1 INTRODUCTION

1.1 Background

Clare County Council (CCC) is currently preparing a new County Development Plan 2023-2029 (hereafter referred to as the CCDP 2023-2029) under Sections 11 and 12 of the Planning and Development Act 2000 (as amended).

Screening for Appropriate Assessment of the draft CCDP 2023-2029 was undertaken by CCC in November 2020 which determined that a Natura Impact Report (NIR) was required.

Following this it was proposed to include a Renewable Energy Strategy (RES) within the CCDP and a further Screening for AA was undertaken by RPS in 2021 which comprised of the draft CCDP 2023-2029 and the draft Renewable Energy Strategy. It was concluded that

- It cannot be excluded on the basis of objective information that the draft Clare CDP (including the RES) individually or in combination with other plans and projects will have a significant effect on European site(s). Therefore, the AA process should proceed to preparation of a Natura Impact Report (NIR).

This NIR has been prepared in support of the AA process having regard for the legislative requirements of EU and national law. A NIR, as described in under 177T of the Planning and Development Act 2000 (as amended) as follows:

177T.— (1) In this Part—

(a) A Natura impact report means a statement for the purposes of Article 6 of the Habitats Directive, of the implications of a Land use plan, on its own or in combination with other plans or projects, for one or more than one European site, in view of the conservation objectives of the site or sites.

The next step in the CCDP process was public consultation on the CCDP, the accompanying SEA Environmental Report and the NIR. This was followed by the preparation of the chief executive's resolution booklet and any material amendments to the plan. A further public consultation was conducted on the proposed amendments to the CCDP. As part of the NIR process the resolution booklet and any amendments to the CCDP were reviewed and incorporated into the NIR assessment. The results of this process is recorded separately in Section 15.

The NIR will assess, in view of best scientific knowledge and applying the precautionary principle, whether the Plan (including the RES), either individually or in combination with other plans or projects, may adversely affect the integrity of any European site(s) alone or in combination with other plans and projects.

1.2 Legislative Context

Council Directive 92/43/EEC on the Conservation of Natural Habitats and of Wild Fauna and Flora, better known as "The Habitats Directive", provides legal protection for habitats and species of European importance. Articles 3 to 9 provide the legislative means to protect habitats and species of Community Interest through the establishment and conservation of an EU-wide network of sites known as the Natura 2000 Network. In Ireland, the Natura 2000 network of European sites comprise Special Areas of Conservation (SACs) designated under the Habitats Directive (92/43/EEC) and Special Protection Areas (SPAs) designated under the Conservation of Wild Birds Directive (79/409/EEC) as codified by Directive 2009/147/EC (hereafter referred to as the Birds Directive).

Articles 6(3) and 6(4) of the Habitats Directive set out the decision-making tests for plans and projects likely to affect European sites (Annex 1.1). Article 6(3) establishes the requirement for AA:

Any plan or project not directly connected with or necessary to the management of the [European] site but likely to have a significant effect thereon, either individually or in combination with other plans or projects, shall be subjected to appropriate assessment of its implications for the site in view of the site's conservation objectives. In light of the conclusions of the assessment of the implications for the site and subject to the provisions of paragraph 4, the competent national authorities shall

NATURA IMPACT REPORT

agree to the plan or project only after having ascertained that it will not adversely affect the integrity of the site concerned and, if appropriate, after having obtained the opinion of the general public.

Article 6(4) states:

If, in spite of a negative assessment of the implications for the [European] site and in the absence of alternative solutions, a plan or project must nevertheless be carried out for imperative reasons of overriding public interest, including those of a social or economic nature, Member States shall take all compensatory measures necessary to ensure that the overall coherence of Natura 2000 is protected. It shall inform the Commission of the compensatory measures adopted.

The Habitats Directive has been transposed into Irish law by the Planning and Development Act 2000 (as amended) and the European Communities (Birds and Natural Habitats) Regulations 2011 (as amended). In the context of the CDP, the governing legislation is principally Part XAB of the Planning and Development Act 2000, as amended. Regulation 27 of the Birds and Natural Habitats Regulations also has relevance as which sets out the general duties of public authorities in relation to the nature directives and nature conservation

1.3 Statement of Authority

Discipline	Competency Details
NIR Preparation	<p>Dr Letizia Cocchiglia, BSc (Hons), PhD</p> <p>This report has been prepared by Dr Letizia Cocchiglia. She holds a BSc (Hons) in Environmental Science and a PhD in Freshwater Biology. Dr Cocchiglia is the owner and principal ecologist for Mayfly Ecology which she set up following six years as Principal Ecologist in RPS which included working with the EPA Environmental Monitoring and Assessment Unit supporting the implementation of WFD monitoring programme. Letizia has prepared documentation to inform AA Screening /NIS and reporting to inform assessments of plans and projects in accordance Articles 6(3) of the Habitats Directive and presented evidence at oral hearing. Letizia was supported in preparation of the NIR by a number of qualified ecologists.</p>

2 ASSESSMENT METHODOLOGY

2.1 Guidance Documents on AA

The AA requirements of Article 6 of the Habitats Directive follow the approach as outlined in the following legislation, guidance documents and Departmental Circulars, namely:

European and National Legislation

- Council Directive 2009/147/EC on the conservation of wild birds, codified version, (also known as the 'Birds Directive');
- Council Directive 92/43/EEC on the conservation of natural habitats and of wild fauna and flora (also known as the 'Habitats Directive');
- European Communities (Birds and Natural Habitats) Regulations 2011 (as amended); and
- Planning and Development Act 2000 (as amended).

European and National Guidance

- CIEEM (2018). *Guidelines for Ecological Impact Assessment in the UK and Ireland*. Chartered Institute of Ecology and Environmental Management;
- DoEHLG (2009, rev. 2010). *Appropriate Assessment of Plans and Projects in Ireland Guidance for Planning Authorities*. Department of the Environment, Heritage and Local Government;
- EC (2000). *Communication from the Commission on the Precautionary Principle*, European Commission;
- EC (2001). *Assessment of Plans and Projects Significantly Affecting Natura 2000 sites: Methodological Guidance on the Provisions of Article 6(3) and (4) of the Habitats Directive 92/43/EEC*, European Commission;
- EC (2007). *Guidance Document on Article 6(4) of the 'Habitats Directive' 92/43/EEC. Clarification of the concepts of: Alternative Solutions, Imperative Reasons of Overriding Public Interest, Compensatory Measures, Overall Coherence, Opinion of the Commission*, European Commission (2007);
- EC (2007b). *Guidance document on the strict protection of animal species of Community interest under the Habitats Directive 92/43/EEC*. European Commission, Luxembourg;
- EC (2013). *Interpretation Manual of European Union Habitats*. Version EUR 28. European Commission, Luxembourg;
- EC (2013b). *EC study on evaluating and improving permitting procedures related to Natura 2000 requirements under Article 6.3 of the Habitats Directive 92/43/EEC*, European Commission.
- EC (2018) *Managing Natura 2000 Sites: the provisions of Article 6 of the 'Habitats' Directive 92/43/EEC¹*, Office for Official Publications of the European Communities, Luxembourg. European Commission;
- EC (2021), *Assessment of Plans and Projects in Relation to Natura 2000 Sites: Methodological guidance on Article 6(3) and (4) of the Habitats Directive 92/43/EEC*. C(2021)6913. European Commission, Brussels.
- NPWS (2013). *Ireland's Summary Report for the period 2008 – 2012 under Article 12 of the Birds Directive*. National Parks and Wildlife Services. Department of Arts, Heritage and the Gaeltacht Dublin, Ireland;

¹ The Commission has notified its intent to revise this guidance and a draft revised document was published in April 2015. It would appear that this has not been finalised to date, and no revised guidance document is available on the Commissions official website to date.

NATURA IMPACT REPORT

- NPWS (2019). *The Status of EU Protected Habitats and Species in Ireland. Habitat Assessments* Volume 2. Version 1.0. Unpublished Report, National Parks and Wildlife Services. Department of Arts, Heritage and the Gaeltacht, Dublin, Ireland;
- NPWS (2019). *The Status of EU Protected Habitats and Species in Ireland. Species Assessments* Volume 3, Version 1.0. Unpublished Report, National Parks and Wildlife Services. Department of Arts, Heritage and the Gaeltacht, Dublin, Ireland; and
- OPR (2021). *Appropriate Assessment Screening for Development Management*. OPR Practice Note PN01. Office of the Planning Regulator, Dublin.

Irish Government Department / NPWS Circulars

- *Appropriate Assessment under Article 6 of the Habitats Directive: Guidance for Planning Authorities*. Circular NPWS 1/10 and PSSP 2/10. (DEHLG, 2010);
- *Appropriate Assessment of Land Use Plans*. Circular Letter SEA 1/08 & NPWS 1/08;
- *Guidance on Compliance with Regulation 23 of the Habitats Directive*. Circular Letter NPWS 2/07; and
- *Compliance Conditions in respect of Developments requiring (1) Environmental Impact Assessment (EIA); or (2) having potential impacts on Natura 2000 sites*. Circular Letter PD 2/07 and NPWS 1/07.

2.2 Guiding Principles and Case Law

Over time legal interpretation has been sought on the practical application of the legislation concerning AA as some terminology has been found to be unclear. European and national case law has clarified a number of issues and some aspects of the published guidance documents have been superseded by case law. Case law has been considered in the preparation of the NIR of the CDP.

2.3 Sources of Information Consulted

- Environmental Protection Agency (EPA) online interactive mapping tools (<https://gis.epa.ie/EPAMaps>) and (<https://www.catchments.ie/maps/>) for water quality data including surface and ground water quality status, and river catchment boundaries;
- Information on ranges of mobile QI populations in Volume 1 of NPWS' *Status of EU Protected Habitats and Species in Ireland* (NPWS, 2019a), and associated digital shapefiles obtained from the NPWS Research Branch;
- Information on ranges of mobile SCIs bird populations from Bird Atlas 2007–11 (Balmer *et al.*, 2013), excluding birds of prey whose ranges were determined with reference to Hardey *et al.* (2013);
- Birdwatch Ireland (<https://birdwatchireland.ie/>)
- Mapping of European site boundaries and Conservation Objectives for relevant sites available online from the NPWS (<https://www.npws.ie/protected-sites>);
- Distribution records for QI and SCI species of European sites held online by the National Biodiversity Data Centre (NBDC). Including records of 'Third Schedule' invasive species www.biodiversityireland.ie;
- Details of QIs/SCIs of European sites within the County Clare Biodiversity Action Plan 2017-2023 (CCC, 2017);
- Geohive online Environmental Sensitivity Mapping tool (<https://airomaps.geohive.ie/ESM/>);
- National and regional surveys of semi-natural habitats, including grasslands (O'Neill *et al.*, 2013), saltmarsh (McCorry and Ryle, 2009; Devaney and Perrin, 2015), and woodland (Perrin *et al.*, 2008);
- Boundaries for catchments with confirmed or potential freshwater pearl mussel (FWPM) *Margaritifera* populations in GIS format available online from the NPWS;
- Inland Fisheries Ireland mapping of WFD fish survey results <http://wfdfish.ie/>;
- Geological Survey Ireland (GSI) (<https://www.gsi.ie/en-ie/Pages/default.aspx>); and
- Any local surveys of flora, fauna and habitat available using the Heritage Councils mapping website (<https://heritagemaps.ie/WebApps/HeritageMaps/index.html>)

NATURA IMPACT REPORT

2.4 Appropriate Assessment Purpose and Process and Overlap with the Strategic Environmental Assessment of the CDP

The Strategic Environmental Assessment (SEA) of the CCDP 2023-2029 was carried out concurrently with the AA. Both the AA and SEA process have been managed by the RPS on behalf of Clare County Council. The SEA process has been taken into account in the AA process - Interaction has been ongoing between RPS and Clare County Council since the early stages of the plan development.

The screening of the strategic objectives and thereafter the assessment of objectives in the context of mitigation measures and potential impacts upon European sites is an iterative process throughout each stage of the plan development. This has enabled the importance of protection of the European sites within Clare and beyond (collectively known as the zone of influence) to be reinforced in the CCDP and to identify solutions to specific policies/objectives to avoid adverse effects upon these sites.

There were several areas of overlap between the SEA and AA processes. In accordance with good practice sharing of data and information occurred in terms of the following stages:

- Sharing of baseline data,
- Sharing data on European sites and potential sensitivities and threats.
- Settlement zoning maps were scrutinized by the AA team for potential adverse effects on integrity of the European sites in terms of their Conservation Objectives but also any other ecological impacts outside of the European sites were highlighted to the SEA team for them to address in the SEA process

The SEA team was able to highlight potential interactions between other environmental issues such as water quality and infrastructure and the sensitivities of European sites to the AA team.

Figure 2-1 shows the key steps required to complete the statutory AA and SEA process in accordance with the relevant national legislation.

Figure 2-1: Overview of AA and SEA Process and integration with CCDP.

2.5 Consultation

As part of the SEA process, and by association, consultation took place with a range of bodies including EPA, Department of Tourism, Culture, Arts, Gaeltacht, Sports and Media, Department of Environment,

NATURA IMPACT REPORT

Climate and Communications, the Department of Agriculture, Food and the Marine (DAFM) and neighbouring local authorities. Responses received during the SEA scoping and subsequent consultation of the CCDP have informed the content and scope of the NIR.

A Scoping workshop with the NPWS took place on the 22nd June 2021. This was early-stage consultation to discuss the general approach to the environmental assessment of the draft CCDP for the NIR.

2.6 Criteria used for Assessment of Impacts

The methodology for the assessment of impacts is derived from the *Assessment of Plans and Projects Significantly Affecting Natura 2000 Sites* (EC, 2002)²². When describing changes/activities and impacts on ecosystem structure and function, the types of impacts that are commonly presented include:

- direct and indirect effects;
- short- and long-term effects;
- construction, operational and decommissioning effects; and
- isolated, interactive and cumulative effects.

Impacts that could potentially occur through the implementation of the project can be categorised under a number of impact categories as outlined in the EC (2002) document as follows:

1. Direct Loss/Reduction of European Site Habitat Area;

Will there be a risk of direct habitat loss to European sites?

2. Habitat/Species Disturbance or Fragmentation;

Will there be a risk of direct or indirect disturbance to European Site species? Disturbance can be caused by factors such as noise/lighting/vibration or human presence during both construction and operation.

County Clare is a particular stronghold for Irelands only Annex II bat species, the lesser horseshoe bat. Seventeen of the 41 SACs which designate this species as a QI are located within County Clare and two are adjacent to the county boundary. Developments can potentially impact upon foraging areas, roosts or commuting corridors used by this species. Given the importance County Clare holds for lesser horseshoe, this criterion also considers the proximity of development to SACs with lesser horseshoe designated as a QI.

Research carried out on this species has suggested that the key zone for foraging exist up to 3km from roosts during the year (Billington and Rawlinson 2006). This distance can reduce down to under 1km during the birthing season (Biggane 2003). At a greater distance of 3-7km this zone is likely to be important for some larger colonies of a few hundred bats (Billington and Rawlinson 2006). Occasional foraging has been recorded 4.2km from the roost (Bontadina et al 2002) whilst larger scale movements of up to 10km has been recorded for foraging bats and may form connections between summer and winter roost sites (Billington and Rawlinson 2006).

Within the previous NIR for the CCDP a precautionary 6km buffer was identified around European sites with lesser horseshoe as a QI. Since then, additional research has been conducted and habitat mapping undertaken by NPWS for European sites.

In 2016, the Bat Conservation Trust carried out a review of literature and identified Core Sustenance Zone (CSZ) for lesser horseshoe bats (BCT 2016). The CSZ refers to the area surrounding a communal bat roost within which habitat availability and quality will have a significant influence on the resilience and conservation status of the colony using the roost. A 2.5km buffer zone was identified based on Schofield 2008 and forms the basis of the Conservation Objective Supporting document for lesser horseshoe bat for Irish European sites (NPWS 2018). For each roost a 2.5km zone is set within the site-specific conservation objective. The target stipulates there should be; no significant decline in potential foraging habitat; no significant loss of linear features and no significant increase in artificial light adjacent to or along commuting routes within 2.5km of qualifying roosts.

In order to assess any potential adverse effects a ZoI was identified and a precautionary value of 3km was applied. In addition, available mapped foraging habitat was also assessed.

NATURA IMPACT REPORT

In addition, it is also assessed whether there will be a risk of the loss of ecological networks supporting European sites. For example, habitat fragmentation can isolate QI/SCI populations reducing fitness or preventing access to critical resources.

3. Reduction in Species Density;

Will there be a risk of a reduction in species density? This may be as a result of direct disturbance to species, fragmentation of supporting habitat or degradation in the quality of habitat such as water pollution.

4a. Changes in Key Indicators of Conservation Value – Water Quality and Air Quality

Is there a hydrological or hydrogeological link to European sites Are there any potential impacts to surface, ground or coastal water quality? Is there a risk to High Status or High-Status Objective sites?

Is there an industrial air emission which may be linked with European sites?

4b. Changes in Key Indicators of Conservation Value – Invasive Species

Is there a risk of invasive species spread to European sites which have invasive species listed as negative indicator within Conservation Objectives? Waterways and roadways in particular offer linear pathways facilitating the spread of invasive species to connected European sites. **Appendix A** identifies which Qualifying Interests, attributes and targets are covered by these assessment criteria.

