriate wastewater treatment facilities shall be provided that can fully demonstrate that there will be no adverse effects upon water quality and European sites and compliance with mitigation for CDP11.32.</p> <p>Any development application shall be accompanied by a hydrogeological assessment and concludes that the development will not interfere with groundwater movement to the groundwater dependent Qualifying Interest of the European site.</p> <p>5 Changes in Key Indicators of Conservation Value -Invasive Species</p> <p>No</p>
Ennis	COM9	Part of open space rezoned to COM9		<p>1 Direct Loss/Reduction of European site Habitat Area</p> <p>No Ennis 2040- AA completed. All plans/projects shall be in accordance with the mitigation set out within the Ennis 2040 SEA and NIS</p> <p>2 Habitat/Species Disturbance or Fragmentation</p> <p>Not within 3km Lesser horseshoe bat buffer. However, this species has been recorded within surrounding environs and Ennis town is almost surrounded by bat buffer zones. Following precautionary principal Ennis town is considered to support the surrounding adjacent SACs and hence mitigation for bats is stipulated.</p> <p>Habitat is grassland, wet grassland,hedgerow/treelines. Train line borders western boundary. Lower River Shannon SAC 340m east with open spaces /buffer to the SAC.</p> <p>Potentially supporting QIs of Lower River Shannon SAC as well as SCI birds of Lower River Shannon & River Fergus Estuaries SPA 2.5km south or Ballyallia Lough SPA 3km north.</p> <p>Yes</p> <p>Removal of hedgerows/treelines could potentially impact on the foraging / commuting / roosting habitat of Lesser horseshoe bats and /or further development could result in an increase in ambient light levels beyond the site boundary which could impact on foraging / commuting / roosting habitat of Lesser horseshoe bats.</p> <p>Potential impact upon SCI birds (feeding, nesting, roosting, resting habitats) through increase disturbance (visual, physical).</p> <p>Potential otter habitat (feeding, resting, commuting and/or breeding habitat) present supporting the species ex-situ of an SAC or within the SAC. Construction and/or operational activities may result in disturbance to otter and/or permanent loss of habitat.</p> <p>Mitigation</p> <p>Any development application shall be accompanied by a full bat survey by a suitable qualified ecologist, particularly in relation to Lesser horseshoe bats usage of the site, and a full light spill modelling study to demonstrate that the chosen lighting design shall not create any increase in ambient light levels beyond the perimeter of the development footprint.</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>Development applications shall not propose removal of woody vegetation around the perimeter of the site and shall address how linkages across the landscape can be maintained.</p> <p>Any development applications shall include an assessment by a suitably qualified Ecologist as to the potential for the site to support SPA SCI bird species. If the site is deemed suitable, detailed bird surveys should be undertaken on the site to accompany the development application. These assessments and/or surveys should inform an Appropriate Assessment Screening Report and/or Natura Impact Statement, dependent on the outcome of the site survey. If the site is deemed suitable, a full lightspill modelling study should accompany all development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development footprint in relation to SCI birds.</p> <p>Removal of any hedgerows or trees (including trimming of trees) shall be undertaken outside of the bird nesting season 1st March to 31st August inclusive. Any vegetation removal within the nesting season shall be supervised by a suitably qualified ecologist if deemed necessary.</p> <p>Any new development shall not restrict otter commuting routes along a water body and a minimum 10m buffer zone shall be located along each bank (where there is not already development).</p> <p>Any application shall be accompanied by an EcIA, AA screening and/or NIS as deemed relevant. These reports shall be informed by the relevant ecological surveys. Reporting shall include an assessment of potential disturbance during construction and operation (e.g., increased human presence, recreational activities, noise, lighting) upon otter at all life stage and supporting habitat.</p> <p>Any development proposal shall undergo the AA process (AA screening or NIS as deemed necessary) and full habitat and species assessment (including but not limited to Annex grasslands). The proposal shall clearly identify the spatial extent of any expansion/ development and shall address the potential for fragmentation/disturbance (both in isolation and in combination with other plans/projects) upon the European site. Proposals that cannot avoid adverse effects upon European sites shall not be permitted.