			fragmentation (both in isolation and in combination with other plans/projects) upon the European site. Proposals that cannot avoid adverse effects upon European sites shall not be permitted.			
O'Briensbridge	AG1 & 1x uncoded AG	Part of uncoded ag boundary within Lower River Shannon SAC with existing development here. AG1 11-15m from the boundary separated by an open space. Potential Annex habitat present. Mitigation Any development proposal shall undergo the AA process (AA screening or NIS as deemed necessary) including habitat assessments. The proposal shall clearly identify the spatial extent of any development and shall address the potential for increased disturbance (both in isolation and in combination with other plans/projects) upon the European site. Proposals that cannot avoid adverse effects upon European sites shall not be permitted; or	Not within 3km Lesser horseshoe bat buffer. Adjacent or within Lower River Shannon SAC. Yes Potential otter habitat (feeding, resting, commuting and/or breeding habitat) present supporting the species ex-situ of an SAC or within the SAC. Construction and/or operational activities may result in disturbance to otter and/or permanent loss of habitat. Mitigation Any new development shall not restrict otter commuting routes along a water body and a minimum 10m buffer zone shall be located along each bank (where there is not already development).	Yes Potential disturbance and/or habitat fragmentation identified under criterion 2 which may result in decrease in QI species density Potential impacts to water quality were identified under criterion 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs. Mitigation Please see mitigation stipulated under criterion 2- Disturbance and or Habitat/Species Fragmentation.	Potential for impacts to water quality as a result of unattenuated run-off of organic waste and/or nutrients resulting in adverse effects upon European sites. Mitigation Appropriate wastewater treatment facilities shall be provided that can fully demonstrate that there will be no adverse effects upon water quality and European sites and compliance with mitigation for CDP11.32.	No

			process (AA screening or NIS as deemed necessary) The proposal shall clearly identify the spatial extent of any tourism activities and shall address the potential for impacts (both in isolation and in combination with other plans/projects) upon European sites. Proposals that cannot avoid adverse effects upon European sites shall not be permitted.			
Carrigaholt	TOU2, TOU4	No	Not within 3km Lesser horseshoe bat buffer. Existing development within zoned parcels. Yes Any further development/expansion in tourism in the area has the potential to result in direct/indirect disturbance to QI/SCI species within European sites (e.g., increased noise, visual disturbance) or result in fragmentation of Annex I habitats or supporting habitats to species (e.g., physical trampling) [At the strategic level of assessment it is not possible to clearly identify the scale or nature of	Yes Potential disturbance and/or habitat fragmentation identified under criterion 2 which may result in decrease in QI /SCI species density. Potential impacts to water quality were identified in 4a. Zoned parcel adjacent to Lower River Shannon SAC. Should impacts this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs	TOU4 65m from Moyana_010 river which is part of Lower River Shannon SAC with aquatic QIs. Potential for SCI birds to utilise this area also. Yes Potential for impacts upon water quality during operational phase due to unattenuated runoff resulting in adverse effects upon European sites. Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites. Mitigation	No

Settlement	Zoning	1. Direct Loss / Reduction of European site habitat area	2.Habitat/Species Disturbance or Fragmentation	3. Reduction in Species Density	4a. Changes in Key Indicators of Conservation Value - Water Quality/Air	4b. Changes in Key Indicators of Conservation Value -Invasive Species
			<p>(visual/physical, noise) to otter.</p> <p>Mitigation</p> <p>Any development applications shall include an assessment by a suitably qualified Ecologist as to the potential for the site to support SPA SCI bird species. If the site is deemed suitable, detailed bird surveys should be undertaken on the site to accompany the development application. These assessments and/or surveys should inform an Appropriate Assessment Screening Report and/or Natura Impact Statement, dependent on the outcome of the site survey. If the site is deemed suitable, a full lightspill modelling study should accompany all development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development applications and demonstrate that the chosen lighting design would not create any increase in</p>	<p>deemed relevant these should include an assessment of potential impacts upon water dependant QIs at all life stages (migration/spawning/ juvenile/adult).</p>	<p>water enters any surface water body and European sites. A Surface Water Management Plan shall be submitted as part of any planning application detailing how surface water run-off (including silt/hydrocarbons and other pollutants) shall be managed and controlled during construction.</p> <p>During operation appropriate SUDs shall be installed to treat surface water runoff prior to discharge to any surface water body (e.g., green roof, silt traps, petrol interceptors, permeable paving.).</p> <p>Appropriate wastewater treatment facilities shall be provided that can fully demonstrate that there will be no adverse effects upon water quality and European sites and compliance with mitigation for CDP11.32.</p>