2.7 How Appropriate Assessment was Undertaken for the CCDP

Table 2-1 below list each volume within the CCDP and the approach taken in this NIR for the assessment of each volume

Table 2-1 List of Volumes within the CCDP and approach to the NIR assessment for each

Volume	Assessed in the NIR
Volume 1 Written Statement	In total there are 20 chapters within Volume 1 including an introductory chapter. Where strategic objectives are stipulated within Volume 1, they were reviewed by the AA team for any adverse effects on integrity of European sites identified and highlighted to the CCDP authors. The AA team briefed the CCDP authors on the need to avoid certain objectives that could give rise to adverse effects. In cases where site specific impacts could not be accurately predicted and it would depend on where and how the objective was applied the text was revised to reinforce the need to carry out AA at lower, site-specific levels in the planning hierarchy.
Volume 2 Maps	Maps were reviewed to analyses any map-based proposals that had geographic specificity that could be assessed as posing adverse effects on integrity of European sites. The maps were utilised to inform the assessment of other volumes but not subjected to AA process themselves.
Volume 3 District Statements	Each of the settlements were taken in turn and the proposed zonings of land parcels were analysed using GIS data to obtain baseline data on the locations. Data included the following: <ul style="list-style-type: none"> • Aerial Photography • Invasive species records • Habitats types • Species data sets • Lesser Horseshoe bat roosts • European site boundary data • Water quality data including catchment boundaries • Karst features • Freshwater Pearl Mussel sensitive areas

NATURA IMPACT REPORT

Volume	Assessed in the NIR
	<p>Each zoning was then assessed to determine if it would pose an adverse effect on site integrity in terms of the site's Conservation Objectives using criteria noted in Section 2.6 above. Where adverse effects were identified then appropriate and proportional mitigation measures were applied.</p> <p>In some cases, it was felt that adverse effects would be likely and mitigation measures could not be proposed with sufficient confidence of their success at this stage. In all such cases the zoning parcel was removed or significantly amended to provide buffer zones which could attenuate any off-site impacts.</p>
Volume 4 Protected Structures	As this volume is a list of protected structures with no objectives/ statement of intentions it is considered that there is no potential for adverse effects to occur and no mitigation is required. This volume is therefore not discussed further. Any objectives relating to Protected Structures are assessed in Appendix B and any updates to these objectives in Appendix D .
Volume 5 Renewable Energy Strategy	This volume was subject to assessment and the mitigation recommended for inclusion in the RES are set out in Section 9 of this report.
Volume 6 Wind Energy Strategy	The WES is incorporated within the CCDP based upon the previous WES without any material changes to the proposals within it. It has undergone its own Appropriate Assessment as part of its incorporation into the adopted CCDP 2017-2023. It is expected that the WES will be revised when guidance on wind energy development is published by central Government but as an interim measure the current WES is included within the CCDP and the mitigation measures that have been proposed as part of the AA of the WES have been checked against the other elements of the CCDP to check for consistency. Therefore, this NIR addresses the impacts of the WES in combination with the rest of the CCDP and references the requirements of the WES and the inherent mitigation measures where relevant to the current assessment. Any revisions to the WES in the future will be subject to a separate assessment.
Volume 7 Retail Strategy	This strategy has been revised due to change in time period in the new plan 2023- 2029. It has not undergone a specific AA of its own but has been analysed as part of the NIR of the CCDP. Any updates to the objectives have been assessed in the NIR.
Volume 8 Housing Strategy	This strategy has been revised due to change in time period in the new plan 2023- 2029. It has not undergone a specific AA of its own but has been analysed as part of the NIR of the CCDP. Any updates to the objectives have been assessed in the NIR.
Volume 9 Strategic Integrated Planning Framework	The SIFP has undergone its own AA during its preparation (NIR published in November 2013) and also during integration of the SIFP into the adopted CCDP 2011 – 2017 as adopted Variation No. 2 (NIR published in November 2014). The current NIR does not re-assess the SIFP but does analyse the proposals and mitigation measures for any conflicts in combination with the rest of the CCDP. The AA of the SIFP is therefore referred to in the current assessment where relevant.
Volume 10 Environmental Assessments	This volume will contain the various environmental reports completed during the assessment of the CCDP e.g., AA Screening, NIR, SEA scoping. It is therefore not subjected to assessment in this NIR.

3 OVERVIEW OF THE CLARE COUNTY DEVELOPMENT PLAN (2023-2029)

3.1 Background to the Clare County Development Plan

The Government recently published Project Ireland 2040 which is comprised of the National Planning Framework (NPF) and the National Development Plan 2018-2027. Clare now forms part of the Southern Regional Assembly with the Regional Spatial and Economic Strategy (RSES) coming into effect on the 31st January 2020. This included the Limerick-Shannon Metropolitan Area which encompasses Shannon as a key town and will accommodate significant job and population increases within the lifetime of the new CCDP 2023-2029.

Figure 3.1 illustrates the position of the Development Plan in the Irish Planning Hierarchy. The NPF and the RSES contain higher level policy and objectives which will in turn steer the development of County Clare at a lower level and it will be necessary to show evidence of adherence to these plans as part of the CCDP.

Figure 3-1: Irish Planning System Hierarchy

In accordance with Section 11 of the Planning and Development Act, 2000 (as amended) a planning authority is legally obliged to prepare a Development Plan (County Development Plan) for its functional area every six years. However, section 11(AB) of the same Act states that '*the council shall, not later than 4 years (or such longer period, not exceeding 5 years, as the Minister may specify by order) after making of a development plan give notice of its intention to review its existing development plan and to prepare a new development plan for its area*'. Section 11 (1) (b) of the Planning and Development Act 2000 as amended sets out additional legislative provisions for the initiation of the review of County Development Plans to enable the incorporation of the National Planning Framework and the Regional Spatial and Economic Strategy into a development plan:

(i) where notice of a development plan review to be given is prior to the making of the relevant regional spatial and economic strategy, then notice of the review shall be deferred until not later than 13 weeks after the relevant regional spatial and economic strategy has been made,

(ii) where a development plan review has commenced and a draft plan has not been submitted to the members of the planning authority concerned in accordance with subsection (5) (a) prior to the making of the relevant regional spatial and economic strategy, then the review process shall be suspended until not later than 13 weeks after the making of the relevant regional spatial

NATURA IMPACT REPORT

and economic strategy,

(iii) where notice of a development plan review to be given would be more than the period of 26 weeks after the making of the relevant regional spatial and economic strategy, then each planning authority concerned shall, within that period, either —

- (I) give notice of a development plan variation in accordance with section 13, or
- (II) give notice of a development plan review.

Section 11 (1) (b) (iii) (II) is of relevance to Clare County Council as the current Development Plan was adopted in December 2016 and a review had not commenced before the adoption of the Regional Spatial and Economic Strategy for the Southern Region (RSES) on the 31st January 2020. Therefore, the review process for the CCDP 2023-2029 commenced on the 18th of September 2020 with the publication of the Strategic Issues Paper.

Section 11 (1) (b) (iii) (II) is of relevance to Clare County Council as the current Development Plan was adopted in December 2016 and a review had not commenced before the adoption of the Regional Spatial and Economic Strategy for the Southern Region (RSES) on the 31st January 2020. Therefore, the review process for the CCDP 2023-2029 commenced on the 18th of September 2020 with the publication of the Strategic Issues Paper.

3.2 Background to the Renewable Energy Strategy

Article 4 of the 2009 RES Directive required Ireland to adopt a **National Renewable Energy Action Plan (NREAP)**. Ireland's plan was submitted to the Commission in 2010 and established that the 16% RES target in 2020 would be delivered by achieving three modal targets as follows:

- 40% renewable share of electricity use (RES-E);
- 12% share of renewable heat (RES-H); and
- 10% renewable share of transport energy (RES-T).

The Renewable Energy Strategy (RES) will comprise an update of the existing RES which was prepared in 2015 and adopted by CCC in 2017. The strategy will outline the renewable energy resource that is deliverable in County Clare. Its vision, consistent with that of the CCDP 2023-2029, is:

'A County Clare that is the national leader in renewable energy generation which supports energy efficiency and conservation with an accessible modern telecommunications infrastructure which achieves balanced social and economic development throughout the County and assists Ireland's Green Energy target.'

The RES will set out the renewable energy resource targets for County Clare. It outlines the potential for a range of renewable resources, including Bioenergy (Biomass) and Anaerobic Digestion, Micro Renewables, Geothermal & Ground Source Heat Pump, Solar, Onshore Wind, Marine Renewables (Wave and Tidal Energy) and Micro Hydroelectric including storage. It acknowledges the significant contribution such renewables can make to County Clare, becoming more energy secure and less reliant on traditional fossil fuels, thus enabling future energy export and meeting assigned targets.

The Draft RES also recognises the importance of the infrastructure in County Clare including road, electricity, gas and broadband networks, airport, ports and the Shannon Estuary, both in supporting the development of renewables and enabling a competitive supply chain economy.

The strategic aims of the RES are:

- (a) To support the attainment of and to exceed in County Clare, where possible, the National targets and commitments to renewable energy.
- (b) To identify/highlight the opportunities for various renewable energy technologies and resources and identify broad areas suitable for their development in full compliance with the requirements of all

NATURA IMPACT REPORT

environmental legislation including the requirements of the Strategic Environmental Assessment Directive, Habitats Directive and Water Framework Directive.

- (c) To provide an evidence-based strategy founded on understanding the local feasibility and potential for renewable and low carbon technology, predicated upon optimising the County's natural and socio economic, advantages and key assets, core skills, and nearby research institutes.
- (d) To maximise the opportunities for renewable energy development whilst safeguarding the environment and existing residential amenities.
- (e) To safeguard, where appropriate, areas with potential for renewable energy projects and to guide renewable energy development to preferred locations.
- (f) To set out policies and objectives for the main renewable sectors subject to Strategic Environmental Assessment (SEA) and Habitats Directive Assessment (HDA) requirements.
- (g) To provide guidance on energy efficiency and conservation.
- (h) To provide a clear development management framework.

4 OVERVIEW OF THE RECEIVING ENVIRONMENT

4.1 Overview of Study Area

County Clare is situated on the west coast of Ireland, bordered by the Atlantic Ocean to the west, the Shannon Estuary to the south, Lough Derg to the east and Galway Bay to the north. The County has a diverse topography varying from limestone pavement, to the extensive upland forested areas, estuarial mudflats, high Atlantic cliffs, inland lakes and waterways and fertile plains. Much of the County is underlain with limestone which is highly permeable. Habitats and species of particular note within the County include: limestone pavements, associated orchid and calcareous species rich grassland, estuarine habitats, turloughs, Lesser Horseshoe bats, Barnacle Geese and the Bottlenose Dolphin. The CCDP covers an area of 344,871 ha, with a coastline of 500km in length. The County has a population of 118,817 (CSO, 2016). Ennis is the County town and largest settlement with a population of approximately 25,276 (in 2016). It is designated as a “Key Town” in the Regional Spatial and Economic Strategy for the Southern Region, and as the County Town for Clare is an important residential, service and commercial centre providing significant levels of employment.

Shannon Town was developed from the 1960’s onwards in response to the growth and development of Shannon Airport and the Shannon Free Zone Industrial Estate and in 2016 had a population of 9,729 people. It is a world leader in aviation, manufacturing and distribution, occupies a strategic position to the west of Ireland, is a centre of international business, has strong synergies with Limerick City, Ennis and the wider Region and is central to delivering the ambition for the Limerick-Shannon Metropolitan Area’s economic, social diversity and tourism development

There are three service towns within Clare, Kilrush, Ennistymon/ Lahinch and Scariff/ Tuamgraney, which have been designated for their role as an important service centre and driver of growth. To the lower end of the settlement hierarchy are small towns, large villages, small villages, clusters and then the countryside. It has a well-developed road and rail infrastructure, an International Airport and a network of villages and large towns. It has a strong industrial base and is in close proximity to the cities of Limerick and Galway.

Clare County forms an area of some 324,000 hectares. A large proportion of the county boundary is comprised of Atlantic coastline, with the Shannon Estuary, which is located on the southern boundary forming the largest estuarine complex in Ireland. Clare has a varied morphology, ranging from steep coastal cliffs to estuaries and limestone pavement, the latter of which is home to the Burren - an important scenic landscape and tourist attraction. The study area for the CCDP comprises the entire county of Clare, including its coastline and adjacent waters. A map of County Clare is shown below in **Figure 4-1**

The baseline Biodiversity, Flora and Fauna, Water and Soils and Geology are described in detail in Chapter 5 of the SEA of the CCDP.

NATURA IMPACT REPORT

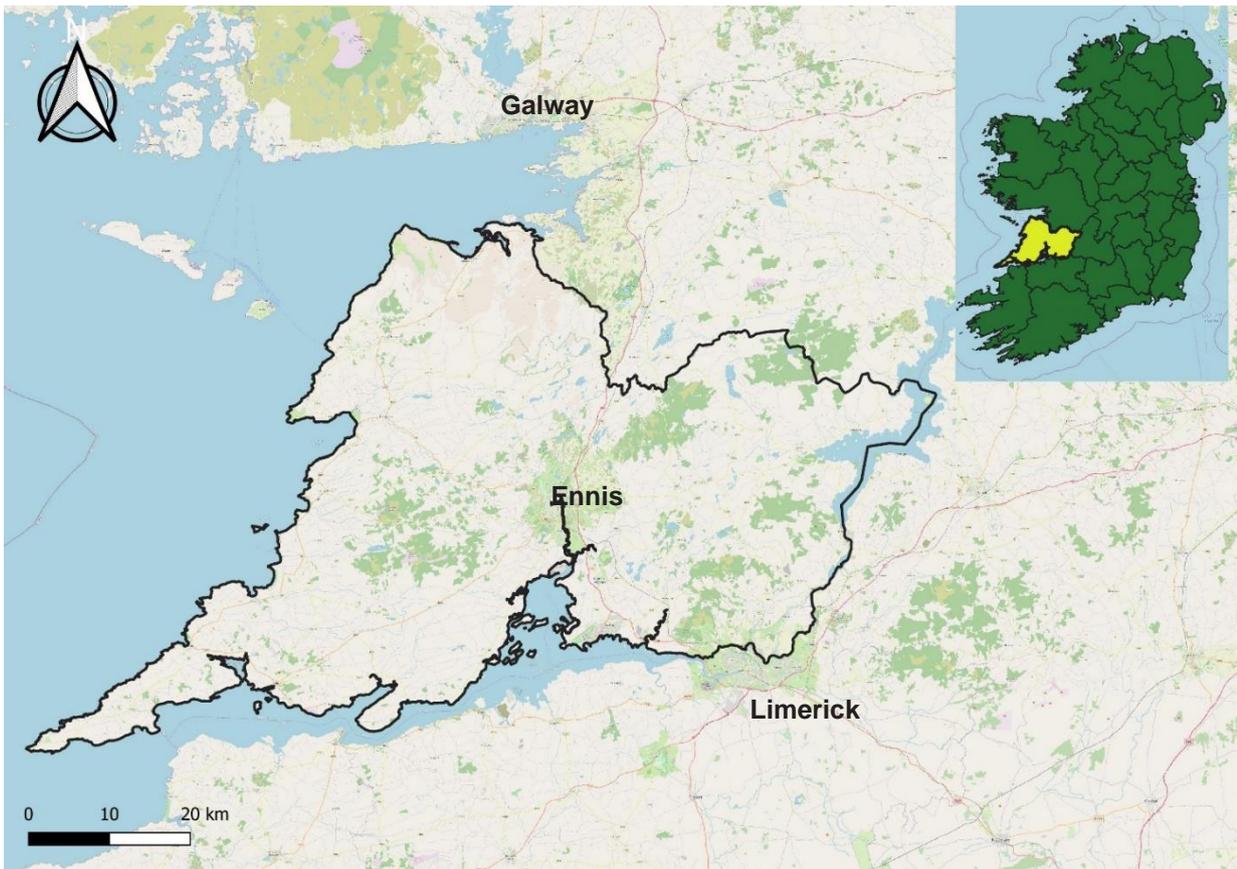

Figure 4-1: Map of County Clare

4.2 Zone of Influence of the Plan

In the Republic of Ireland, sites within the Natura 2000 Network are referred to as European sites and comprise Special Areas of Conservation (SAC) and Special Protection Areas (SPA). SACs are concerned with the protection of specific Qualifying Interests (QI) and SPA are concerned with the protection of specific Special Conservation Interests (SCI).

The Zone of Influence (Zol) of the CCDP is the geographical area over which it could affect the receiving environment in a way that could have significant effects on the QIs/SCIs of a European site.

When defining the Zol the Office of the Planning Regulator guidance notes “*This should be established on a case-by-case basis using the Source-Pathway-Receptor framework and not by arbitrary distances (such as 15 km)*” (OPR, 2021).

The Zol for this assessment was established following the source-pathway- receptor model. This method minimises the risk of overlooking distant or obscure effect pathways, while avoiding reliance on buffer zones (e.g., 15km), within which all European sites should be considered.

The Zol of the CCDP on mobile species (e.g., birds, mammals, and fish), and static species and habitats (e.g. saltmarshes, woodlands, and flora) is considered differently. Mobile species have ‘range’ outside of the European site in which they are QI/SCI. The range of mobile QI/SCI species varies considerably, from several metres (e.g., in the case of whorl snails *Vertigo* spp.), to hundreds of kilometres (in the case of migratory wetland birds).

Hydrological, hydrogeological and aerial linkages to European site (and their QIs/SCIs) can occur over significant distances. For example, a pollution event can impact an aquatic QI species such as the Atlantic salmon many kilometres downstream of the source of pollution. These long-distance pathways for potential impacts have also been taken into consideration during the assessment. Any effect will be site specific depending on the receiving environment, nature of the linkage and consequent nature of the potential impact.

NATURA IMPACT REPORT

The Zol was therefore combined to capture all European sites for which potential source – pathway – receptor for impacts exists and includes a review of terrestrial, hydrological, hydrogeological and aerial connectivity.

The total number of European sites which were deemed to be within the Zone of Influence of the potential implications of the CCDP are listed in **Table 4-1** below, and presented in **Figure 4-2** and **Figure 4-3**. Spatial boundary data for the European site network used was the most up to date available at the time of writing (April 2023). An inventory of all these European sites is listed in **Appendix A**.

The Zol encompasses European sites within County Clare boundary, island/marine European sites as well as transboundary or adjacent sites to the county. This Zol was deemed to be sufficient to cover all potential adverse effects which may arise from the implementation of the CCDP on European sites.