</p> <p>3 Reduction in Species Density</p> <p>Yes</p> <p>Potential disturbance and/or habitat fragmentation identified in 2 which may result in decrease in QI/SCI species density</p> <p>Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>Mitigation</p> <p>Please see mitigation stipulated for 2 & r 4a.</p> <p>In addition, development applications shall be accompanied by an Ecological Impact Assessment and Appropriate Assessment Screening Report and/or Natura Impact Statement, whichever is deemed relevant these should include an assessment of potential impacts upon water dependant QIs at all life stages (migration/spawning/juvenile/adult).</p> <p>Where applicable Development shall allow a riparian buffer as per Planning guidance within IFI document "Planning Watercourses in the Urban Environment' This includes ≥10m width along the stream side and ≥15m in the middle zone and ≥8m width in the outer zone as is appropriate for the river. Development within these zones shall be cognisant of the types of development suggested for each zone and ensure natural floodplain of the river is protected.</p> <p>Riparian buffer along the riverbanks shall be maintained to ensure ecological corridors are not fragmented and the ecological services these riparian corridors perform for the watercourse are maintained (e.g., flood attenuation, temperature regulation, woody debris source, hydromorphology).</p> <p>4 Changes in Key Indicators of Conservation Value -Water Quality/Air</p> <p>Potential connection to Lower River Shannon SAC via surface water, drainage and/or WTP discharges</p> <p>Yes</p> <p>Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites.</p> <p>Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites.</p> <p>Mitigation</p> <p>Appropriate surface water management shall be installed during construction phase to ensure no direct discharges of unattenuated water enters any surface water body and European sites. A Surface Water Management Plan shall be submitted as part of any planning application detailing how surface water run-off (including silt/hydrocarbons and other pollutants) shall be managed and controlled during construction.</p> <p>During operation appropriate SUDs shall be installed to treat surface water runoff prior to discharge to any surface water body (e.g., green roof, silt traps, petrol interceptors, permeable paving.</p> <p>Appropriate wastewater treatment facilities shall be provided that can fully demonstrate that there will be no adverse effects upon water quality and European sites and compliance with mitigation for CDP11.32.</p> <p>5 Changes in Key Indicators of Conservation Value -Invasive Species</p> <p>No</p>
Ennis	REC1	Change from uncoded AG to REC1 1 x uncoded AG REC1		<p>1 Direct Loss/Reduction of European site Habitat Area</p> <p>No</p>

The proposal shall clearly identify the spatial extent of any development and shall address the potential for increased disturbance (both in isolation and in combination with other plans/projects) upon the European site. Proposals that cannot avoid adverse effects upon European sites shall not be permitted.
Killaloe	R uncoded	Part of TOU2 rezoned as uncoded Residential	09/04/2023	<p>1 Direct Loss/Reduction of European site Habitat Area No</p> <p>2 Habitat/Species Disturbance or Fragmentation Not within 3km Lesser horseshoe bat buffer. Adjacent to Lough Derg and Lower River Shannon SAC. Lough Derg SPA upstream of zoned parcel. Ag pasture with southern section mapped as GS1 "Dry calcareous neutral grassland". This has potential to correspond with Annex I habitats Semi-natural dry grasslands and scrubland facies on calcareous substrates (Festuco-Brometea) (*important orchid sites) (6210) or Juniperus communis formations on heaths or calcareous grasslands (5130).</p> <p>Yes Potential otter habitat (feeding, resting, commuting and/or breeding habitat) present supporting the species of the Lower River Shannon SAC. Construction and/or operational activities may result in disturbance to otter and/or permanent loss of habitat. Potential impact upon SCI birds (feeding, nesting, roosting, resting habitats) through increased disturbance (visual, physical, noise). Potential disturbance/fragmentation of Annex I habitat should it be present.</p> <p>Mitigation Any new development shall not restrict otter commuting routes along a water body and a minimum 10m buffer zone shall be located along each bank (where there is not already development). Any application shall be accompanied by an EcIA, AA screening and/or NIS as deemed relevant. These reports shall be informed by the relevant ecological surveys. Reporting shall include an assessment of potential disturbance during construction and operation (e.g., increased human presence, recreational activities, noise, lighting) upon otter at all life stage and supporting habitat. Any development applications shall include an assessment by a suitably qualified Ecologist as to the potential for the site to support SPA SCI bird species. If the site is deemed suitable, detailed bird surveys should be undertaken on the site to accompany the development application. These assessments and/or surveys should inform an Appropriate Assessment Screening Report and/or Natura Impact Statement, dependent on the outcome of the site survey. If the site is deemed suitable, a full lightspill modelling study should accompany all development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development footprint in relation to SCI birds.