Labasheeda	C1 -C4	No	Settlement located along boundary of the Lower River Shannon SAC and River Shannon & River Fergus SPA. All parcels within 150m of the SPA and SAC with C2 bordering these European sites. Existing development within the parcels however habitats adjacent to parcels have potential to support SCI birds or otter. Yes Potential impact upon SCI birds (feeding, nesting, roosting, resting habitats) through increased	Yes Potential disturbance identified in 2 which may result in decrease in QI/SCI species density. Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs Mitigation Please see mitigation stipulated for 2 & 4a.	Entire settlement located along the Shannon estuary and bounds the Lower River Shannon SAC and River Shannon & River Fergus SPA. Potential connectivity via road drainage or WWT discharges. C2 is adjacent to the estuary. Yes Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites. Potential for impacts upon water quality during operational phase as a result	No

Settlement	Zoning	1. Direct Loss / Reduction of European site habitat area	2.Habitat/Species Disturbance or Fragmentation	3. Reduction in Species Density	4a. Changes in Key Indicators of Conservation Value - Water Quality/Air	4b. Changes in Key Indicators of Conservation Value -Invasive Species
Doolin	AG1 -AG8, AG11 &2x uncoded AG	No	No Not within 3km Lesser horseshoe bat buffer.	Yes Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., pollutants can degrade water quality below requirements for SCIs/ QIs. Mitigation Please see mitigation stipulated for 4a.	Qualifying Interest of the European site. Aille Clare_020 water body flows through settlement and hydrologically connected to Black Head - Poulsallagh Complex SAC and Cliffs of Moher SPA. Karst groundwater body with a number of karst features within settlement (swallow hole, depressions). Black Head - Poulsallagh Complex SAC 1.2km north east (as crow flies) and has a QI which is a GWDTE (petrifying springs) Potential connectivity via groundwater, road or land drainage. Yes Potential for impacts to water quality as a result of unattenuated run-off of organic waste and/or nutrients resulting in adverse effects upon European sites. Potential for impacts on the hydrology of groundwater-dependent Qualifying Interests of European sites (e.g., turloughs, petrifying springs).	Japanese knotweed record within settlement AG3, AG4 and 1x uncoded parcel are 44 -55m from this record. Aille Clare_020 water body could potentially transport to downstream European sites. Yes There is potential for disturbance and spread within European site or to hydrologically connect downstream European sites. These sites have invasive species listed as negative indicator within Conservation Objectives for QI(s). Mitigation Any development application shall include an assessment of the site by a suitable qualified ecologist for the presence of invasive species. Should invasive be present the extent of infestation shall be mapped. The impact upon Conservation Objective of European sites shall be assessed and a management plan drawn up outlining how invasive species will be management

Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge	Japanese knotweed record within settlement Record is 170m from VGA1. Aille Clare_020 water body could potentially transport to downstream European sites. Yes There is potential for disturbance and spread within European site or to hydrologically connect downstream European sites. These sites have invasive species listed as negative indicator within Conservation Objectives for QI(s). Mitigation Any development application shall include an assessment of the site by a suitable qualified ecologist for the presence of invasive species. Should invasive be present the extent of infestation shall be mapped. The impact upon Conservation Objective of European sites shall be assessed and a management plan drawn up outlining how invasive species will be managed on site to prevent spread

			vegetation removal within the nesting season shall be supervised by a suitably qualified ecologist if deemed necessary.			
University of Limerick	Enterprise Following review this parcel boundary was reduced to exclude woodland areas.	No Small area of Lower River Shannon SAC intersects this zone, existing infrastructure here.	Not within 3km Lesser horseshoe bat buffer. Wet pedunculate oak ash woodland within zone potential to correspond with Annex I woodland habitat – parcel rezoned to exclude this habitat. Yes Potential otter habitat (feeding, resting, commuting and/or breeding habitat) present supporting the species ex-situ of an SAC or within the SAC. Construction and/or operational activities may result in disturbance to otter and/or permanent loss of habitat. Mitigation Any new development shall not restrict otter commuting routes along a water body and a minimum 10m buffer zone shall be located along each bank (where there is not already development). Any application shall be accompanied by an EclA, AA screening and/or NIS as	Yes Potential disturbance and/or habitat fragmentation identified in 2 which may result in decrease in QI/SCI species density Yes Potential disturbance and/or habitat fragmentation identified in 2 which may result in decrease in QI/SCI species density. Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs Mitigation Please see mitigation stipulated for 2 & 4a. In addition, development applications shall be	River Blackwater 44m east with lower section designated as the Lower River Shannon SAC and supports hydrological connectivity River Shannon and River Fergus Estuaries SPA. QI habitat Alluvial woodland is a GWDTE. Yes Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon the Lower River Shannon SAC/River Shannon River Fergus Estuaries SPA Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites. Potential for impacts on the hydrology of groundwater-dependent Qualifying Interests of European sites (Alluvial woodland)	Giant hogweed 118m east along the Blackwater River Yes There is potential for disturbance and spread within European site or to hydrologically connect downstream European sites. These sites have invasive species listed as negative indicator within Conservation Objectives for QI(s). Mitigation Any development application shall include an assessment of the site by a suitable qualified ecologist for the presence of invasive species. Should invasive be present the extent of infestation shall be mapped. The impact upon Conservation Objective of European sites shall be assessed and a management plan drawn up outlining how invasive species will be managed on site to prevent spread during construction and operation. An appropriately qualified invasive species specialist

					and concludes that the development will not interfere with groundwater movement to the groundwater dependent Qualifying Interest of the European site.	
University of Limerick	Buffer Space Following review this zoning was extended to include the adjacent woodland areas and amended to buffer zoning to promote protection of these habitats.	No	Not within 3km Lesser horseshoe bat buffer. Wet pedunculate oak ash woodland within zone potential to correspond with Annex I woodland habitat, now located in a buffer zone. Yes Potential otter habitat (feeding, resting, commuting and/or breeding habitat) present supporting the species ex-situ of an SAC or within the SAC. Construction and/or operational activities may result in disturbance to otter and/or permanent loss of habitat. Mitigation Any new development shall not restrict otter commuting routes along a water body and a minimum 10m buffer zone shall be located along each bank (where there is not already development).	Yes Potential disturbance and/or habitat fragmentation identified in 2 which may result in decrease in QI/SCI species density Yes Potential disturbance and/or habitat fragmentation identified in 2 which may result in decrease in QI/SCI species density. Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs Mitigation Please see mitigation stipulated for 2 & 4a.	Adjacent to Lower River Shannon SAC and supports hydrological connectivity River Shannon and River Fergus Estuaries SPA. QI habitat Alluvial woodland is a GWDTE. Yes Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon the Lower River Shannon SAC/River Shannon River Fergus Estuaries SPA Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites. Potential for impacts on the hydrology of groundwater-dependent Qualifying Interests of European sites (Alluvial woodland)	Giant hogweed record along northern boundary. Yes There is potential for disturbance and spread within European site or to hydrologically connect downstream European sites. These sites have invasive species listed as negative indicator within Conservation Objectives for QI(s). Potential for introduction or spread of aquatic/terrestrial invasive species to European sites via watercraft / other equipment and vectors that may be brought into the area due to a recreation or tourism. Mitigation Any development application shall include an assessment of the site by a suitable qualified ecologist for the presence of invasive species. Should invasive be present the extent of infestation shall be mapped. The impact upon