Table 4-1: Number of European sites within the Zol of the CCDP

European sites within the Zol
78 SACs
20 SPAs

NATURA IMPACT REPORT

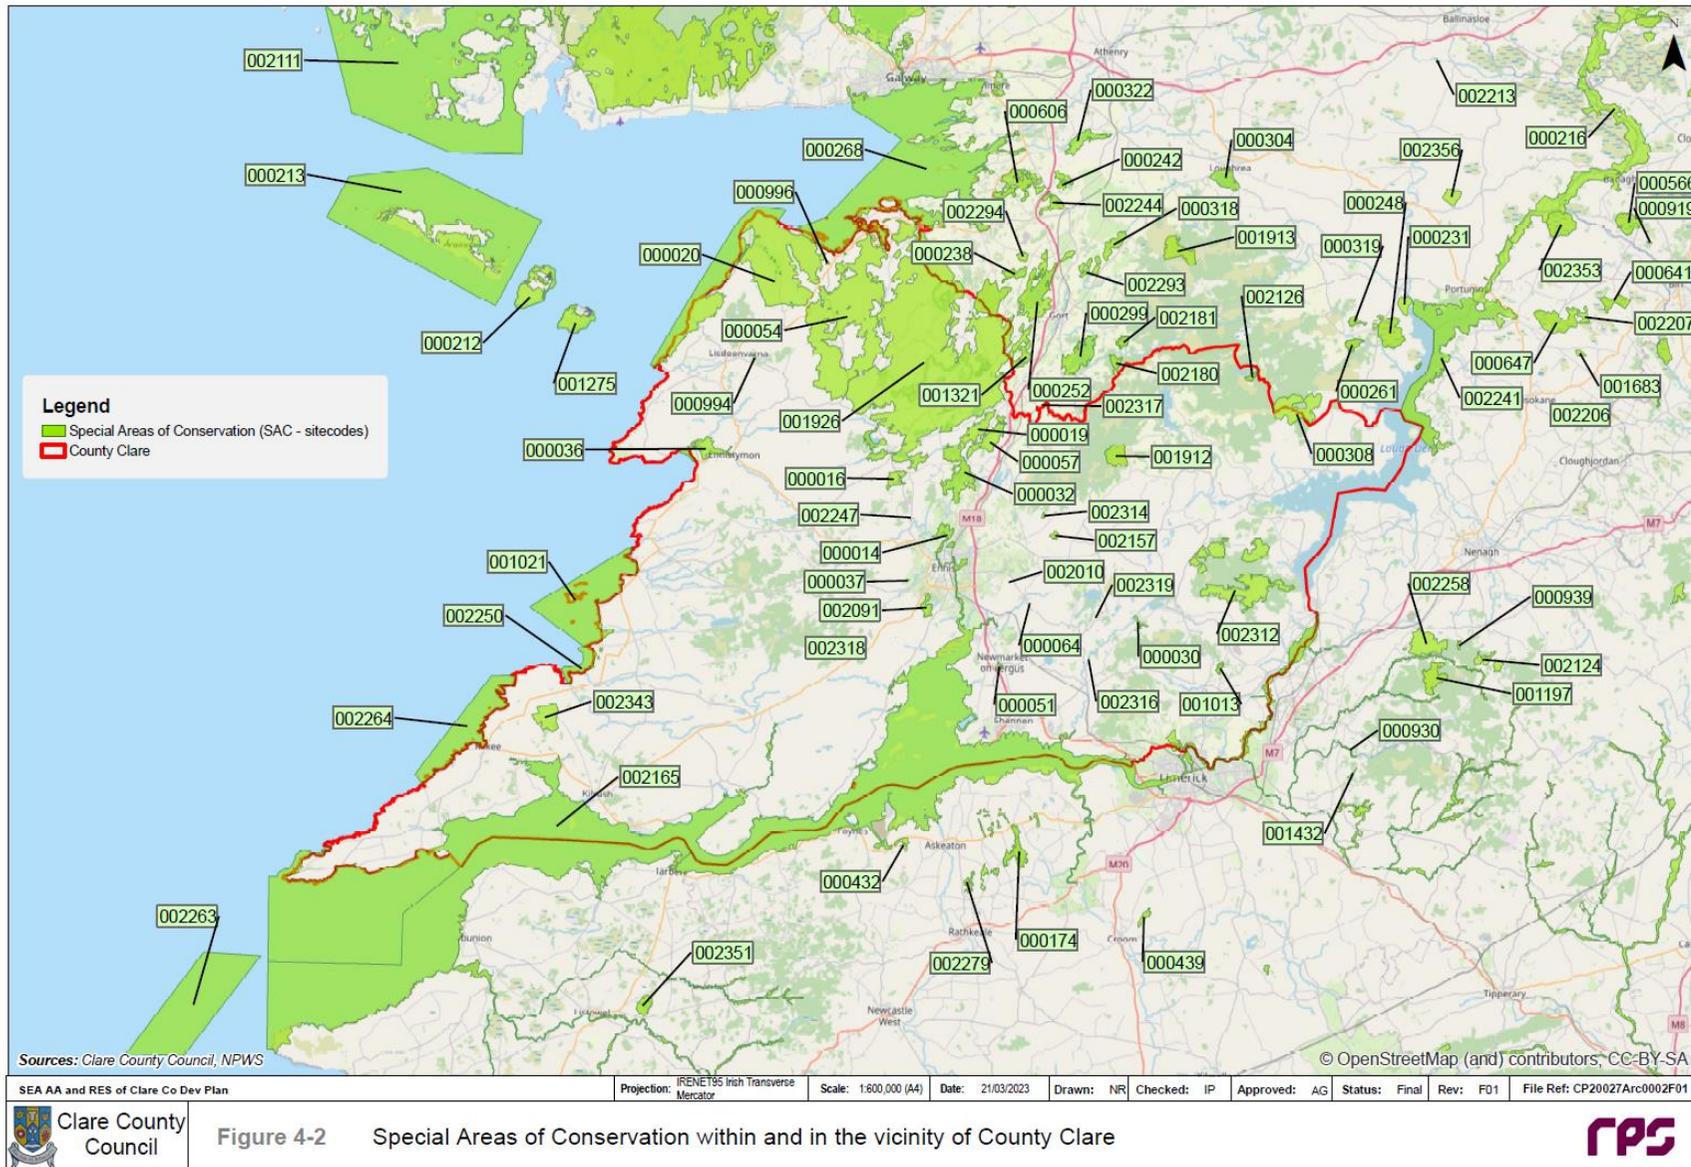

Figure 4-2: Special Areas of Conservation within the Zol

NATURA IMPACT REPORT

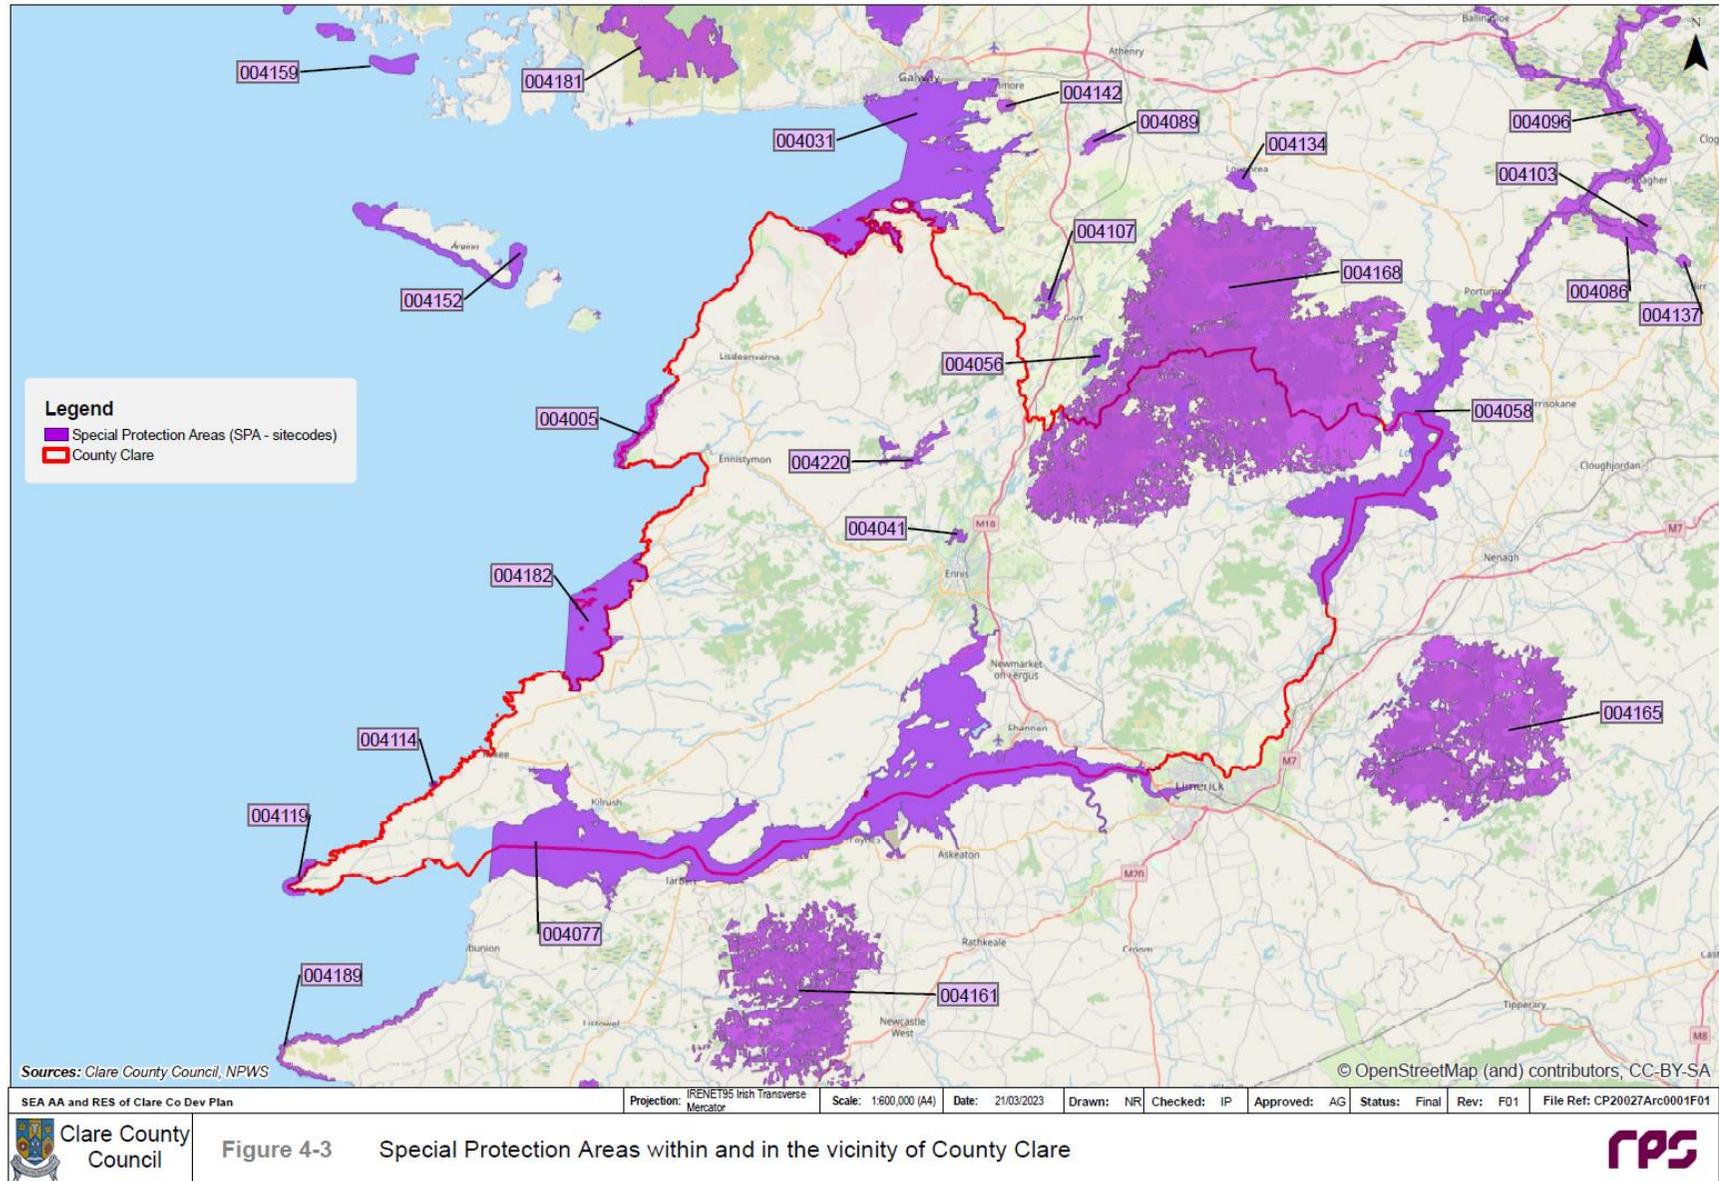

Figure 4-3: Special Protection Areas within the Zol

4.3 European Sites Importance and Threats

In order to identify whether European sites could be potentially affected, it was necessary to describe the European sites in the context of:

- Why it has been designated - Qualifying Interests (QIs) for SACs and Special Conservation Interests (SCIs) for SPAs;
- Generic threats and pressures to QIs and SCIs; and
- The environmental and ecological conditions that achieve and/or maintain the condition of the QIs and SCIs.

The most up to date information regarding European sites and their QIs/SCIs was taken from the NPWS website (www.npws.ie). Threats and pressures for QIs were extracted from the Status of EU Protected Habitats and Species in Ireland (NPWS, 2019 Volumes 1-3)², and for SCIs, from Irelands Article 12 submission to the EU Commission on the Status and trends of bird species (2008-2012)³.

Information on the parameters contributing to achieving and/or maintaining favourable conservation condition were largely compiled from a range Site Specific Conservation Objectives (SSCOs) downloaded from the NPWS website, but is also based on professional judgement.

The results of this desktop exercise are presented in **Appendix A**. This table lists each QI or SCI for European sites within the zone of influence of the CCDP and RES, generic threats and pressures for each QI/SCI, and the environmental conditions supporting each QI/SCI.

The following threats have been identified:

Rural/Agricultural activities

- Water pollution (ground/surface/transitional/coastal);
- Agricultural intensification;
- Fertilisation;
- Grazing, (under-grazing /over-grazing);
- Restructuring agricultural land holdings leading to land reclamation;
- Burning of land;
- Removal of vegetation (hedges/copses/scrub);
- Forestry (afforestation/deforestation);
- Stock feeding;
- Fences/fencing (upland & lowland);
- Infilling of ditches, dykes, ponds, pools, wetlands;
- Drainage/flooding;
- Offshore/onshore aquaculture;
- Bottom/suspension culture;
- Intensive fish farming;
- Pair trawling;
- Pesticides; and

² <https://www.npws.ie/publications/article-17-reports>

³ <https://www.npws.ie/status-and-trends-ireland%E2%80%99s-bird-species-%E2%80%93-article-12-reporting>

NATURA IMPACT REPORT

- Peat Extraction.

Economic, Enterprise, Retail and Infrastructural Development

- Water pollution (ground/surface/transitional/coastal);
- Water abstraction;
- Golf courses;
- Roads, motorways;
- Coastal and river protection works (Hard Engineering);
- Sewage outflows;
- Housing developments;
- Communications networks and installations;
- Quarries;
- Landfill/land reclamation;
- Disposal of household waste;
- River channel maintenance.
- Invasive alien species
- Renewable energy projects – windfarms, solar Farms, tidal energy etc
- Landslides, collapse due to infrastructural projects;
- Dredging;
- Sewage outflows;
- Housing developments (including demolition/renovation and/or construction);
- Light and air pollution;
- Geotechnical surveys; and
- Creation of barriers to migration.

Tourism, Recreation and Leisure

- Walking, horse riding and non-motorised vehicles;
- Offshore motorised vehicles;
- Bait digging;
- New paths and tracks;
- Increased tourism numbers leading to trampling and disturbance;
- Inappropriate infrastructure associated with tourism e.g., car parks, viewing points, signage, welfare facilities;
- Green and Blue Infrastructure – disturbance, loss of habitats and species, in-direct effects: and
- Human induced noise in the marine environments.

Towns and Villages/Rural Development

- Lack of infrastructure (waste water in particular) putting fresh water and in particular high-status waterbodies and waterbodies requiring priority action at risk; and
- Flooding.

The key output of this stage was the identification of the types of threats to the integrity of the European sites. These can then be related to the consequences of implementing the CCDP 2023-2029 to see if there is a risk of any likely significant effects

5 VOLUME 1 ASSESSMENT – WRITTEN STATEMENT

5.1 Structure of Volume 1

Volume 1 of the CCDP contains 20 chapters covering various aspect of future development within Co. Clare. These chapters are listed in **Table 5-1**.

Each chapter consists of objectives and supporting text that adds background to the objectives.

This NIR has assessed all objectives under each chapter for potential adverse effects upon the integrity of European sites and assumes any development will comply with the relevant objective(s), see **Appendix B**. Any amendment to objectives were also assessed and this process is summarised in **Appendix D**.

11	Transport, Service Infrastructure & Energy (Physical Infrastructure, Environment & Energy)
12	Shannon Estuary
13	Marine & Coastal Zone Management
14	Landscape
15	Biodiversity, Natural Heritage & Green Infrastructure
16	Architectural, Archaeological & Cultural Heritage
17	Towns & Villages
18	Design & Placemaking a (design and built environment)
19	Land Use & Zoning
20	Implementation & Monitoring

5.2 Mitigation Measures

Appendix B, Table B-1 contains all the objectives and summaries the results of the assessment. Any amendment to objectives were also assessed and this process is summarised in **Appendix D**.

In general, objectives were drafted as part of an iterative process where each objective was reviewed and where necessary revised to ensure the protection of European sites that form part of the Natura 2000 network. This integrated approach to objective development was seen as a positive approach to addressing potential adverse effects arising from the CCDP through avoidance of impacts in the first instance.

Following the consultation process and the members resolution booklet there were updates to/new objectives proposed. All amendments to objectives were reviewed and assessed within the NIR. The results of this review are presented in **Section 15** below.

The following discusses how mitigation measures either within the objective or identified within the assessment have addressed the potential for adverse effects upon the integrity of European sites.

NATURA IMPACT REPORT

1. Broad and high-level objective with no geographic area stipulated.

In these instances, an assessment of potential impacts upon European sites was not possible due to lack of specific information at this strategic level. Potential impacts will be more appropriately assessed and AA process applied at the design stage to ensure they can be avoided or mitigated when informed by site specific data. All development applications shall follow statutory requirements including Appropriate Assessment to ensure the protection of the Natura 2000 network.

2. Zoned area for development relating to a high-level objective

In some cases, the objective may be high level however specific areas have been zoned to support this objective. In these cases, the development has been assessed within Volume 3 where zoning for such development has been identified within the corresponding Settlement Statements. Any mitigation identified in the assessment of the Settlement Statements shall apply to the relevant Volume 1 objective. For example, CDP11.11 is a supporting objective for a number of road schemes within the county. The overarching objective CDP3.3 ensures the protection of European sites and that the statutory AA process is followed. In addition, where zoning for these road schemes has been mapped the zoning has been assessed for potential impacts and specific mitigation stipulated where considered necessary (Please see **Appendix E** for the results of the final assessment. Any changes to Municipal District Settlements since the initial assessment are tracked in **Appendix E**).

3. Reinforcement of statutory obligations

Objective CDP3.3 is an overarching objective regarding the protection of the Natura 2000 network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. In general, the legal requirement to apply the Appropriate Assessment process to plans/projects are not stated within each objective as it is a matter of law. However, in some cases compliance is reiterated and CDP3.3 integrated into an objective to reinforce statutory obligations (e.g., CDP6.9 and CDP8.3).

4. Mitigation incorporated within the objective

In some instances, development shall only be permitted following the consideration of specific aspects. This is usually that a development will be subject to appropriate site selection and environmental assessment process (e.g., CDP4.2, CDP9.) or the objective requires the protection of specific Annex I habitats and/or Annex II species (e.g., CDP13.13)

5. Supporting Objectives

It is noted that in many cases, objectives are supporting which have no specific potential for impacts. In these cases, the integration of the extensive protection objectives including the overarching objective CDP3.3 of this report, are considered important as they frame these supporting objectives in the context of the requirement in protecting the Natura 2000 network.

With the application of the environmental safeguards specified in the CCDP (in the form of CCDP policies and objectives) and mitigation measures specified in the NIR, it can be ascertained that Volume 1 will not adversely affect the integrity of a European site.

6 VOLUME 2 ASSESSMENT – MAPS

Volume 2 of the CCDP 2023-2029 consists of the mapping associated with the plan. These were reviewed to analyse any map-based proposals that had geographic specificity that could be assessed as posing adverse effects on integrity of European sites. These maps were utilised to inform the assessment of other volumes and the results of which are detailed within **Appendix B, D and E** of this NIR.

7 VOLUME 3 ASSESSMENT – MUNICIPAL DISTRICT SETTLEMENT PLANS

7.1 Structure of Volume 3

The assessment focused on the text of the general and specific objectives for each of the Settlement Plans covered by the four Municipal Districts (Ennis, Killaloe, West Clare and Shannon). Then the zoning maps for each settlement were analysed using GIS data for a variety of ecological attributes as described in **Section 2.3, 2.6 and 2.7**.

All Settlement Plans in each of the four Municipal Districts were assessed (the results for the initial assessment are contained within **Appendix C**). As part of the iterative process zonings were reviewed and where necessary revised to ensure the protection of European sites that form part of the Natura 2000. During the CCDP process and following the public consultation and members resolutions amendments to some zonings within all four Municipal Districts were made. All amendments to zonings were reviewed and assessed within the NIR. The results of the review process are presented in **Section 15** below. Any updates to the assessment as a result of zoning changes are summarised in **Appendix E** and the final assessment for all zonings are contained within this Appendix also.