</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>Removal of any hedgerows or trees (including trimming of trees) shall be undertaken outside of the bird nesting season 1st March to 31st August inclusive. If these works are required within this season, then an assessment of vegetation to be removed shall be conducted by a suitably qualified ecologist. Additional monitoring and licencing from NPWS may be required following the ecological assessment. Any vegetation removal within the nesting season shall be supervised by a suitably qualified ecologist if deemed necessary.</p> <p>Any development proposal shall undergo the AA process (AA screening or NIS as deemed necessary) and full habitat and species assessment (including but not limited to Annex grasslands). The proposal shall clearly identify the spatial extent of any expansion/ development and shall address the potential for fragmentation/disturbance (both in isolation and in combination with other plans/projects) upon the European site. Proposals that cannot avoid adverse effects upon European sites shall not be permitted.</p> <p>3 Reduction in Species Density</p> <p>Yes</p> <p>Potential disturbance and/or habitat fragmentation identified in 2 which may result in decrease in QI species density.</p> <p>Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs</p> <p>Mitigation</p> <p>Please see mitigation stipulated for 2 & 4a.</p> <p>In addition, development applications shall be accompanied by an Ecological Impact Assessment and Appropriate Assessment Screening Report and/or Natura Impact Statement, whichever is deemed relevant these should include an assessment of potential impacts upon water dependant QIs at all life stages (migration /spawning /juvenile /adult).</p> <p>4 Changes in Key Indicators of Conservation Value -Water Quality/Air</p> <p>65m from Lough Derg and 30m Lower River Shannon SAC.</p> <p>Yes</p> <p>Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites.</p> <p>Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites.</p> <p>Mitigation</p> <p>Appropriate surface water management shall be installed during construction phase to ensure no direct discharges of unattenuated water enters any surface water body and European site. A Surface Water Management Plan shall be submitted as part of any planning application detailing how surface water run-off (including silt/hydrocarbons and other pollutants) shall be managed and controlled during construction.</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>During operation appropriate SUDs shall be installed to treat surface water runoff prior to discharge to any surface water body (e.g., green roof, silt traps, petrol interceptors, permeable paving.).</p> <p>Appropriate wastewater treatment facilities shall be provided that can fully demonstrate that there will be no adverse effects upon water quality and European sites and compliance with mitigation for CDP11.32.</p> <p>5 Changes in Key Indicators of Conservation Value -Invasive Species</p> <p>No</p>
Feakle	AG	AG1, AG2 & 2x uncoded AG	09/04/2023	No change to the assessment
Feakle	B6	Addition of B6 BU1- BU5 & BU7 to-BU9	09/04/2023	No change to the assessment
Feakle	SR	SR1 & uncoded SR		<p>2 Habitat/Species Disturbance or Fragmentation</p> <p>Not within 3km Lesser horseshoe bat buffer.</p> <p>Yes</p> <p>SR1 within 10m of Slieve Aughty SPA and uncoded SR within 256m – Hen Harrier, Merlin separated by a road.</p> <p>Cloghaun_030 hydrologically connected to Lower River Shannon SAC with otter as QI. Parcels 15m- 30m from river adjacent to the river with a buffer space designated between. Habitats within parcels may support otter as well as the river habitat.</p> <p>Wet grassland habitat (GS4) mapped surrounding both parcels. This has potential contain examples of the Annex I habitat, 'Molinia meadows on calcareous, peaty or clayey-silt-laden soils (<i>Molinia caerulea</i>) [6410] which is a QI of the Lower River Shannon SAC. Marsh GM1 also mapped adjacent to uncoded SR which has potential to correspond to Hydrophilous tall herb Annex habitat (6430)</p>
Feakle	C1, C3	Amendment to assessment text		<p>1 Direct Loss/Reduction of European site Habitat Area</p> <p>C1 and C3 bordering Slieve Aughty SPA -Hen Harrier, Merlin with potential supporting habitat within parcels</p> <p>Existing developments within C1 (church) and C3 (school) with no room for expansion adjacent to the SPA. please see mitigation in 2, 3 and 4a..</p>