7.2 Mitigation Measures

Where potential for adverse effects were identified during the assessment of the Settlement Plans the tables in **Appendix E** contain columns where mitigation is stipulated to ensure no potential adverse effects on the integrity of European sites would occur. Any updates to the initial assessment as a result of zoning changes are tracked in **Appendix E**.

The following **Table 7-1** is a summary of the mitigation measures proposed under each impact assessment criteria (1-4a & 4b as per **Section 2.6**).

The outcome of this stage was that all of the zonings could be capable of being implemented without having adverse effects on the integrity of European sites providing all the requirements are met at the planning application level. Mitigation measures will ensure that any planning application that does not provide the required information or prove beyond reasonable doubt that the mitigation provided at the site-specific level will meet the requirements of this NIR and CCDP documentation, will not be permitted.

NATURA IMPACT REPORT

Table 7-1: Summary of Mitigation Measures Stipulated where Potential for Adverse Effects were Identified during the Assessment of Volume 3- Settlements

Impact assessment Criteria	Potential Impact	Mitigation
1. Direct Loss/Reduction of European site habitat area	1. Zoned parcel within or adjoining boundary of European site(s)	<p>1. a) Removal of section from the zoning parcel; or</p> <p>b) Any development proposal shall undergo the AA process (AA screening or NIS as deemed necessary) including habitat assessments. The proposal shall clearly identify the spatial extent of any development and shall address the potential for increased disturbance (both in isolation and in combination with other plans/projects) upon the European site. Proposals that cannot avoid adverse effects upon European sites shall not be permitted; or</p> <p>c) Please see mitigation stipulated under the following criteria 2 –Habitat/Species Disturbance or Fragmentation, 3- Reduction in Species Density and 4 – Changes in Key Indicators of Conservation Value</p>
2.Habitat/Species Disturbance or Fragmentation	<p>1. Potential otter habitat (feeding, resting, commuting and/or breeding habitat) present supporting the species ex-situ of an SAC or within the SAC. Construction and/or operational activities may result in disturbance to otter and/or permanent loss of habitat.</p> <p>2. a) Removal of hedgerows/treelines could potentially</p>	<p>1. a) Any new development shall not restrict otter commuting routes along a water body and a minimum 10m buffer zone shall be located along each bank (where there is not already development).</p> <p>b) Any application shall be accompanied by an EcIA, AA screening and/or NIS as deemed relevant. These reports shall be informed by the relevant ecological surveys. Reporting shall include an assessment of potential disturbance during construction and operation (e.g., increased human presence, recreational activities, noise, lighting) upon otter at all life stage and supporting habitat.</p> <p>2. a) Any development application shall be</p>

NATURA IMPACT REPORT

Impact assessment Criteria	Potential Impact	Mitigation
	<p>impact on the foraging/commuting/roosting habitat of Lesser horseshoe bats and/ or further development could result in an increase in ambient light levels beyond the site boundary which could impact on foraging / commuting /roosting habitat of Lesser horseshoe bats and/ or</p> <p>Removal or renovation of existing old buildings located within the development site may potentially contain Lesser horseshoe bat roosts.</p> <p>3. Potential impact upon SCI birds (feeding, nesting, roosting, resting habitats) through increased disturbance (visual, physical) or fragmentation of supporting habitat.</p>	<p>accompanied by a full bat survey by a suitable qualified ecologist, particularly in relation to Lesser horseshoe bats usage of the site, and a full light spill modelling study to demonstrate that the chosen lighting design shall not create any increase in ambient light levels beyond the perimeter of the development footprint.</p> <p>b) Development applications shall not propose removal of woody vegetation around the perimeter of the site and shall address how linkages across the landscape can be maintained.</p> <p>3. a) Any development applications shall include an assessment by a suitably qualified Ecologist as to the potential for the site to support SPA SCI bird species. If the site is deemed suitable, detailed bird surveys should be undertaken on the site to accompany the development application. These assessments and/or surveys should inform an Appropriate Assessment Screening Report and/or Natura Impact Statement, dependent on the outcome of the site survey.</p> <p>If the site is deemed suitable, a full lightspill modelling study should accompany all development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development applications and demonstrate that the chosen lighting design would not create any increase in ambient light levels beyond the perimeter of the development footprint in relation to SCI birds.</p> <p>b) Removal of any hedgerows or trees (including trimming of trees) shall be</p>

NATURA IMPACT REPORT

Impact assessment Criteria	Potential Impact	Mitigation
	<p>4. Potential direct impact upon fisheries habitat (e.g., salmon, lamprey and/or white clawed crayfish habitat).</p> <p>5. Potential habitat fragmentation for fisheries should barriers to instream migration be put in place. Potential fragmentation of fisheries supporting habitat or ex-situ Annex habitat.</p> <p>6. Any further development/expansion in tourism in the area has the potential to result in direct/indirect disturbance to QI/SCI species within European sites (e.g., increased noise, visual disturbance) or result in fragmentation of Annex I habitats or supporting habitats to species (e.g., physical trampling) [At the strategic level of assessment it is not possible to clearly identify</p>	<p>undertaken outside of the bird nesting season 1st March to 31st August inclusive. If these works are required within this season, then an assessment of vegetation to be removed shall be conducted by a suitably qualified ecologist. Additional monitoring and licencing from NPWS may be required following the ecological assessment. Any vegetation removal within the nesting season shall be supervised by a suitably qualified ecologist if deemed necessary.</p> <p>4. a) The design and construction of any watercourse crossing (bridge/culverts) shall adhere to the guidance stipulated within "Guidelines on Protection of Fisheries During Construction Works in and Adjacent to Waters" (IFI 2016) and "Guidelines for the crossing of watercourses during the construction of national road schemes" (TII 2008) or any subsequent updates. The crossing shall be subject to detailed design and options appraisal. IFI and NPWS shall be consulted at an early stage in relation to the proposed options and any guidance/advice shall be followed.</p> <p>5. Please see criterion 3 – Reduction in Species Density for further fisheries mitigation.</p> <p>6. Any development proposal shall undergo the AA process (AA screening or NIS as deemed necessary) The proposal shall clearly identify the spatial extent of any tourism activities and shall address the potential for impacts (both in isolation and in combination with other plans/projects) upon European sites. Proposals</p>

NATURA IMPACT REPORT

Impact assessment Criteria	Potential Impact	Mitigation
	the scale or nature of tourism proposals for TOU lands]	that cannot avoid adverse effects upon European sites shall not be permitted.
3. Reduction in species density	<ol style="list-style-type: none"> 1. Potential disturbance and/or habitat fragmentation identified under criterion 2 which may result in decrease in QI /SCI species density 2. Potential impacts to water quality were identified under criterion 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs. 	<ol style="list-style-type: none"> 1. a) Please see mitigation stipulated under criterion 2- Disturbance and or Habitat/Species Fragmentation. 2. Please see water quality mitigation stipulated in 4a. <ul style="list-style-type: none"> a) In addition, development applications shall be accompanied by an Ecological Impact Assessment and Appropriate Assessment Screening Report and/or Natura Impact Statement, whichever is deemed relevant these should include an assessment of potential impacts upon water dependant QIs at all life stages (migration /spawning /juvenile /adult). b) Development shall allow a riparian buffer as per Planning guidance within IFI document 'Planning Watercourses in the Urban Environment' This includes ≥10m width along the stream side and ≥15m in the middle zone and ≥8m width in the outer zone as is appropriate for the river. Development within these zones shall be cognisant of the types of development suggested for each zone and ensure natural floodplain of the river is protected. c) Riparian buffer along the riverbanks shall be maintained to ensure ecological corridors are not fragmented and the ecological services these riparian corridors perform for the watercourse are maintained (e.g., flood attenuation, temperature regulation, woody debris source, hydromorphology).

NATURA IMPACT REPORT

Impact assessment Criteria	Potential Impact	Mitigation
	<p>3. Potential water quality impacts were identified under criterion 4a. Potential impact to freshwater pearl mussel (FWPM) populations via water quality changes.</p>	<p>3. Please see water quality mitigation stipulated under criterion 4a</p> <p>In addition, any proposed development shall need to take into consideration the potential negative effects on FWPM and its habitat. Any proposed development shall submit the appropriate environmental assessments including (but not limited to) an assessment of FWPM and ensure that the habitat requirements including water quality and host salmonid fish are not impacted.</p>
<p>4a. Changes in Key Indicators of Conservation Value -Water / Air Quality</p>	<p>1. Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites.⁴</p>	<p>1 a) Appropriate surface water management shall be installed during construction phase to ensure no direct discharges of unattenuated water enters any surface water body and European site. A Surface Water Management Plan shall be submitted as part of any planning application detailing how surface water run-off (including silt/hydrocarbons and other pollutants) shall be managed and controlled during construction.</p> <p>b) During operation appropriate SUDs shall be installed to treat surface water runoff prior to discharge to any surface water body (e.g., green roof, silt traps, petrol interceptors, permeable paving).</p>

⁴ A high-level assessment was conducted to assess potential hydrological connectivity to European Sites. Surface water connectivity from a zoning parcel to a European Site may be obvious via mapped waterbodies or drainage features visible from aerial imagery. Connectivity may also be present via road drainage bordering the zoning parcel or small drainage ditches not visible on aerial imagery. These may discharge to the nearest surface water body and form a pathway to a European Site. Confirming the presence of these drainage features is not within the scope of a high-level assessment. Therefore, where new development is proposed within a village and there is a surface water body nearby it is assumed there may be connectivity via road drainage/small ditches and thus a potential pathway for construction related pollutants to a European Site. Following a precautionary principal measure may be stipulated to mitigate water quality deterioration and adverse effects upon European Sites.

NATURA IMPACT REPORT

Impact assessment Criteria	Potential Impact	Mitigation
2. Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites.	3. Potential for impacts to water quality as a result of unattenuated run-off of organic waste and/or nutrients resulting in adverse effects upon European sites	2. Appropriate wastewater treatment facilities shall be provided that can fully demonstrate that there will be no adverse effects upon water quality and European sites and compliance with mitigation for CDP11.32.
4. Potential for impacts on the hydrology of groundwater-dependent Qualifying Interests of European sites (e.g., turloughs, petrifying springs).	5. Potential impacts upon air/water quality as a result of industrial emissions.	3. Any development proposal for animal housing shall ensure there is adequate capacity to store animal waste and application shall demonstrate proper disposal of waste without impacting upon ground or surface water quality
		4. Any development application shall be accompanied by a hydrogeological assessment and concludes that the development will not interfere with groundwater movement to the groundwater dependent Qualifying Interest of the European site.
		5. a) Where relevant it shall be ensured that any application which to maintain/amendment or seeks a new discharge to a water body is subject to the requirements of the EPA and discharge licencing. The potential impact upon water quality shall be fully assessed to inform an Appropriate Assessment Screening Report and/or Natura Impact Statement.
		b) Where relevant, ensure any application for further development shall be accompanied by an Air Quality Impact Assessment with reference to potential impacts to European sites within the zone of influence (to be determined by an air quality specialist) of any air emissions. This shall inform an Appropriate Assessment Screening Report and/or Natura Impact Statement.

NATURA IMPACT REPORT

Impact assessment Criteria	Potential Impact	Mitigation
4b. Changes in key indicators of conservation value -Invasive Species	<ol style="list-style-type: none"> <li data-bbox="651 233 1350 384">1. There is potential for disturbance and spread within European site or to hydrologically connect downstream European sites. These sites have invasive species listed as negative indicator within Conservation Objectives for QI(s) <li data-bbox="651 818 1350 938">2. Potential for introduction or spread of aquatic/terrestrial invasive species to European sites via watercraft / other equipment and vectors that may be brought into the area due to a recreation or tourism zoning. 	<ol style="list-style-type: none"> <li data-bbox="1406 233 2018 783">1. Any development application shall include an assessment of the site by a suitable qualified ecologist for the presence of invasive species. Should invasive be present the extent of infestation shall be mapped. The impact upon Conservation Objective of European sites shall be assessed and a management plan drawn up outlining how invasive species will be management on site to prevent spread during construction and operation. An appropriately qualified invasive species specialist shall be appointed should they be required to implement an eradication programme and any “vector” material transported off site is disposed of within a licenced waste facility, no works shall be permitted until the area is deemed suitable for works by an appropriate qualified ecologist/invasive species specialist. <li data-bbox="1406 818 2018 1153">2. Any development application should address the potential for introduction and spread of invasive species via watercraft / equipment movement into the area. Appropriate signage shall be erected notifying water users of invasive species and facilities provided for users to clean equipment. Any new or expansion to existing blueway facilities shall clearly demonstrate how biosecurity measures shall be implemented on site within the planning application.

8 VOLUME 4 ASSESSMENT: RECORD OF PROTECTED STRUCTURES

8.1 Structure of Volume 4

Section 10(2)(f) of the Planning and Development Act 2000 (as amended) states that the Development Plan shall include objectives for: “*The protection of structures, or parts of structures, which are of special architectural, historical, archaeological, artistic, cultural, scientific, social or technical interest.*”

Section 51(1) of the Planning and Development Act 2000 (as amended) indicates the rationale for providing a Record of Protected Structures, stating that: “For the purpose of protecting structures, or parts of structures, which form part of the architectural, heritage and which are of special architectural, historical, archaeological, artistic, cultural, scientific, social or technical interest, every development plan shall include a record of protected structures, and shall include in that record every structure which is, in the opinion of the planning authority, of such interest within its functional area.”

These structures play an integral part in the life of County Clare and the daily lives of its citizens. These structures are often inhabited or used as places of work, commerce, worship, education, recreation, and contribute positively to the character our towns, villages and countryside.

Volume 4 records a list of all the protected structures within County Clare including proposed additions, deletions and proposed modifications (to text) to the existing RPS and therefore it is not possible to assess for potential adverse effects as no works are stipulated.

The CDP does list objective in relation to Architectural, Archaeological and Cultural Heritage (CDP16.1 to 16.18). These objectives have been assessed within **Appendix B** of this NIR. Any updates to objectives have been assessed and summarised in **Appendix D**.

8.2 Mitigation Measures

While Volume 4 is a simply a list of all the protected structures within County Clare it is acknowledged that any development/ maintenance /refurbishment/ increased usage of these structures may have to potential to lead to significant adverse effects on European sites. Pathways for potential impacts include; surface water, groundwater/soils and/or air or there is potential for direct impacts to European sites through loss of QI habitats, disturbance to QI species or loss of supporting habitats.

Of particular note is the Annex II species, Lesser horseshoe bat which is also a QI of many SACs within County Clare. Some listed Protected Structures may support bat roosts and/or support colonies associated with an SAC designated for Lesser horseshoe bats. The following CCDP objective related to the protection of European sites and biodiversity;

- Objective CDP3.3 is the overarching core objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. In addition, all plans/projects must comply with WFD objectives and support the 3rd cycle RBMP.
- Objective CDP4.17 & CDP4.18 relate specifically to derelict buildings and include reference to bats and protected species within these structures and they must be considered.
- CDP11.42 relates to light pollution and ensures external lighting should be designed taking the *Bat Conservation Ireland Guidance Notes for: planners, engineers, architects and developers on bats and lighting* into consideration
- Objective CDP15.3 makes provision for the protection of European sites while Objective CDP15.4 stipulates requirement for plans and projects to undergo Appropriate Assessment. CDP15.10 makes provision for the requirement to comply with the EIA, SEA and Habitats Directives.
- Objective CDP15.5 makes provision for the protection of NHAs and pNHAs and Objectives CDP15.6, CDP15.7, CDP15.8 & CDP15.9 makes provision for the protection of other environmental and ecological sites. These sites may represent important supporting habitats for the European sites and act as ecological stepping stones.

REPORT

- Objective CDP15.12 makes provision for the promotion and protection of biodiversity. CDP15.13 specifically references the importance of urban ecology protection and CDP15.15 references biodiversity within local authority lands. CDP15.14 makes provision for enhancement of ecological corridors and prevention of habitat fragmentation.
- Objective CDP16.6 is specifically related to protected structures and biodiversity. It ensures the consideration of protected sites and species when works to protected structures are proposed. It also ensures that any decision making on heritage related projects and developments is informed by an appropriate level of environmental assessment.
- Objective CDP17.10d also relates to derelict buildings, any works shall be in compliance with the Habitats Directive

Any zoned land parcel which may contain a protected structure has been identified within the corresponding Municipal District Settlement Statements has been assessed within Volume 3 and any mitigation (if required) has been stipulated (See **Appendix E** for results of this assessment). Any updates to the initial assessment as a result of zoning changes are tracked in Appendix E.

In conclusion, with the application of the environmental safeguards specified in the CCDP (in the form of CCDP policies and objectives) and mitigation measures specified in the NIR for the Settlement Assessments within **Appendix E**, it can be ascertained that Volume 8 will not adversely affect the integrity of a European site.

9 VOLUME 5 ASSESSMENT – RENEWABLE ENERGY STRATEGY

The RES will set out the renewable energy resource targets for County Clare. It outlines the potential for a range of renewable resources, including Bioenergy (Biomass) and Anaerobic Digestion, Micro Renewables, Geothermal & Ground Source Heat Pump, Solar, Onshore Wind, Marine Renewables (Wave and Tidal Energy) and Micro Hydroelectric including storage. It acknowledges the significant contribution such renewables can make to County Clare, becoming more energy secure and less reliant on traditional fossil fuels, thus enabling future energy export and meeting assigned targets.

The RES also recognises the importance of the infrastructure in County Clare including road, electricity, gas and broadband networks, airport, ports and the Shannon Estuary, both in supporting the development of renewables and enabling a competitive supply chain economy.

9.1 Mitigation Measures

In tandem to the preparation of the new CCDP 2023-2029, a new Renewable Energy Strategy (hereafter referred to as the RES) is being prepared as Volume 5 of the CCDP and it is subject to SEA and also the subject of this Appropriate Assessment (AA)/Natura Impact Report.

The RES sets out the objectives and recommendations to be pursued to improve how CCC will support energy efficiency and conservation to achieve balanced social and economic development throughout the County and assist with obtaining Ireland's Green Energy Target.

This Chapter of the NIR provides an overview of the key objectives within the RES to protect the European site Network and mitigation measures within the NIR.

In summary, the objectives within the RES are broad and high-level objectives. There is very limited geographic specificity, therefore an assessment of potential impacts upon specific European Sites is not possible at this stage in the process. Potential impacts will be appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data.

This NIR assessment acknowledges that any Renewable Energy development, operations or decommissioning as a result of the RES may have to potential to lead to significant adverse effects on European sites. Pathways for potential impacts include; surface water, groundwater/soils and/or air or there is potential for direct impacts to European sites through loss of QI habitats, disturbance to QI species or loss of supporting habitats. For example, Objective RES 5.1G(b) concerns the retrofitting of existing buildings to achieve high level of energy conservation. This has the potential to disturb Lesser horseshoe bat roosts which are an Annex II species and designated as a QI for many European sites within County Clare.

Objective RES 15.2 seeks development of Pumped Freshwater Hydroelectric Energy Storage in the county. This has the potential to impact aquatic QI habitats or species as a result of introduction of blockages to fish passage, changes in hydromorphology and changes in hydrology and water quality.

As another example, Objective RES 7.1 concerns the development of commercial scale solar energy projects. This may have the potential to impact aquatic QI habitats or species during construction via water quality degradation should hydrological pathways to European Sites exists or there is potential to impact terrestrial QI species and habitat through land use change arising from the development of the solar site and / or grid connections.

Within the Renewable Energy Strategy, the objective **RES1.1A -G** is an overarching objective within Chapter 1 regarding environmental protection, biodiversity enhancement and protection of the European Site network. It ensures that the appropriate environmental statutory assessment process is followed. The inclusion of this objective in the RES was an iterative process working in tandem with the SEA and NIR of the RES. The objective incorporates the mitigation that was recommended within and is summarised below.

RES 1.1 Proposed Mitigation Measures (apply to all renewable energy development)

- A. Any proposals for renewable energy infrastructure shall comply with Chapter 17 Environmental Considerations & Development Management Advice and the overarching policies and objectives of the Clare County Development Plan 2023-2029.*

REPORT

- B. The EPA Environmental Sensitivity Mapping (ESM) Webtool and the Appropriate Assessment GeoTool should be applied to inform decision-making in terms of infrastructural/siting considerations as well as consideration of environmental sensitivities.*
- C. To ensure that renewable energy development proposals support and enhance the connectivity and integrity of habitats in the Renewable Energy Strategy (RES) area by incorporating natural features into the design of development proposals; and to work with infrastructure providers to co-develop infrastructural management plans to enhance biodiversity.*
- D. To require any Renewable Energy project to be in compliance with the objectives and requirements of the Habitats Directive, specifically Article 6(3) and where necessary 6(4), Birds, Water Framework (including the implementation of the 3rd Cycle RBMP), and all other relevant EU Directives and all relevant transposing national legislation.*
- E. To require project planning for any renewable energy project to be fully informed by ecological and environmental constraints at the earliest stage of project development and any necessary assessment to be undertaken, including assessments of disturbance to species and habitats, as required. Any ecological assessment shall also be required to consider ecological connectivity and potential supporting habitats to European Sites.*
- F. To require the preparation and assessment of all planning applications for renewable energy projects to have regard to the information, data and requirements of the Appropriate Assessment Natura Impact Report, SEA Environmental Report and Strategic Flood Risk Assessment Report of the County Clare County Development Plan 2023- 2029 and SEA of the Renewable Energy Strategy.*
- G. Ensure that no renewable energy projects are permitted that give rise to significant cumulative, direct, indirect or secondary impacts on the integrity of European Sites arising from their size or scale, land take, proximity, resource requirements, emissions (disposal to land, water or air), transportation requirements, duration of construction, operation, decommissioning or from any other effects, (either individually or in combination with other plans, programmes, etc. or projects) (Except as provided for in Article 6(4) of the Habitats Directive, viz. There must be: a) no alternative solution available, b) imperative reasons of overriding public interest for the project to proceed; and c) Adequate compensatory measures in place).*

In addition, the following objectives within the CDP ensure the protection of European sites and supporting habitats.

- Objective CDP3.3 is the overarching core objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. In addition, all plans/projects must comply with WFD objectives and support the 3rd cycle RBMP.
- Objective CDP15.3 makes provision for the protection of European sites while Objective CDP15.4 stipulates requirement for plans and projects to undergo Appropriate Assessment. CDP15.10 makes provision for the requirement to comply with the EIA, SEA and Habitats Directives.
- Objective CDP15.5 makes provision for the protection of NHAs and pNHAs and Objectives CDP15.6, CDP15.7, CDP15.8 & CDP15.9 makes provision for the protection of other environmental and ecological sites. These sites may represent important supporting habitats for the European sites and act as ecological stepping stones.
- Objective CDP15.12 makes provision for the promotion and protection of biodiversity. CDP15.13 specifically references the importance of urban ecology protection and CDP15.15 references biodiversity within local authority lands. CDP15.14 makes provision for enhancement of ecological corridors and prevention of habitat fragmentation.

Specific mitigation has been stipulated within the NIR of the CDP for two objectives relating to Renewable Energy projects, these are CDP2.21 which considers micro hydro power developments and CDP2.22 which relates to the Ardnacrusha facility.

Chapter and objective code	Mitigation
Climate CDP2.21	Any development of micro hydro power shall adhere to the overarching environmental objective within the Clare Development Plan and the Renewable Energy Strategy, CDP3.3 and RES1.1

REPORT

Chapter and objective code	Mitigation
	Any micro hydro power development shall be subject to the appropriate hydrological, hydromorphological and environmental assessments as required. In addition, the cumulative effect of multiple hydro power developments shall be considered at earliest stage within planning and design process.
Climate CDP2.22	<p>Any development of the Ardnacrusha Hydroelectric Power Station shall adhere to the overarching environmental objective within the Clare Development Plan and the Renewable Energy Strategy, CDP3.3 and RES1.1</p> <p>Any increase in power input from Ardnacrusha Hydroelectric Power Station to the grid shall be subject to the appropriate hydrological, hydromorphological and environmental assessments as required. This shall include an assessment of impacts upon fish migration and, the cumulative effect of increasing power input in combination with any other development or hydro power development shall be considered at earliest stage within planning and design process.</p>

Land parcels which have been zoned as a Strategic Residential Reserve, Utilities, Commercial, Mixed Use or Industry may potentially contain a renewable energy project. These zoned parcels have been identified within the corresponding Municipal District Settlement Statements and have been assessed within Volume 3 (See **Appendix E** for results of the final assessment, any updates to Municipal District Settlements since the initial assessment are tracked in **Appendix E**) and mitigation stipulated where required. **Table 7-1** provides a summary of all the mitigation measures stipulated within **Appendix E** and which applies to these land parcels assessed.

With the provision of the overarching environmental objective RES1.1, the core objective CDP3.3 and other environmental supporting objectives within the CCDP 2023-2029 and mitigation measures stipulated within **Appendix B, D and E**, it can be ascertained that Volume 5 will not adversely affect the integrity of a European site.

10 VOLUME 6 ASSESSMENT: CLARE COUNTY WIND ENERGY STRATEGY (WES)

The Clare County Wind Energy Strategy (WES) was adopted as Volume 5 of the CCDP 2011-2017. A Natura Impact Report was prepared and an Appropriate Assessment was undertaken on the strategy at the time of adoption.

The Department of Housing Planning, Community and Local Government (formally the Department of Environment, Community and Local Government) Planning Circular Letter 'Circular PL 20-13', dated 20th December 2013 in relation to 'Review of Wind Energy and Renewable Energy Policies in Development Plans' advises that local authorities should defer amending existing renewable and/or wind energy strategies until the review of a number of policy initiatives are completed, specifically the Wind Energy Development Guidelines and the Renewable Energy Export Policy and Development Framework, or until otherwise advised by the Department.

No changes occurred to the WES and the succeeding CCDP 2017-2023 included the existing WES in line with advice from the Department of Housing Planning, Community and Local Government.

The current WES will be included in the CCDP 2023-2029. There have been no changes to the content of the WES and it will not undergo reassessment.

It is acknowledged that since the adaptation of the WES the boundaries of SACs and SPAs may have changed and that there may now be a gap in the assessments carried out on the Strategy. However, given the contents of the Department Planning Circular, as and when new Guidelines are published the Strategy will undergo a review process and be reassessed. In addition to this, internal procedures in Clare County Council at the development management level provide for an added level of protection where the Strategy may be lacking, and areas identified as 'acceptable in principle' undergo a thorough and detailed assessment process.

The Wind Energy Strategy within the CCDP 2023-2029 was adopted following Strategic Environmental Assessment and Appropriate Assessments. Within the Wind Energy Strategy four classifications were developed for Wind Farm development in County Clare, which are as follows:

Strategic Areas - key areas are considered to be eminently suitable for wind farm development.

Acceptable in Principle - these areas are considered suitable for wind farm development.

Open to Consideration – Wind energy applications in these areas will be evaluated on a case-by- case basis subject to certain criteria.

Not normally permissible - These areas are not in principle considered suitable for wind farm development. There are some pNHAs and NHAs that fall within the 'Strategic Areas', 'Acceptable in Principle' and 'Open for Consideration' categories but none of the European sites in the County fall within these areas so in theory the WES does not necessarily facilitate applications for this type of development in European sites.

However, in the knowledge that impacts of wind energy developments may be indirect and/or off-site, there are other provisions in the WES to address this potential impact. Objective CDP8.38 will ensure the proper implementation of the WES throughout the lifetime of the plan and that all proposals are considered and implemented having full regard to the requirements of the Habitats Directive. There are also a number of CDP Objectives that ensure an overarching protection to the Natura 2000 Network. The Core Strategy CDP Objective 3.2 ensures that any development in the County will be subject to the requirements of the Habitats Directive. Protection for European sites is further bolstered by CDP15.3 and CDP15.4. Furthermore, sites which may provide supporting habitats and species to the European site Network are protected under Objectives CDP15.5 -CDP15.9.

11 VOLUME 7 ASSESSMENT: RETAIL STRATEGY

The Retail Strategy 2023 -2029 objectives and assessment are summarised in **Table 11-1** below.

In summary, all objectives are broad objectives. In general, no geographic area is stipulated and as such an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the project / design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development arising from the retail strategy shall be subject to Appropriate Assessment and planning process as required.

For all the objective under the Retail strategy the following objectives within the CCDP ensure the protection of European sites.

- Objective CDP3.3 is the overarching core objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. In addition, all plans/projects must comply with WFD objectives and support the 3rd cycle RBMP.
- Objective CDP4.17 & CDP4.18 relate specifically to derelict buildings and include reference to bats and protected species within these structures and they must be considered.
- CDP11.42 relates to light pollution and ensures external lighting should be designed taking the *Bat Conservation Ireland Guidance Notes for: planners, engineers, architects and developers on bats and lighting* into consideration
- Objective CDP15.3 makes provision for the protection of European sites while Objective CDP15.4 stipulates requirement for plans and projects to undergo Appropriate Assessment. CDP15.10 makes provision for the requirement to comply with the EIA, SEA and Habitats Directives.
- Objective CDP15.5 makes provision for the protection of NHAs and pNHAs and Objectives CDP15.6, CDP15.7, CDP15.8 & CDP15.9 makes provision for the protection of other environmental and ecological sites. These sites may represent important supporting habitats for the European sites and act as ecological stepping stones.
- Objective CDP15.11 makes provision for consideration of environmental impacts during brownfield and contaminated land regeneration.
- Objective CDP15.12 makes provision for the promotion and protection of biodiversity and references the protection of Lesser horseshoe bats specifically. CDP15.13 specifically references the importance of urban ecology protection and CDP15.15 references biodiversity within local authority lands. CDP15.14 makes provision for enhancement of ecological corridors and prevention of habitat fragmentation.
- Objective CDP15.16, CDP15.18 - CDP15.25 makes provision for the protection various habitat types and which may support European sites (e.g., peatlands, grasslands, wetlands, hedgerows, woodlands, inland waters)
- Objective CDP15.17 makes provision for the protection of freshwater pearl mussels.
- Objective CDP15.29 makes provision to take all necessary steps to prevent the spread of invasive species.
- Objective CDP17.10d also relates to derelict buildings, any works shall be in compliance with the Habitats Directive.

Any retail development and associated infrastructure where zoning for such development has been identified within the corresponding Municipal District Settlement Statements has been assessed within Volume 3 and mitigation stipulated as required. See **Appendix E** for the results of the final assessment. Any changes to Municipal District Settlements since the initial assessment are tracked in **Appendix E**.

In the context of the retail strategy, with the application of the environmental safeguards specified in the CCDP (in the form of CDP policies and objectives) and mitigation measures specified in the NIR for CCDP objectives and Municipal District Settlements within **Appendix B, D and E**, it can be ascertained that Volume 7 The Clare County Retail Strategy 2023 -2029 will not adversely affect the integrity of a European site.

REPORT

Table 11-1: Objectives for the Retail Strategy 2023- 2029

Objective Objective Code	Potential for adverse effects in the absence and mitigation
General Strategy	
CCC01 It is the Council's objective to ensure that all retail development permitted accords with the relevant requirements and criteria as established within the Retail Planning Guidelines for Planning Authorities 2012 and the Clare County Retail Strategy 2023-2029	No No pathways for impacts to European sites identified. This is general supporting objective of the Retail Planning Guidelines for Planning Authorities 2012 and the Clare County Retail Strategy 2023-2029.
CCC02 When assessing retail planning applications, it will be the objective of the Council to have regard to the findings of the capacity assessment contained in the Clare Retail Strategy 2023-2029, including the ability to counteract expenditure leakage. The onus will be on any applicant to demonstrate in a Retail Impact Assessment that the proposed floorspace is appropriate having regard to the quantum of floorspace required within that specific urban centre or settlement, in addition to evidencing all other relevant variables, as specified within the Retail Planning Guidelines.	No No pathways for impacts to European sites identified. Broad and general objective regarding assessment of planning applications.
CCC03 It is an objective of the Council that retail development should support the achievement of national planning policies which seek to develop towns of sufficient scale and quality to compete internationally and to be drivers of national and regional growth, investment and prosperity. Furthermore, national policy seeks to regenerate and rejuvenate towns and villages of all types and scale as environmental assets, that can accommodate changing roles and functions, increased residential population and employment.	No Broad and general objective supporting national policy. No pathways for impacts to European sites identified. Plans and policies themselves e.g., NPF or Ennis 2040 Strategy have been subject to Appropriate assessment.
CCC04 The Council shall promote and protect the core retail areas of the main settlements within the county as the preferred locations for retail development. This objective aims to protect the existing vitality and service provision of the town centres by preventing the development of retail enterprises in inappropriate locations or at a scale which would have a negative impact on retail competition within the County.	No This is a broad objective promoting retail development within preferred locations. No specific development projects detailed, therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required. Any zoned parcel which may facilitate retail development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E) Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3, CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.
CCC05 In accordance with the Retail Planning Guidelines (2012), there shall be a presumption against retail developments on edge of centre sites or out of town	No Broad and general objective regarding permission of developments on edge of

REPORT

Objective Objective Code	Potential for adverse effects in the absence and mitigation
<p>centre sites. Such proposals will only be considered when it has been clearly demonstrated that all viable, available and suitable sites in the core retail area have been fully investigated and considered in accordance with the Retail Planning Guidelines and in particular the sequential test.</p>	<p>centres, therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate retail development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E)</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3, CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>CCC06 It is the objective of the Council to permit retail development within the town centres of a size and scale which is appropriate to the level of the settlement</p>	<p>No</p> <p>This is a broad objective relating to appropriate level of retail development with towns. No specific development project detailed therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate retail development in town centres are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3, CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>CCC07 The Council will encourage the consolidation of other non-retail-based services within town centres, utilising existing vacant retail floorspace where necessary. This will aid in enhancing the vitality of town centres, encouraging them to maintain their role as employment locations in addition to reducing the proportion of vacant floorspace and recognising the value which non-retail uses can contribute to the local economy through the provision of employment and general economic benefit.</p>	<p>No</p> <p>Broad and general objective regarding use of existing vacant retail spaces.</p> <p>Derelict and undisturbed sites may provide habitat (roosting/nesting) for the Lesser horseshoe bat or some SCI bird species.</p> <p>Objective CDP4.17 & 4.18 relate specifically to derelict buildings and include reference to bats and protected species within these structures and they must be considered. In addition, objective (CDP17.10d) also relates to derelict buildings, any works shall be in compliance with the Habitats Directive. CDP15.12 references the protection of Lesser horseshoe bats specifically.</p>

REPORT

Objective Objective Code	Potential for adverse effects in the absence and mitigation
	<p>Any zoned parcel which may facilitate retail development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP4.17, CDP4.18, CDP15.3 - CDP15.25, CDP15.29 & CDP17.10d) and mitigation measures stipulated within this NIR assessment.</p>
<p>CCC08 To encourage and facilitate the preservation and enhancement of the retail role of smaller villages and centres around the County.</p>	<p>No Objective relates to preservation and enhancement of retail in small villages.</p> <p>This is a broad objective. No specific development project detailed therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate retail development or enhancement is assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>CCC09 The council will promote retail floorspace at ground level on primary retail streets within the core retail area where this would enhance the vitality and viability of these streets. Exceptions can be made where the proposed development clearly enhances the vibrancy and attractiveness of the area.</p>	<p>No Objective relates to promotion of existing usage of floor space and stipulates conditions when new development is permitted.</p> <p>This is a broad objective. No specific development project detailed therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate retail development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated</p>

REPORT

Objective Objective Code	Potential for adverse effects in the absence and mitigation
	<p>where required (see Appendix E).</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>CCC10 It is an objective of the Council to ensure new retail development would not (either by themselves or cumulatively with other developments) negatively impact the vitality and viability of existing retail centres within the County and MASP</p>	<p>No Objective relates to new development and impacts upon existing retail.</p> <p>This is a broad objective. No specific development project detailed therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate retail development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>CCC11 It is an objective of the Council to introduce measures to improve the accessibility of town centres by developing a safe pedestrian and cyclist friendly environment, which encourages a modal shift away from the private car.</p>	<p>No The support of reducing private car usage is generally positive in helping to reduce carbon emission and improve air quality. Any development of pedestrian or cycle routes has the potential to result in adverse effects upon the integrity European sites via habitat loss / fragmentation, disturbance, water quality changes or spread of invasive species.</p> <p>This is a broad objective. No specific development project detailed therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate retail development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).</p>

REPORT

Objective Objective Code	Potential for adverse effects in the absence and mitigation
	<p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>CCC12 The Council shall promote the utilisation of vacant commercial buildings in town and village centre locations as a preferred location for new retail investment. The Council shall promote an imaginative and practical approach to unit expansion and amalgamation to address modern retail requirements. Where no viable retail use can be sustained, alternative uses will be assessed on their own merits.</p>	<p>No Objective relates to supporting the utilisation of vacant commercial buildings.</p> <p>This is a broad objective. No specific development project detailed therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Derelict and undisturbed sites may provide habitat (roosting/nesting) for the Lesser horseshoe bat or some SCI bird species.</p> <p>Objective CDP4.17 & 4.18 relate specifically to derelict buildings and include reference to bats and protected species within these structures and they must be considered. In addition, objective (CDP17.10d) also relates to derelict buildings, any works shall be in compliance with the Habitats Directive. CDP15.12 references the protection of Lesser horseshoe bats specifically</p> <p>Any zoned parcel which may facilitate retail development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>CCC13 The Council will encourage alternative, short or interim measures to improve the visual appearance of vacant or derelict properties to enhance the overall streetscape. Measures include the use of attractive window graphics; shutter covers and hoardings.</p>	<p>No Objective relates to interim measures to improve the appearance of vacant or derelict properties.</p> <p>This is a broad objective. No specific development project detailed therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. CDP11.42 relates to light pollution and ensures external lighting should be designed taking the <i>Bat Conservation Ireland Guidance Notes for: planners, engineers, architects and developers on bats and lighting</i> into consideration.</p> <p>CDP15.12 references the protection of Lesser horseshoe bats specifically.</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>