Feakle	MU1			<p>1 Direct Loss/Reduction of European site Habitat Area</p> <p>Yes</p> <p>Part of zoning parcel intersects the Slieve Aughty SPA however there is existing development here with ag grassland and treelines.</p> <p>Mitigation</p> <p>Any further development proposal shall undergo the AA process (AA screening or NIS as deemed necessary) including habitat assessments. The proposal shall clearly identify the spatial extent of</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				any development and shall address the potential for increased disturbance (both in isolation and in combination with other plans/projects) upon the European site. Proposals that cannot avoid adverse effects upon European sites shall not be permitted. Please see 2, 3 & 4
Ogonelloe	VGA	Addition of uncoded VGA VGA1 -VGA3 & 1 x uncoded VGA	09/04/2023	Included with assessment of other VGA zonings, no change
Quin	SR4	Addition of new SR4 zoning	09/04/2023	<p>1 Direct Loss/Reduction of European site Habitat Area</p> <p>No</p> <p>2 Habitat/Species Disturbance or Fragmentation</p> <p>Within 3km Lesser horseshoe bat buffer (Old Domestic Building [Keevagh] SAC & Poulmagordon Cave [Quin] SAC). River Shannon & River Fergus Estuaries SPA 3.5km from parcel, Lower River Shannon SAC 4.5km from parcel.</p> <p>20m from Rhine_030 watercourse separated by a zoned buffer.</p> <p>Ag pasture with mature trees in small wood.</p> <p>Lands within and adjacent to parcel have potential to support SCI birds.</p> <p>Yes</p> <p>Removal of hedgerows/treelines could potentially impact on the foraging / commuting / roosting habitat of Lesser horseshoe bats and /or further development could result in an increase in ambient light levels beyond the site boundary which could impact on foraging/ commuting / roosting habitat of Lesser horseshoe bats.</p> <p>Potential impact upon SCI birds (ex-situ feeding, nesting, roosting, resting habitats) through increased disturbance (visual, physical, noise) or fragmentation of supporting habitat.</p> <p>Potential otter habitat (feeding, resting, commuting and/or breeding habitat) present supporting the species ex-situ of an SAC or within the SAC. Construction and/or operational activities may result in disturbance to otter and/or permanent loss of habitat.</p> <p>Mitigation</p> <p>Any development application shall be accompanied by a full bat survey by a suitable qualified ecologist, particularly in relation to Lesser horseshoe bats usage of the site, and a full light spill modelling study to demonstrate that the chosen lighting design shall not create any increase in ambient light levels beyond the perimeter of the development footprint.</p> <p>Development applications shall not propose removal of woody vegetation around the perimeter of the site and shall address how linkages across the landscape can be maintained.</p> <p>Any development applications shall include an assessment by a suitably qualified Ecologist as to the potential for the site to support SPA SCI bird species. If the site is deemed suitable, detailed bird surveys should be undertaken on the site to accompany the development application. These assessments and/or surveys should inform an Appropriate Assessment Screening Report and/or Natura Impact Statement, dependent on the outcome of the site survey.</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>If the site is deemed suitable, a full lightspill modelling study should accompany all development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development footprint in relation to SCI birds.</p> <p>Any new development shall not restrict otter commuting routes along a water body and a minimum 10m buffer zone shall be located along each bank (where there is not already development).</p> <p>Any application shall be accompanied by an EclA, AA screening and/or NIS as deemed relevant. These reports shall be informed by the relevant ecological surveys. Reporting shall include an assessment of potential disturbance during construction and operation (e.g., increased human presence, recreational activities, noise, lighting) upon otter at all life stage and supporting habitat.</p> <p>3 Reduction in Species Density</p> <p>Yes</p> <p>Potential disturbance and/or habitat fragmentation identified in 2 which may result in decrease in QI/SCI species density.</p> <p>Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs</p> <p>Mitigation</p> <p>Please see mitigation stipulated for 2 & 4a.</p> <p>In addition, development applications shall be accompanied by an Ecological Impact Assessment and Appropriate Assessment Screening Report and/or Natura Impact Statement, whichever is deemed relevant these should include an assessment of potential impacts upon water dependant QIs at all life stages (migration /spawning /juvenile /adult).</p> <p>Development shall allow a riparian buffer as per Planning guidance within IFI document "Planning Watercourses in the Urban Environment' This includes ≥10m width along the stream side and ≥15m in the middle zone and ≥8m width in the outer zone as is appropriate for the river. Development within these zones shall be cognisant of the types of development suggested for each zone and ensure natural floodplain of the river is protected.