REPORT

Objective Objective Code	Potential for adverse effects in the absence and mitigation
<p>CCC17 Support retailers in developing online service offer, consumer delivery strategies, collection/distribution hubs and click and collect capacity.</p>	<p>No Objective supports online retail services. This in itself does not provide any pathways for potential impacts upon the integrity of European sites. However, any upgrade or development of broadband infrastructure to support growing online retail sector has the potential to result in impacts via habitat loss / fragmentation, disturbance, water quality changes or spread of invasive species.</p> <p>Any development shall be subject to Appropriate Assessment and planning process as required. The National Broadband Plan is subject to the SEA and AA process and any mitigation stipulated within these assessments must be adhered to.</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required) including the National Broadband Plan and environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29)</p>
<p>CCC18 The Council will encourage 'living over the shop' whereby the upper storeys of buildings have a residential function with the ground floor used for commercial or retail purpose</p>	<p>No No pathways for potential impacts to European sites was identified. Objective relates solely to the usage of the upper storeys of building not development.</p>
<p>CCC19 The Council will support and promote the tourism potential of Shannon and Bunratty by facilitating and enhancing the expansion of the existing tourism offer and identifying opportunities that will promote visitor experiences.</p>	<p>No Objective relates to promotion of tourism. Any increase in tourism has the potential to result in adverse effects upon the integrity European sites via habitat loss / fragmentation, disturbance, water quality changes or spread of invasive species.</p> <p>This is a broad objective. No specific development project detailed therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate tourism development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>Ennis Strategy</p>	
<p>EN01 Support and enhance Ennis as the primary retail centre in County Clare in accordance with the objectives of the National Planning Framework and Regional Spatial and Economic Strategy for the Southern Region.</p>	<p>No Broad and general objective supporting national policy. No pathways for impacts to European sites identified. NPF and RSES have been subject to Appropriate</p>

REPORT

Objective Objective Code	Potential for adverse effects in the absence and mitigation Assessment.
EN02 To protect and enhance the amenities of the town centre and ensuring that retail floorspace is developed in a sustainable manner that complements the improvement of the town overall.	No
EN03 To focus on regenerating the town centre and main street areas with a view to creating more attractive, desirable places that people want to live and spend time in, for work, shopping or recreational purposes.	Broad and general objectives. A number of European sites surround Ennis town with Lower River Shannon SAC and River Shannon & River Fergus Estuaries SPA flowing through the town. Any development of retail and associate infrastructure within Ennis has the potential to result in impacts via habitat loss / fragmentation, disturbance, water quality changes or spread of invasive species.
EN04 Ensure that retail proposals will enhance the vitality and viability of Ennis. The sequential approach to retail development set out in the "Retail Planning – Guidelines for Planning Authorities, 2012" will be strictly enforced, with a priority to town centre.	No specific development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.
EN05 To continue to support the retail core area as a compact and attractive town centre with a strong retail sector with a particularly strong reputation for comparison goods.	AA and SEA for the Ennis 2040 plan has been undertaken. Following the mitigation stipulated there would be no adverse effect on the integrity of European sites.
EN06 To promote Ennis as a compact, attractive and walkable urban core having regard to '10 min town' objectives contained within the plan.	Any zoned parcel which may facilitate retail development within Ennis has been assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).
EN07 To encourage the reuse of vacant buildings or under-utilised sites throughout the town and promote the development of brownfield sites.	Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29), Environmental Objectives within the Ennis 2040 Strategy and mitigation measures stipulated within this NIR and mitigation stipulated in environmental assessment for Ennis 2040 Strategy.
EN08 Encourage and support investment and improvement in the public realm (new attractive planting, resurfacing, street furniture and traffic calming) via funding granted under the URDF.	
EN09 To support the diversity of non-retail uses at street level where such uses attract customers, that complement the vitality, vibrancy and activity and bring linked trips to the town centre.	
EN10 Promote Ennis' extensive bulky goods offering by allowing for an edge of centre retail development which will support bulky comparison retailing within the town and address leakages to other nearby settlements.	
EN11 Continue to support the established festivals and events that take place within Ennis and consider opportunities for further events.	
EN12 Support a 'Shopfront Improvement Scheme' to improve the design and quality of shop signage throughout the town centre, through the provision of guidance and grant funding that enable owners to make improvements to their buildings/shopfronts.	
EN13 Support the delivery of Ennis 2040 Economic and Spatial Strategy and work with Ennis 2040 Designated Activity Company to deliver on the strategic objectives and guiding principle of the strategy.	
EN14 Consider removing the car parking at Lysaght car park and introducing a civic apace in its place off Lower Market Street. This may increase the appeal for occupation of some of the vacant buildings in the vicinity of the car park site, including Chapel Lane.	
EN15 Support the Ennis Niche Destination Plan.	
EN16 Seek to implement the Strategic Objectives and Guiding Principles set out in	

REPORT

Objective Objective Code	Potential for adverse effects in the absence and mitigation
Ennis 2040 Economic and Spatial Plan	
EN17 Support the work of the Ennis 2040 Designated Activity Company, tasked with the delivery of projects arising from the Ennis 2040 strategy.	
Shannon MASP Area Strategy	
<p>MASP01 Shannon Support the continuing improvement of retail facilities in Shannon Town Centre through the delivery of the adopted Shannon Town Centre Masterplan; To improve on and enhance the vitality and viability of the town centre and increase its competitiveness with other retail destinations. To support opportunities for brownfield redevelopment to support mixed-use sustainable urban development In areas adjacent/contiguous to the core retail area to support the diversity of non-retail uses at street level where such uses attract customers, that complement the vitality, vibrancy and activity and bring linked trips to the town centre. Maintain the vitality and viability of the Shannon Town Centre by consolidating investment in the shopping centre Encourage and facilitate the reuse of vacant units/sites throughout the town and shopping centre Support the delivery of the Shannon Town Centre Masterplan to create a strengthened viable and vibrant town centre supporting a quality, varied retail offer with improved physical appearance, connectivity and the development of a 'streetscape'. Support the planned N19 upgrade which will improve connectivity to Shannon International Airport. Support the delivery of the objectives for Shannon set out in the Limerick-Shannon Metropolitan Area Transport Strategy. Support the work of the Shannon Chamber of Commerce. To work with key stakeholders within the Shannon area including Shannon Commercial Properties and Shannon International Airport to deliver on the ambitions for Shannon as set out in the Draft Clare County Development Plan 2023-2029 Promote the tourism potential of both Shannon and Bunratty by enhancing the expansion of the existing tourism offer and identifying opportunities that will promote visitor experiences and facilitate the delivery of sustainable tourism-related retail developments and initiatives, of appropriate scales, located within close proximity to tourist attractions.</p>	<p>No Broad and general objectives. A number of European Sites fall into this area including Lower River Shannon SAC and River Shannon & River Fergus Estuaries SPA Any development of retail and associate infrastructure within Shannon MASP01 has the potential to result in impacts via habitat loss / fragmentation, disturbance, water quality changes or spread of invasive species.</p> <p>No specific development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>The SIFP has been subject to AA and SEA. Following mitigation, it was determined that adverse effects upon European sites were excluded. The SIFP along with the mitigation measures is integrated into the CCDP 2023-2029 and Volume 9 of this NIR assessment.</p> <p>General environmental objectives within the SIFP ensure any development is subject to the appropriate environmental assessments, and follow the relevant legislation and guidance to protect European sites and supporting habitats (SIFP ENV 1.5 -1.7)</p> <p>Objectives SIFP MTL1.2 and SIFP AVI1.5 ensure any Airport development is subject to the appropriate environmental assessments, and follow the relevant legislation and guidance to protect European sites.</p> <p>Any zoned parcel which may facilitate retail development, tourism or associated infrastructure within MASP01 has been assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29), Environmental Objectives within the SIFP and mitigation measures stipulated within this NIR and mitigation stipulated in environmental assessments for the SIFP.</p>
<p>MASP02 District Centres The role and scale of the District Centres as primarily convenience shopping centres capable of supporting a main food shopping trip will be maintained; Reinvestment and regeneration of existing district centres will be supported</p>	<p>No Broad and general objectives. A number of European Sites fall into this area including Lower River Shannon SAC and River Shannon & River Fergus Estuaries</p>

REPORT

Objective Objective Code	Potential for adverse effects in the absence and mitigation
<p>but only provided where it does not change their role and scale; District Centres should remain primarily convenience goods and service centres, and should not develop into primarily comparison goods retail destinations;</p> <p>District centres should not be allowed to expand significantly above the 10,000 m² (net) size threshold set out in the Retail Planning Guidelines for Planning Authorities.</p> <p>To support opportunities for brownfield redevelopment to support mixed-use sustainable urban development for day and evening use, which include retail, residential, commercial, civic and other uses. This will ensure that a mix of uses is facilitated by a district level centre that would complement the uses of the City Centre, having regard to the principles of compact growth, consolidation and densification. Any such development considerations should account for high levels of accessibility, including pedestrian, cyclists and public transport (where feasible).</p>	<p>SPA. Any development of retail and associate infrastructure within District Centres MASP02 has the potential to result in impacts via habitat loss / fragmentation, disturbance, water quality changes or spread of invasive species.</p> <p>No specific development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>The SIFP has been subject to AA and SEA. Following mitigation, it was determined that adverse effects upon European sites were excluded. Kilrush	
KL01 Support the improvement of retail facilities in Kilrush Town Centre through the provision of brownfield redevelopment to support mixed-use sustainable urban development	No
KL02 Promote rejuvenation throughout within the core retail areas by the reuse of vacant floorspace to reduce vacancy levels. Where no viable retail use can be sustained, alternative uses will be assessed on their own merits.	Broad and general objectives. Kilrush is hydrologically connect the Lower River Shannon SAC and River Shannon & River Fergus Estuaries SPA. Any development of retail and associate infrastructure within Kilrush has the potential to result in impacts via habitat loss / fragmentation, disturbance, water quality changes or spread of invasive species.
KL03 To improve on and enhance the vitality and viability of the town centre and increase its competitiveness with other retail destinations.	No specific development project detailed with the exception of the Maritime Training Centre. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.
KL04 The settlement of Kilrush shall apply a sequential approach to all new retail in the town with a priority to town centre.	
KL05 Enhance the diversity of non-retail uses at street level where such uses attract customers, that complement the vitality, vibrancy and activity and bring linked trips to the town centre.	

REPORT

Objective Objective Code	Potential for adverse effects in the absence and mitigation
KL06	Support the Kilrush Town Team across their various interest groups
KL07	Support the delivery of the Maritime Training Centre in Kilrush Town, which will contribute to the retail demand within the town.
KL08	Support the DigiClare Hub within the town and the expansion of this resource into the future.
Ennistymon	
EY01	To improve on and enhance the vitality and viability of Ennistymon town centre and increase its competitiveness with other retail destinations.
EY02	To encourage the reuse of vacant buildings or under-utilised sites throughout the town
EY03	Develop a 'Shopfront Improvement Scheme' to improve the design and quality of shop signage throughout Ennistymon
EY04	To regenerate the traditional town centre with a vision to produce more attractive, desirable places that people want to live and spend time in, for work, shopping or recreational purposes.
EY05	Review and reduce wirescape within the town centre where possible, which currently serves to detract from the attractiveness of the core retail area.
EY06	The settlement of Ennistymon shall apply a sequential approach to all new retail in the town with a priority to town centre.
EY07	Support the delivery of the planned West Clare Railway Greenway which will pass through Ennistymon and onto Lahinch

REPORT

Objective Code	Objective	Potential for adverse effects in the absence and mitigation
		<p>Directive.</p> <p>CDP10.11h also ensure the appropriate environmental assessments are conducted as well as assessment any impacts that may arise from increased visitor pressures. Any zoned parcels which may facilitate the West Clare Greenway are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP10.11h, CDP11.13d, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR.</p>
EY08	Support the Ennistymon Town Team	<p>No</p> <p>Broad and general supporting objective. No pathway for impacts to European sites identified.</p>
EY09	Support the delivery of the Ennistymon Town Master plan which will identify public realm opportunities within the town that can be utilised to enhance the towns offering.	<p>No</p> <p>Broad and general supporting objective. No pathway for impacts to European sites identified.</p>
EY10	Support the delivery of the planned new River Crossing which will help to address traffic congestion within the town especially at peak travel times and during the peak tourist season.	<p>No</p> <p>This is a broad objective supporting a river crossing. No specific location is identified within the objective. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>The Inagh River Estuary SAC flows through Ennistymon. Any river crossing has the potential to result in impacts via habitat loss / fragmentation, disturbance, water quality / hydromorphology changes or spread of invasive species.</p> <p>CDP11.15 specifically relates to bridge crossings and environmental constraints that must be considered for any proposal, including otter, salmon, lamprey and compliance with IFI guidance and Habitats Directive.</p> <p>Any zoned parcels which may facilitate River Crossing within Ennistymon are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E).</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP11.15, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR.</p>
Scariff		
SF01	To protect and enhance the retail services and facilities within Scariff and	No

REPORT

Objective Objective Code	Potential for adverse effects in the absence and mitigation
SF02	Scariff is located with a Margaritifera sensitive catchment and hydrologically connected to Lough Derg SAC and SPA. Any development of retail and associate infrastructure within Scariff has the potential to result in impacts via habitat loss / fragmentation, disturbance, water quality changes or spread of invasive species.
SF03	Broad and general objectives. No specific development project detailed therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts will be more appropriately assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.
SF04	To promote a 'Shopfront Improvement Scheme' to enable owners to make improvements to their buildings/shopfronts within the retail core through grant funding, so as to continually improve design and quality of the street frontage Development has been assessed within Volume 3 where zoning for retail development has been identified within the Kilrush settlement statements (see Appendix E). Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR.
SF05	Support Scariff Town Team and Tidy Town Team. No Broad and general supporting objective. No pathway for impacts to European sites identified.

REPORT

12 VOLUME 8 ASSESSMENT: HOUSING STRATEGY

The Clare County Housing Strategy 2023 -2029 objectives are summarised in **Table 12-1** below. There was no potential for adverse effects on the integrity of the European sites as a result of the Strategy.

In summary, all objectives (PO1 -PO11) are broad and high-level supporting objectives. No geographic area is stipulated. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development arising from the housing strategy shall be subject to Appropriate Assessment and planning process as required.

For all the Housing Strategy objectives, the CDP objectives ensure the protection of European sites.

- Objective CDP3.3 is the overarching core objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. In addition, all plans/projects must comply with WFD objectives and support the 3rd cycle RBMP.
- Objective CDP4.17 & CDP4.18 relate specifically to derelict buildings and include reference to bats and protected species within these structures and they must be considered.
- CDP11.42 relates to light pollution and ensures external lighting should be designed taking the *Bat Conservation Ireland Guidance Notes for: planners, engineers, architects and developers on bats and lighting* into consideration
- Objective CDP15.3 makes provision for the protection of European sites while Objective CDP15.4 stipulates requirement for plans and projects to undergo Appropriate Assessment. CDP15.10 makes provision for the requirement to comply with the EIA, SEA and Habitats Directives.
- Objective CDP15.5 makes provision for the protection of NHAs and pNHAs and Objectives CDP15.6, CDP15.7, CDP15.8 & CDP15.9 makes provision for the protection of other environmental and ecological sites. These sites may represent important supporting habitats for the European sites and act as ecological stepping stones.
- Objective CDP15.11 makes provision for consideration of environmental impacts during brownfield and contaminated land regeneration.
- Objective CDP15.12 makes provision for the promotion and protection of biodiversity and references the protection of Lesser horseshoe bats specifically. CDP15.13 specifically references the importance of urban ecology protection and CDP15.15 references biodiversity within local authority lands. CDP15.14 makes provision for enhancement of ecological corridors and prevention of habitat fragmentation.
- Objective CDP15.16, CDP15.18 - CDP15.25 makes provision for the protection various habitat types and which may support European sites (e.g., peatlands, grasslands, wetlands, hedgerows, woodlands, inland waters)
- Objective CDP15.17 makes provision for the protection of freshwater pearl mussels.
- Objective CDP15.29 makes provision to take all necessary steps to prevent the spread of invasive species.
- Objective CDP17.10d also relates to derelict buildings, any works shall be in compliance with the Habitats Directive.

REPORT

Any housing development and associated infrastructure where zoning for such development has been identified within the corresponding Municipal District Settlement Statements has been assessed within Volume 3 and mitigation stipulated as required. See **Appendix E** for the results of the final assessment. Any changes to Municipal District Settlements since the initial assessment are tracked in **Appendix E**.

In conclusion, with the application of the environmental safeguards specified in the CCDP (in the form of CCDP policies and objectives) and mitigation measures specified in the NIR for CCDP objectives and Municipal District Settlements within **Appendix B, D & E**, it can be ascertained that Volume 8 Clare County Housing Strategy 2023 -2029 will not adversely affect the integrity of a European site.

Table 12-1: Objectives for the Clare County Housing Strategy 2023-2029

Objective Code	Objective	Potential for adverse effects and mitigation.
PO1	To provide new homes to meet expected future housing requirements in the County as identified in the HNDA and Housing Supply Target. A Housing Supply Target of 4,500 homes will be pursued over the plan period to meet requirements as a result of forecast housing demand. New homes shall be provided in a planned and coordinated manner in accordance with the aims and policies of the Core Strategy, the RSES, and the National Planning Framework.	<p>No</p> <p>Objective relates to support of the NPF and RSES in meeting expected future housing requirements. No specific development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Both the NPF and RSES have been subject to AA and SEA.</p> <p>Any zoned parcels which may facilitate housing development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E)</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
PO2	To aim for housing to be available to meet the needs of people of all needs and incomes in County Clare, with an appropriate mix of housing sizes, types, and tenures in suitable locations.	<p>This is a broad objective regarding housing needs. No specific development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate housing development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E)</p>

REPORT

Objective Objective Code	Potential for adverse effects and mitigation.
	<p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>PO3 To provide for existing unmet housing need as identified by the Clare County Council social housing needs assessment through the provision of social housing using a range of delivery mechanisms including direct delivery by the Council, delivery through Approved Housing Bodies, and through short- and long-term leasing arrangements organised by the Council with private landlords.</p>	<p>This is a broad objective regarding social housing development. No specific development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate housing development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E)</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>PO4 To provide social housing to meet forecasted new future housing need over the plan period as identified in the HNDA. The Council will endeavour to meet its targets under Housing for all of 833 new social homes over the period 2022-2026 and to meet forecasted need for 870 social housing units over the plan period 2023-2029 as resources allow.</p>	<p>This is a broad objective regarding social housing development. No specific development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate housing development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E)</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
<p>PO5 To require that 20% of lands in respect of which permission for the development of houses is granted, be reserved for social and affordable housing in accordance with the Affordable Housing Act 2021 and Part V of the</p>	<p>This is a broad objective regarding quantity of affordable and social housing to be developed. No specific development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high</p>

REPORT

Objective Objective Code		Potential for adverse effects and mitigation.
	<p>Planning and Development Act 2000 (as amended). This requirement shall comprise 10% for social housing; up to 5% for affordable housing, subject to national guidance and regulation and subject to Clare County Council's determination of the appropriateness of affordable housing delivery on individual sites; and the remaining percentage (5% or greater) planning gain will be applied as appropriate to achieve the overall 20% net monetary value. The Council reserves the right to determine the appropriateness of 'Part V' Cost Rental and/or affordable purchase delivery on individual sites on a case-by-case basis. Any subsequent amendments to this legal requirement to deliver social and affordable housing during the lifetime of this strategy will be complied with. Delivery of 'Part V' housing shall be in accordance with relevant legislation and national, regional, and local policy.</p>	<p>level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate housing development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E)</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
PO6	<p>To support high-quality design in new housing and promote housing that is attractive, safe, and adapted to needs of existing and future households including future household sizes.</p>	<p>This is a broad objective regarding character new housing must achieve. No specific development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Any zoned parcel which may facilitate housing development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E)</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.</p>
PO7	<p>To provide housing appropriate to the needs of the elderly, persons with disabilities, lone parents, Travellers, and the homeless. The Council shall support and promote the use of Universal Design principles and Lifetime Homes in new housing developments to meet the needs of diverse groups and an aging population</p>	<p>This is a broad objective regarding provision of housing for elderly or those with disabilities. No specific development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.

Any zoned parcel which may facilitate housing development are assessed with Volume 3 where zoning for such development has been identified and mitigation stipulated where required (see Appendix E)

Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CCDP (mainly CDP3.3, CDP15.3 - CDP15.25 & CDP15.29) and mitigation measures stipulated within this NIR assessment.

13 VOLUME 9 ASSESSMENT: SHANNON INTEGRATED FRAMEWORK PLAN (SIFP)

The Strategic Integrated Framework Plan (SIFP) for the Shannon Estuary was adopted as Variation No. 2, Volume 9 of the CCDP 2011-2017. A Natura Impact Report (NIR) was prepared for the SIFP at the time of preparation and an Appropriate Assessment was undertaken. A separate NIR was prepared and an Appropriate Assessment was undertaken on the variation to the CDP to adopt the SIFP. There are no changes to the contents of the strategy and therefore it will not undergo reassessment.

The NIR for the SIFP identified a range of potential impacts on European sites that required mitigation. Overarching mitigation measures are included in the SIFP Environmental Report and are in accordance with the Strategic Environmental Objectives but also overlap with mitigation measures provided in the SIFP NIR.

The NIR for the variation to the CDP to adopt the SIFP includes another tier of mitigation measures and details the types of surveys required at each site at project level AA. The NIR for Variation No. 2 concluded that the mitigation measures proposed would ensure no adverse effect on the integrity of European sites as a result of the implementation of the proposed variation. The relevant mitigation measures from the SIFP ER and NIR that are de facto integrated into the CCDP are summarised in the section below.

13.1 Mitigation Measures

The following details the mitigation measures outlined within the NIR and ER for the SIFP and which are incorporated in the CCDP

SIFP Environmental Report

- BFF MM 1 As per objective SIFP ENV 1.6 the HAD [AA] and mitigation will ensure that proposed developments will not have an impact and take full account of the habitats and species, water quality, ecology, risk of disturbance and flood risk areas as per the Shannon CFRAMS. Provide for sufficient riparian buffer zones along the Natura 2000 site to maintain the integrity of the site.

SIFP Natura Impact Report

- BFF MM32 At a project level it is not sufficient to defer the production of construction method statements these should be completed at the project design stage and subject to Habitats Directive Assessment.
- BFF MM33 Requirements for consents and the design of project level mitigation for Strategic Development Locations should be covered in the overall assessment of the site.
- BFF MM34 While Strategic Development Locations have been put forward should issues arise under Article 6(3) of the Habitats Directive at a project level, they may require assessment. Should this assessment produce a finding of significant effects an alternative solution will be required.
- BFF MM 35 In selecting the alternative solution it will be necessary to comply fully with Article 6(3) (and, if warranted, Article 6(4), including compensatory measures) of the Habitats Directive.
- BFF MM36 Pre-construction surveys should be conducted by suitable qualified ecologists in areas of future development which require the loss of structures, trees or suitable feeding areas for nesting bird and bat species. Should any important species be found during the surveys the sequential approach of avoid, reduce or mitigate should be adopted to prevent significant effects.
- BFF MM37 A “No net loss” principle for those habitats and species of conservation interest as identified through the conservation objectives should be adopted for the Lower Shannon Estuary ecosystem.
- BFF MM38 The Steering Group structure established as part of the SIFP should continue to meet in order to facilitate dialogue between industrial operators and nature conservation bodies such as the NPWS and IFI.
- BFF MM39 In relation to objective AV 1.5 any such development should ensure the protection of the structure and function of the Shannon Airport Coastal Lagoon as detailed and required by the conservation objectives for the Lower Shannon SAC qualifying interest feature [1150].

REPORT

- BFF MM40 At project level any proposed development within a Strategic Development Location or Area of Opportunity will need to consider impacts to the Qualifying Interest features of surrounding Natura 2000 sites within an appropriate buffer zone and undertake as a minimum a Habitats Directive Assessment Screening Statement. This should include those Natura 2000 sites which were screened out of the SIFP where appropriate;
 - Barrigone SAC
 - Kerry Head Shoal SAC
 - Askeaton Fen Complex SAC
 - Loop Head SPA
 - Stacks to Mullaghareirk Mountains, West Limerick Hills and Mount Eagle SPA
 - Kerry Head SPA
- W MM 28 To ensure the impacts from development/change in land use practices (including flood plain development) minimises interference with aquatic habitats, it is essential that those areas adjacent to the waterways (riparian buffer zones) are managed in a manner which will reduce impacts on these habitats. These should be drawn up in consultation with NPWS and IFI.
- W MM 28 Consideration of issues that may result in increased nutrient loading into the water; increased human activity, traffic, disruption of hydrological regimes and disturbance in the immediate vicinity of an important bird feeding and roosting area will be necessary. Development that may result in significant negative impacts and disturbance for the internationally important number of Annex 1 bird species that use the site will not be allowed.
- W MM 29 Ongoing monitoring to assess the real environmental impact of any development on the water quality and fishery element of the estuarine ecosystem will be required for Strategic Development Locations.
- W MM 30 Development proposed in this plan will only take place where appropriate and sustainable waste water infrastructure is in place or can be up-graded to accommodate the scale of development which will secure the objectives of the Shannon River Basin Management Plan and the protection of Natura 2000 sites with water dependent habitats or species. This must be provided and be operational in advance of the commencement of any discharges from development.
- Waste water infrastructure must be capable of treating discharges to ensure that water quality in the receiving river (The main River Shannon and/or its tributaries) does not fall below legally required levels. Sustainable Urban Drainage Systems (SUDS) will be required for all developments discharging within or upstream from Natura 2000 sites with water dependent habitats or species.

A detailed assessment of the site-specific elements of Variation No. 2 to incorporate the SIFP into the 2011-2017 CDP was undertaken and mitigation measures recommended. This mitigation is summarised in **Table 13-1** below. Also included in this table are the details of how the mitigation is incorporated into the CCDP 2023-2029. In many instances, the mitigation is already partially or fully provided for by other objectives and policies with the Clare County Development Plan. Where this is the case, these objectives are listed in the table. In other instances, the recommended mitigation is provided for by the amendments, additions and deletions to the objectives of the County Development Plan that were recommended in the SEA Environmental Report.

There are also a number of CCDP Objectives that ensure an overarching protection to the Natura 2000 network. For example, CDP3.3 is the core overarching objective concerned with the protection of European sites. In conclusion, with the application of the environmental safeguards specified in the CDP (in the form of CDP policies and objectives) and measures specified in the NIR for the SIFP and also the NIR for the adoption of the SIFP into the CCDP, it is considered that there is no potential for cumulative impacts to arise in association with the SIFP.

REPORT

Table 13-1: Site Specific Mitigation and their Incorporation into the Clare County Development Plan 2023 -2029

Measure Type	Recommended SIFP mitigation from previous CDP 2017- 2023 to be brought forward to the current CCDP 2023- 2029	Additional protective objectives within the current CCDP 2023 -2029 which are of relevance to the SIFP and which will support protection of European sites
Inishmurry/Cahiracon SDL		
Biodiversity Flora & Fauna	Any development is subject to site-specific assessment of potential impacts including, for example, HDA and EIA. These assessments should include all relevant ecological survey work. Any development is also subject to relevant licensing regimes. The design and construction of development should maintain current habitat where possible and should also consider the creation of habitat suitable to the location and prevailing species. In particular, buffer zones should be established in relation to wet pedunculate oak-ash wood present at several locations within the site. Suitable protection measures should also be incorporated in relation to Bottlenose Dolphins, birds, otter, badger and bat species. Operational and maintenance activities should be designed so as to minimise impact on biodiversity, flora and fauna.	<p>The following objectives in the CCDP 2023-2029 already provide for aspects of the recommended mitigation:</p> <ul style="list-style-type: none"> • Objective CDP3.3 is the overarching core objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. In addition, all plans/projects must comply with WFD objectives and support the 3rd cycle RBMP. • Objective CDP15.3 makes provision for the protection of European sites while Objective CDP15.4 stipulates requirement for plans and projects to undergo Appropriate Assessment. CDP15.10 makes provision for the requirement to comply with the EIA, SEA and Habitats Directives. • Objective CDP15.5 makes provision for the protection of NHAs and pNHAs and Objectives CDP15.6, CDP15.7, CDP15.8 & CDP15.9 makes provision for the protection of other environmental and ecological sites. These sites may represent important supporting habitats for the European sites and act as ecological stepping stones. • Objective CDP15.11 makes provision for consideration of environmental impacts during brownfield and contaminated land regeneration. • Objective CDP15.12 makes provision for the promotion and protection of biodiversity. CDP15.13 specifically references the importance of urban ecology protection and CDP15.15 references biodiversity within local authority lands. CDP15.14 makes provision for enhancement of ecological corridors and prevention of habitat fragmentation. • Objective CDP15.16 makes provision for the protection of inland waters including riparian zones. • Objective CDP15.17 makes provision for the protection of freshwater pearl mussels. • Objective CDP15.18 makes provision for the protection of peatlands. • Objective CDP15.19 & CDP15.20 makes provision for the protection of trees/hedgerows and woodlands. • Objective CDP15.21 makes provision for the protection of grasslands. • Objective CDP15.22 makes provision for the

These sites may represent important supporting habitats for the European sites and act as ecological stepping stones.
- Objective CDP15.11 makes provision for consideration of environmental impacts during brownfield and contaminated land regeneration.
- Objective CDP15.12 makes provision for the promotion and protection of biodiversity. CDP15.13 specifically references the importance of urban ecology protection and CDP15.15 references biodiversity within local authority lands. CDP15.14 makes provision for enhancement of ecological corridors and prevention of habitat fragmentation.
- Objective CDP15.16 makes provision for the protection of inland waters. This includes riparian zones and the protection of the fisheries resource supporting development in a sustainable manner.
- Objective CDP15.17 makes provision for the protection of freshwater pearl mussels.

REPORT

- Objective CDP15.18 makes provision for the protection of peatlands:
- Objective CDP15.19 & CDP15.20 makes provision for the protection of trees/hedgerows and woodlands.
- Objective CDP15.21 makes provision for the protection of grasslands.
- Objective CDP15.22 makes provision for the protection of wetlands (which includes saltmarshes).
- Objective CDP15.23-CDP15.25 makes provision for the protection of the Burren and associated ecosystems.
- Objective CDP15.26-CDP15.28 makes provision for the protection of UNESCO sites, tentative (natural/cultural heritage) list sites and dark sky reserves. These areas may also support European sites.
- Objective CDP15.29 makes provision to take all necessary steps to prevent the spread of invasive species.
- Finally, Objective CDP15.30 makes provision for green infrastructure and climate change which a number of points overlapping with aforementioned objectives.
- CDP12.1 is an overarching development plan objective for SIFP -Shannon Estuary which states that all proposed developments shall be in accordance with the SEA Directive, Birds and Habitats Directive, Water Framework Directive and Shellfish Waters Directive, Floods Directive and EIA Directive. All proposed developments shall incorporate the Mitigation Measures as contained in the SIFP (Volume 9 of the development plan) for ensuring the integrity of the Natura 2000 Network.
- Objective 12.13 relates to commercial fishing and aquaculture and supports facilitation and promotion of environmentally-sustainable commercial fishing and aquaculture, within the Areas of Opportunity for commercial fishing/aquaculture identified in the SIFP, which includes Clonderalaw Bay. Developments shall be in accordance with the Birds and Habitats Directive, WFD and all other relevant EC Directives.
- CDP12.14 relates to Building on the Shannon Estuary as an Environmental Asset and also ensures to ensure that all proposed developments shall be in accordance the Birds and Habitats Directive, Water Framework Directive and all other relevant EC Directives and do not compromise the achievement WFD objectives. It also seeks to facilitate the preparation of an Integrated Environmental Management Plan for the Shannon Estuary.

REPORT

Population & Human Health	<p>Any proposal for commercial fishing and aquaculture is subject to the relevant licensing regimes. The objectives and requirements for water body status outlined in the Shannon River Basin Management Plan should be considered when assessing proposals for commercial fishing and aquaculture licences in these areas. Clare County Council shall consider the potential effects on this area when assessing proposals for potentially polluting point and diffuse sources such as waste water treatment plants, on-site waste water treatment plants, industrial development etc.</p>	<p>Additional action taken to incorporate the recommended mitigation into the County Development Plan</p> <ul style="list-style-type: none"> • None required <p>The following objectives in the CCDP 2023-2029 already provide for aspects of the recommended mitigation:</p> <ul style="list-style-type: none"> • Objectives CDP4.1- 4.6 includes a range of objectives aimed at ensuring adequate water and waste water services with aim of the protection of water quality and European sites. • Objectives 12.1, 12.3 - 12.10, 12.12 - 12.14 aim to ensure that developments do not lead to environmental impacts and impacts to European sites specifically relating to the SIFP. • Objective 12.13 relates to commercial fishing and aquaculture and supports facilitation and promotion of environmentally-sustainable commercial fishing and aquaculture, within the Areas of Opportunity for commercial fishing/aquaculture identified in the SIFP, which includes Clonderlaw Bay. Developments shall be in accordance with the Birds and Habitats Directive, WFD and all other relevant EC Directives. • Objective CDP13.6 relates to the fishing industry and seafood sector. It supports the conservation of marine and freshwater resources and establishing a sustainable aquaculture and fishing industry. • Objective CDP13.7 relates to aquaculture specifically. It aims to support and promote the sustainable development of the aquaculture sector where it can be demonstrated no significant adverse effect on the environment including the integrity of the Natura 2000 network. • Objective 13.8 relates to the shellfish waters directive. It aims to work will local communities, relevant stakeholders and the Department of Agriculture, Food and the Marine to ensure the proper and successful implementation of the Shellfish Waters Directive on the County Clare coastline.
Water	<p>Any proposal for commercial fishing and aquaculture activity is subject to relevant licensing regimes and site-specific assessments. The objectives and requirements of the MSFD and the WFD (Shannon River Basin Management Plan) should be considered when assessing proposals for commercial fishing or aquaculture licences in these areas. Clare County Council shall consider the potential effects on this area when assessing</p>	<p>Additional action taken to incorporate the recommended mitigation into the County Development Plan</p> <ul style="list-style-type: none"> • None required. <p>The following objectives in the CCDP 2023-2029 already provide for aspects of the recommended mitigation:</p> <ul style="list-style-type: none"> • Objective CDP3.3 CDP3.3 is the overarching core objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject

REPORT

proposals for potentially polluting point and diffuse sources such as waste water treatment plants, on-site waste water treatment plants, industrial activity etc. The design and construction of development should aim to protect water quality and provide no impediment to the achievement of WFD, MSFD and shellfish water quality objectives. Operational activities should be designed and carried out so as to not impact on water body status.

to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. In addition, all plans/projects must comply with WFD objectives and support the 3rd cycle RBMP.

- Objectives CDP4.1- 4.6 includes a range of objectives aimed at ensuring adequate water and waste water services with aim of the protection of water quality and European sites.
- Objectives 12.1, 12.3 - 12.10, 12.12 - 12.14 aim to ensure that developments do not lead to environmental impacts and impacts to European sites specifically relating to the SIFP. This includes compliance with WFD objectives.
- Objective 12.13 relates to commercial fishing and aquaculture and supports facilitation and promotion of environmentally-sustainable commercial fishing and aquaculture, within the Areas of Opportunity for commercial fishing/aquaculture identified in the SIFP, which includes Clonderalaw Bay. Developments shall be in accordance with the Birds and Habitats Directive, WFD and all other relevant EC Directives.
- Objective CDP13.1 relates to marine and coastal developments and ensure compliance with WFD objectives *The National Marine Planning Framework (NMPF)* discusses environmental policies related to estuaries and references the Shannon Estuary. The NMPF has undergone SEA and AA. This objective acknowledges that development must consider the NMPF. Under CDP13.1 any marine development shall be in accordance with various directives including the Habitats and EIA.
- CDP13.2 supports the *Marine Planning and Development Management (MPDM) Act* and Maritime Area Regulatory Authority (MARA).
- CDP13.3 again ensure all new activities/developments are consistent with the policies of the National Marine Planning Framework.
- Objective 13.8 relates to the Shellfish Waters Directive. It aims to work will local communities, relevant stakeholders and the Department of Agriculture, Food and the Marine to ensure the proper and successful implementation of the Shellfish Waters Directive on the County Clare coastline.
- Objective CDP15.16 makes provision for the protection of inland waters their water quality and includes riparian zone and fisheries resources.