</p> <p>4 Changes in Key Indicators of Conservation Value -Water Quality/Air</p> <p>Karst groundwater body with features surrounding settlement (caves, depressions)</p> <p>Rhine_030 flows 20m to west of SR4 and river ultimately discharges to Lower River Shannon SAC and River Shannon & River Fergus Estuaries SPA 4.5km -3.5km downstream. Potential connectivity to European sites via groundwater flow, road drainage, WWT discharges.</p> <p>Yes</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites.</p> <p>Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites.</p> <p>Mitigation</p> <p>Appropriate surface water management shall be installed during construction phase to ensure no direct discharges of unattenuated water enters any surface water body and European site. A Surface Water Management Plan shall be submitted as part of any planning application detailing how surface water run-off (including silt/hydrocarbons and other pollutants) shall be managed and controlled during construction.</p> <p>During operation appropriate SUDs shall be installed to treat surface water runoff prior to discharge to any surface water body (e.g., green roof, silt traps, petrol interceptors, permeable paving.).</p> <p>Appropriate wastewater treatment facilities shall be provided that can fully demonstrate that there will be no adverse effects upon water quality and European sites and compliance with mitigation for CDP11.32.</p> <p>Any development application shall be accompanied by a hydrogeological assessment and concludes that the development will not interfere with groundwater movement to the groundwater dependent Qualifying Interest of the European site or connected European sites.</p> <p>5 Changes in Key Indicators of Conservation Value -Invasive Species</p> <p>No</p>
Kilmurry	COM1, COM2	Addition of zoned parcels COM1 COM2		<p>1 Direct Loss/Reduction of European site Habitat Area</p> <p>No</p> <p>2 Habitat/Species Disturbance or Fragmentation</p> <p>COM2 within 3km Lesser horseshoe bat buffer (Ratty River Cave SAC).</p> <p>Lower River Shannon SAC and River Shannon & River Fergus Estuaries SPA 9km and 9.4km downstream of village.</p> <p>Parcels developed with some amenity grass, mature trees and ag pasture. adjacent potentially support SCI birds.</p> <p>Yes</p> <p>Potential impact upon SCI birds (ex-situ feeding, nesting, roosting, resting habitats) through increased disturbance (visual, physical, noise).</p> <p>Removal of hedgerows/treelines could potentially impact on the foraging / commuting / roosting habitat of Lesser horseshoe Bats and /or further development could result in an increase in ambient light levels beyond the site boundary which could impact on foraging / commuting /roosting habitat of Lesser horseshoe Bats and/ or</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>Removal or renovation of existing old buildings located within the development site may potentially contain Lesser horseshoe bat roosts.</p> <p>Mitigation</p> <p>Any development proposal shall undergo the AA process (AA screening or NIS as deemed necessary) and full habitat assessment. The proposal shall clearly identify the spatial extent of any expansion/ development and shall address the potential for fragmentation (both in isolation and in combination with other plans/projects) upon the European site. Proposals that cannot avoid adverse effects upon European sites shall not be permitted.</p> <p>Any development applications shall include an assessment by a suitably qualified Ecologist as to the potential for the site to support SPA SCI bird species. If the site is deemed suitable, detailed bird surveys should be undertaken on the site to accompany the development application. These assessments and/or surveys should inform an Appropriate Assessment Screening Report and/or Natura Impact Statement, dependent on the outcome of the site survey.</p> <p>If the site is deemed suitable, a full lightspill modelling study should accompany all development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development footprint in relation to SCI birds.</p> <p>Removal of any hedgerows or trees (including trimming of trees) shall be undertaken outside of the bird nesting season 1st March to 31st August inclusive. If these works are required within this season, then an assessment of vegetation to be removed shall be conducted by a suitably qualified ecologist. Additional monitoring and licencing from NPWS may be required following the ecological assessment. Any vegetation removal within the nesting season shall be supervised by a suitably qualified ecologist if deemed necessary.</p> <p>Any development application shall be accompanied by a full bat survey by a suitable qualified ecologist, particularly in relation to Lesser horseshoe bats usage of the site, and a full light spill modelling study to demonstrate that the chosen lighting design shall not create any increase in ambient light levels beyond the perimeter of the development footprint.</p> <p>Development applications shall not propose removal of woody vegetation around the perimeter of the site and shall address how linkages across the landscape can be maintained.</p> <p>3 Reduction in Species Density</p> <p>Yes</p> <p>Potential disturbance identified in 2 which may result in decrease in QI/SCI species density.</p> <p>Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs</p> <p>Mitigation</p> <p>Please see mitigation stipulated for 2 & 4a.</p>

APPENDICES FOR NATURA IMPACT REPORT

Settlement	Zoning	Description of amendment	Date	Updated NIR assessment
				<p>In addition, development applications shall be accompanied by an Ecological Impact Assessment and Appropriate Assessment Screening Report and/or Natura Impact Statement, whichever is deemed relevant these should include an assessment of potential impacts upon water dependant QIs at all life stages (migration /spawning /juvenile /adult).</p> <p>4 Changes in Key Indicators of Conservation Value -Water Quality/Air</p> <p>Cloverhill stream_010 rises from Skeheen Lough a limestone/marl lake west of settlement and ultimately discharges to Lower River Shannon SAC and River Shannon & River Fergus Estuaries SPA 9km and 9.4km downstream. Potential connection via road drainage or WTP discharges.</p> <p>Yes</p> <p>Potential for impacts upon water quality during operational phase due to unattenuated runoff resulting in adverse effects upon European sites.</p> <p>Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites.</p> <p>Mitigation</p> <p>During operation appropriate SUDs shall be installed to treat surface water runoff prior to discharge to any surface water body (e.g., green roof, silt traps, petrol interceptors, permeable paving.).</p> <p>Appropriate wastewater treatment facilities shall be provided that can fully demonstrate that there will be no adverse effects upon water quality and European sites and compliance with mitigation for CDP11.32.</p> <p>5 Changes in Key Indicators of Conservation Value -Invasive Species</p> <p>No</p>

Parcels potentially connected to Inch (Clare)_010 water body via road drainage. This water body is connected to the Lower River Shannon SAC and River Shannon & River Fergus Estuaries SPA. Yes Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites. Mitigation Appropriate surface water management shall be installed during construction phase to ensure no direct discharges of unattenuated water enters any surface water body and European site. A Surface Water Management Plan shall be submitted as part of any planning application detailing how surface water run-off (including silt/hydrocarbons and other pollutants) shall be managed and controlled during construction.	No

Ennis	SR11	No Ennis 2040- AA completed. All plans/projects shall be in accordance with the mitigation set out within the Ennis 2040 SEA and NIS.	Although zones are Not within 3km Lesser horseshoe bat buffer., this species has been recorded within surrounding environs and Ennis town is almost surrounded by bat buffer zones. Following precautionary principal Ennis town is considered to support the surrounding adjacent SACs and hence mitigation for bats is stipulated. FS1 reed habitat 54m east and GS4 wet grassland 225m east. Yes Removal of hedgerows/treelines could potentially impact on the foraging / commuting / roosting habitat of Lesser horseshoe bats and /or further development could result in an increase in ambient light levels beyond the site boundary which could impact on foraging / commuting / roosting habitat of Lesser horseshoe bats. Potential disturbance/fragmentation of Annex I habitat should it be present. Mitigation	Yes Potential disturbance and/or habitat fragmentation identified in 2 which may result in decrease in QI species density Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs Mitigation Please see mitigation stipulated for 2 & 4a. In addition, development applications shall be accompanied by an Ecological Impact Assessment and Appropriate Assessment Screening Report and/or Natura Impact Statement, whichever is deemed relevant these should include an assessment of potential impacts upon water dependant QIs at all life stages	Rosslevan Turlough 550m west . Yes Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites. Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites. Mitigation Appropriate surface water management shall be installed during construction phase to ensure no direct discharges of unattenuated water enters any surface water body and European sites. A Surface Water Management Plan shall be submitted as part of any planning application detailing how surface water run-off (including silt/hydrocarbons and other pollutants) shall be managed and controlled during construction.	No