Additional action taken to incorporate the recommended mitigation into the County Development Plan

- None required

REPORT

Soils & Geology	Any development is subject to site-specific assessment of potential impacts and to relevant licensing regimes. This should include all relevant survey work and assessment work. The number and proximity of the licenced sites will need to be considered together in terms of in-combination effects	<p>The following objectives in the CCDP 2023-2029 already provide for aspects of the recommended mitigation:</p> <ul style="list-style-type: none"> Objective CDP15.6 requires that the importance of Geological Heritage Sites is recognised and the character and integrity of these sites is protected. <p>Additional action taken to incorporate the recommended mitigation into the County Development Plan</p> <p>None required, as current licencing and assessment regimes will kick-in as proposals for development arise and will ensure that any impacts are identified and mitigated for.</p>
Air & Climate	Any development is subject to site-specific assessment of potential impacts. This should include all relevant survey work and assessment work. Emissions to air are subject to licensing regimes which should reflect the requirements and targets of the Air Quality Framework Directive and the National Climate Change Strategy. The requirements of the International Regulations introduced to reduce emissions (including air emissions) should be considered. These include the International Maritime Organisation's (IMO) International Convention on the Prevention of Pollution from Ships (MARPOL) and the European Commission's EU Shipping Strategy. The Annex VI regulations and the amendments contained in the Sea Pollution Miscellaneous Pollution Act, 2006, should also be adhered to	<p>The following objectives in the CCDP 2023-2029 already provide for aspects of the recommended mitigation:</p> <ul style="list-style-type: none"> Objective CDP2.1 supports implementation of the National Climate Action Plan 2019, the National Climate Change Adaptation Framework and the National Mitigation Plan for climate change. Objective CDP12.2 support the implementation of the Clare Climate Change Adaptation Strategy 2019-2024 Objective CDP15.30 makes provision for green infrastructure and climate change which a number of points overlapping with other objectives within Chapter 15- Biodiversity. <p>Additional action taken to incorporate the recommended mitigation into the County Development Plan</p> <ul style="list-style-type: none"> None required, as current licencing and assessment regimes will kick-in as proposals for development arise and will ensure that any impacts are identified and mitigated for.
Cultural Heritage	Any development is subject to site-specific assessment including, for example, EIA. Any assessment shall include detailed impact statements that look at proposed developments/activities with regard to known or potential impacts, including visual impacts, on recorded or previously unrecorded/potential archaeology, both terrestrial and underwater. Available data pertaining to the cultural heritage should be consulted and reviewed, including the Shipwreck Inventory of Ireland, Ports and Harbours Archive, Topographical Files in the National Museum, cartographic sources, historical sources, results of previous surveys carried out in the area (geophysical/EIS/marine, etc.) and results of archaeological research and excavations. The Register of Monuments and Places (RMP), Topographical Files of the National Museum and the UNESCO Convention on the Protection of the Underwater Cultural Heritage (including the Annex) should be consulted. DAHG guidelines on assessing the potential for impact to underwater archaeology should be consulted. Any activity is also subject to relevant licensing regimes.	<p>The following objectives in the CCDP 2023-2029 already provide for aspects of the recommended mitigation:</p> <ul style="list-style-type: none"> Objective CDP16.1 is the overarching objective within Chapter 16 – Architectural, Archaeological and Cultural Heritage. It ensures the protection of architectural heritage structures in the Record of Protected Structures. Objective CDP16.2 requires the protection of all structures as set out in the Record of Protected Structures. This includes a review of the records and additional of maritime structures which may be of special interest: Objective CDP16.6 ensure the appropriate environmental assessments are conducted to assess impact of any heritage related projects. Objective CDP15.26 & CDP15.27 makes provision for the protection of UNESCO sites & tentative list sits. These areas may also support European sites. Objective 16.8 ensures the safeguard of sites, features and archaeological interests.

14 IN-COMBINATION ASSESSMENT - INTERACTION WITH OTHER PLANS AND PROJECTS

The assessment of in-combination effects with other plans or projects is a crucial and often difficult aspect of Article 6(3) assessment, particularly at the plan level.

Within the planning hierarchy the National Planning Framework (NPF) sets out Ireland's planning policy directions which is then implemented through Regional Spatial and Economic Strategies (RSEs), County Developments and then Local Area Plans. The CCDP is consistent with the NPF and RSEs and will guide lower-tier plans, such as Local Area Plans. These plans will be subject to their own environmental assessments. In order to be realised, projects within the CCDP will have to comply, as relevant, with various legislation, Policy Objectives, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework.

All projects within the Plan area and receiving environment will be considered in combination with any and all lower tier projects that may arise due to the implementation of the CCDP. Given the uncertainties that exist with regard to the scale and location of developments facilitated by the CCDP, it is recognised that the identification of in-combination effects is limited and that the assessment of in-combination effects will need to be undertaken in a more comprehensive manner at the project-level.

This step aims to consider the policies within which the CCDP is being developed and to identify at this early stage any possible in-combination effects of the CCDP with other plans and projects; see **Table 14-1** below. In theory, there are many other plans/ projects that interact with or have the potential to combine pressures and threats to European sites; however, the in-combination assessment is a matter of applying a practical and realistic approach.

In line with EC guidance, a stepwise approach has been taken to consideration of in-combination effects as follows:

- Identify plans / projects that might act in combination;
- Identify the types of impact that might occur;
- Define boundaries of the assessment;
- Identify pathways for impact; and
- Impact prediction and assessment.

REPORT

Table 14-1: Assessment of In-combination Effects

CCDP In Combination with...	Key Types of Impacts	Assessment of Effects
<p>National Development Plan 2018-2027 The National Development Plan sets out the investment priorities that will underpin the implementation of the National Planning Framework (NPF). This will guide national, regional and local planning and investment decisions in Ireland over the next two decades, to cater for an expected population increase of over 1 million people.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Disturbance to habitats/species; • Alterations to water quality and/or water movement; and • Introduction or spread of invasive species 	<p>The NDP is a high level budgetary and finance document which identifies priorities for capital investment. Given the nature of the capital investment the majority of the projects referenced and funded under the NDP have been or will be subject to EIA/AA. The NDP does not confer planning, it identifies strategic need. No in-combination effects are identified.</p>
<p>National Planning Framework (Ireland 2040 Our Plan) The National Planning Framework is a long-term strategy for the next 20 years and it will focus on ensuring compatibility between future growth of cities/ towns within Ireland alongside environmental sustainability. It is intended that the National Planning Framework will both provide the focus to guide and inform future planning and set the framework for integrated investment decisions. It is intended that the national policy will be detailed through the Regional Spatial and Economic Strategies in order to set out long term national, regional and local development frameworks from within which sectors will work together to ensure proper planning and sustainable development. Both the National Planning Framework and the Regional Spatial and Economic are being subject to the AA process.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Alterations to water quality and/or water movement; • Alteration to air quality; • Disturbance. 	<p>It is a policy⁵ of the National Planning Framework to ensure the resilience of our natural resources and cultural assets. Linkage to wider policies such as for European sites under the Birds and Habitats Directives and the Water Framework Directive is recognised and the need to set high level planning policies in protecting and making responsible use of our natural environment. The plan has been subject to AA and includes clear policy on avoidance of impacts to European sites.</p>
<p>Regional Spatial and Economic Strategies The three regional strategies seek to interpret and implement the NPF at a regional level.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Disturbance to habitats/species; • Alterations to water quality and/or water movement; and • Introduction or spread of invasive species. 	<p>The three regional strategies include clear policy and supporting actions to avoid and minimise impacts on European sites. They include similar commitments to only implement the policy base within the carrying capacity of the receiving environment as greater detail is known through the planning hierarchy. No in-combination effects are identified.</p>
<p>A Waste Action Plan for a Circular Economy – Ireland’s National Waste Policy 2020-2025 This is Ireland’s new national waste policy which, building on the previous policy, <i>A Resource Opportunity – waste management policy in Ireland</i>. The new action plan puts the focus on waste management further up the waste hierarchy, shifting away from disposal and treatment of waste towards circular product design, including reducing hazardous materials. The plan has over 200 measures across various sectors including the circular economy transition, protection of consumers, green procurement, plastics and packaging, municipal waste etc. It will also examine the feasibility of introducing an</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Disturbance to habitats/species; • Species mortality; • Alterations to water quality and/or water movement; • Alterations to air quality; and • Introduction or spread of invasive species. 	<p>As an initiative that primarily aims at developing the circular economy, there is no risk of likely significant in-combination effects from the policy. It seeks to provide tools and information to businesses, individuals and the public sector to influence behavioural change, support sustainable choices and inform policy. Therefore, it is not expected to conflict with the CCDP but to positively influence it going forward.</p>

⁵ http://www.housing.gov.ie/sites/default/files/publications/files/towards_a_national_planning_framework_december_2015.pdf

REPORT

CCDP In Combination with...	Key Types of Impacts	Assessment of Effects
<p>Extended Producer Responsibility Scheme (EPR) for paints, medicines and farm hazardous waste.</p>		
<p>The National Waste Prevention Programme (NWPP) This programme is part of an overarching national strategy published in 2014 'Towards a Resource Efficient Ireland'. The NWPP supports national-level, strategic programmes to prevent waste and drive the circular economy in Ireland. It aims to embed sustainability and climate action into different sectors by reducing water-use, waste and energy and produces annual reports.</p>	<ul style="list-style-type: none"> Increased resilience in habitats and species; Improved water quality; and Alteration to air quality 	<p>As an initiative that primarily aims at developing the circular economy, there is no risk of likely significant in-combination effects from the programme. It seeks to provide tools and information to businesses, individuals and the public sector to influence behavioural change, support sustainable choices and inform policy. Therefore, it is not expected to conflict with the CCDP but to positively influence it going forward.</p>
<p>Waste Framework Directive (2008/98/EC) and Amending Directive (EU) 2018/851 This Directive sets the basic concepts and definitions related to waste management, such as definitions of waste, recycling, recovery. It explains when waste ceases to be waste lays down some basic waste management principles. The Directive introduces the "polluter pays principle" and the "extended producer responsibility" (EPR). The revised directive places responsibility on EU member states to improve their waste management systems, to improve the efficiency of resource use, and to ensure that waste is valued as a resource. Some of the key issues addressed in the amending directive, include: minimum operating requirements for EPR schemes; strengthened rules on waste prevention and further obligations on waste generation; highlights examples of incentives to apply the waste hierarchy, such as landfill and incineration charges and pay-as-you-throw schemes; sets new municipal-waste-recycling targets; and specifically for hazardous waste, the requirement for member states to establish separate collection of textiles and hazardous waste generated by households.</p>	<ul style="list-style-type: none"> Improved habitats and species Improved water quality; and Alterations to water quality and/or water movement; Alterations to air quality Habitat loss or destruction; Habitat fragmentation or degradation; Disturbance to habitats/species; Species mortality; Alterations to water quality and/or water movement; Alterations to air quality; and Introduction or spread of invasive species. 	<p>In terms of the CCDP, this Directive incorporates provisions on hazardous waste and waste oils and includes two new recycling and recovery targets to be achieved by 2020. As it establishes major principles on how to handle waste, it will not have a negative impact on CCDP, but positively influence it. The Revised Waste Directive strengthens rules on waste prevention, and sets a target for Member States to establish separate household textile and hazardous waste collection by 2025.</p> <p>As the directives establish major principles on how to handle waste, it will not have a negative impact on the CCDP, but positively influence it.</p>
<p>Regional Waste Management Plans The three regional waste management plans include the Southern Region, Easter-Midlands Region and Connacht-Ulster Region. All provide a framework for the prevention and management of wastes in a safe and sustainable manner.</p>	<ul style="list-style-type: none"> Habitat loss or destruction; Habitat fragmentation or degradation; Disturbance to habitats/species; Species mortality; Alterations to water quality and/or water movement; Alterations to air quality; and Introduction or spread of invasive species. 	<p>All waste management plans were subject to AA processes. The primary purpose of the plans at regional level are to prevent the negative impacts of waste and manage and control pollution. No in-combination effects are identified.</p>
<p>National Wastewater Sludge Management Plan Sets out a nationwide standardised approach to ensure that treated wastewater sludge across the country is effectively managed, stored, transported and re-used or disposed of in a sustainable way.</p>	<ul style="list-style-type: none"> Habitat loss or destruction; Habitat fragmentation or degradation; Disturbance to habitats/species; Species mortality; Alterations to water quality and/or 	<p>The national strategy of the plan is for a sustainable approach to wastewater sludge management to ensure efficiency and ongoing improvement. An important objective is to avoid endangering human health or harming the environment, as in-combination effects are deemed null. The Plan aligns with CCDP in a positive way</p>

REPORT

CCDP In Combination with...	Key Types of Impacts	Assessment of Effects
	<ul style="list-style-type: none"> • water movement; • Alterations to air quality; and • Introduction or spread of invasive species. 	
<p>Sewage Sludge Directive Waste (86/278/ EEC) Seeks to encourage the use of sewage sludge in agriculture and to regulate its use in such a way as to prevent harmful effects on soil, vegetation, animals and man. The Directive also specifies rules for the sampling and analysis of sludges and soils.</p>	<ul style="list-style-type: none"> • Habitat fragmentation or degradation; • Disturbance to habitats/species; • Species mortality; • Alterations to water quality and/or water movement; • Alterations to air quality; and • Introduction or spread of invasive species. 	<p>This Directive's goal is to ensure public health is protected. The regulation of sewage sludge outlined in the directive requires that specific rules be followed. This Directive aligns with CCDP in a positive way and in-combination effects are deemed unlikely.</p>
<p>European Union Biodiversity Strategy to 2020 and revised Biodiversity Strategy to 2030 The new Biodiversity Strategy to 2030 aims to put Europe's biodiversity on the path to recovery by 2030 for the benefit of people, climate and the planet. In the context of the post-COVID-19 pandemic, it aims to build resilience to future threats, including climate change, security of food supplies, forest fires, outbreaks of disease and combating the illegal trade in wildlife. It aims to increase the Natura 2000 network, and will launch an EU restoration plan by the end of 2021. To enable implementation, it also aims to allow better tracking of progress, improving knowledge transfer and emphasising 'respect for nature' in public and business decision-making.</p>	<ul style="list-style-type: none"> • Increased resilience in habitats and species; • Improved water quality; and • Improved air quality 	<p>No risk of likely significant in-combination effects will result as the primary purpose of the Strategy is to halt the loss of habitat and species and aligns with environmental objectives of the CCDP.</p>
<p>Biodiversity Climate Adaptation Plan [arising from the National Climate Adaptation Framework] The framework provides strategic focus to ensure adaptation measures are taken across different sectors and levels of government to reduce Ireland's vulnerability to the negative impacts of climate change. There is a requirement for each government department to prepare sectoral plans. The DCHG completed this in relation to Biodiversity. The Biodiversity CAP sets out the key challenges for biodiversity and the actions needed to increase resilience of our native flora and fauna to the effects of climate change.</p>	<ul style="list-style-type: none"> • Increased resilience in habitats and species • Introduction or spread of invasive species • Improved Water quality 	<p>No risk of likely significant in-combination effects will result as the primary purpose of the plan is to protect biodiversity and improve the understanding of the link between climate change and environmental impacts. The actions and priorities arising from the plan are important for resilience in the longer term. Positive in combination effects as it supports resilience to climate change.</p>
<p>National Mitigation Plan 2017 Plan outlining the measures and actions of four specific sectors to mitigate climate change in the areas of transport, energy, the built environment and agriculture.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Alterations to water quality and/or water movement; • Disturbance • In-combination impacts within the same scheme. 	<p>The framework supports climate change mitigation and marks an initial step in transitioning Ireland to a low carbon, climate resilient and environmentally sustainable economy by 2050. The Plan was subject to SEA and AA. Mitigation measures from AA were developed to ensure no adverse effects from the plan. No in-combination effects are identified.</p>
<p>Biodiversity Action Plan 2017-2021 Ireland's third iteration of the Biodiversity Action Plan (BAP), for</p>	<ul style="list-style-type: none"> • Improved habitat and species protection 	<p>As the BAP is aimed at environmental protection, there are no in-combination effects.</p>

REPORT

CCDP In Combination with...	Key Types of Impacts	Assessment of Effects
<p>conserving and restoring Ireland's biodiversity covering the period 2017 to 2021. The aims are to achieve Ireland's Vision for Biodiversity through addressing issues ranging from improving the management of protected areas to increasing awareness and appreciation of biodiversity and ecosystem services.</p>		
<p>Water Framework Directive (2000/60/EC) and Second Cycle River Basin Management Plan 2018-2021 (Third Cycle in prep, 2021-2027)</p> <p>The primary purpose of this Directive and the various pieces of national legislation that have enacted through the implementation of River Basin Management Plans, is to achieve good status for all water bodies, with no deterioration in water body status. The RBMP sets out the PoM to achieve the objectives of the WFD.</p>	<ul style="list-style-type: none"> • Improved Water Quality; • Improved habitats; and • Increased resilience in habitats and species. 	<p>No risk of likely significant in-combination effects will result as the primary purpose of the Directive is to improve ecological status and includes achievement of objectives of the Habitats and Birds Directives. The second cycle River Basin Management Plan 2018-2021 was published together with a NIS including mitigation to offset negative effects. The same process would be required for the 3rd cycle RBMP which is in preparation.</p>
<p>Water Services Strategic Plan</p> <p>Irish Water has prepared a Water Services Strategic Plan (WSSP, 2015), under Section 33 of the Water Service No. 2 Act of 2013 to address the delivery of strategic objectives which will contribute towards improved water quality and WFD requirements. The WSSP forms the highest tier of asset management plans (Tier 1) which Irish Water prepare and it sets the overarching framework for subsequent detailed implementation plans (Tier 2) and water services projects (Tier 3). The WSSP sets out the challenges we face as a country in relation to the provision of water services and identifies strategic national priorities. It includes Irish Water's short-, medium- and long-term objectives and identifies strategies to achieve these objectives. As such, the plan provides the context for subsequent detailed implementation plans (Tier 2) which will document the approach to be used for key water service areas such as water resource management, wastewater compliance and sludge management. The WSSP also sets out the strategic objectives against which the Irish Water Capital Investment Programme is developed. The current version of the CIP outlines the proposals for capital expenditure in terms of upgrades and new builds within the Irish Water owned asset</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Disturbance to habitats/species; • Alterations to water quality and/or water movement; and • Introduction or spread of invasive species. 	<p>The WSSP has undergone SEA and AA, which highlighted the need for additional plan/project environmental assessments to be carried out at the tier 2 and tier 3 levels. no in-combination effects are identified.</p>
<p>Catchment Flood Risk Assessment and Management (CFRAM) Programme, under the Floods Directive</p> <p>The Office of Public Works (OPW) is responsible for the implementation of the Floods Directive 2007/60/EC which is being carried out through a Catchment based Flood Risk Assessment and Management (CFRAM) Programme. As part of the directive Ireland is required to undertake a Preliminary Flood Risk Assessment, to identify areas of existing or potentially significant future flood risk and to prepare flood hazard and risk maps for these areas. Following this, Flood Risk Management Plans (FRMPs) are developed for these areas setting objectives for managing the flood risk and setting out a</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Alterations to water quality and/or water movement; • Disturbance; • In-combination impacts within the same scheme 	<p>CFRAM Studies and their product Flood Risk Management Plans, have undergone Appropriate Assessment. Any future flood plans will have to take into account the design and implementation of water management infrastructure as it has the potential to impact on hydromorphology and potentially on the ecological status and favourable conservation status of water bodies. The establishment where flooding is occurring is an important consideration for the CCDP and spatial planning in general, with regard to the siting of houses, services and infrastructure. The AA of the CFRAMs considered the potential for impacts from hard engineering</p>

REPORT

<p>prioritised set of measures to achieve the objectives. The CFRAM programme is currently being rolled out and Draft Flood Risk Management Plans have been prepared. These plans have been subject AA.</p>		<p>solutions and how they might affect hydrological connectivity and hydromorphological supporting conditions for protected habitats and species. no in-combination effects are identified.</p>
<p>Industrial Emissions Directive (2010/75/EU) This is the main EU instrument regulating pollutant emissions from industrial installations. The IED aims to achieve a high level of protection of human health and the environment taken as a whole by reducing harmful industrial emissions across the EU. The IED is based on several pillars, in particular (1) an integrated approach, (2) use of best available techniques, (3) flexibility, (4) inspections and (5) public participation. The IED sets out the licensing procedures and criteria for certain industrial activities, aiming to reduce harmful emissions, in particular through the application of Best Available Techniques (BAT) in terms of environmental performance. BATs are being continually revised with BAT conclusions then being adopted by the EC as Implementing Decisions. IED licences also make specific provision for the prevention of waste and for its proper management.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Disturbance to habitats/species; • Species mortality; • Alterations to water quality and/or water movement; • Alterations to air quality; and • Introduction or spread of invasive species. 	<p>The primary purpose of this Directive is to ensure the prevention and control of pollution by giving priority to intervention at source. no in-combination effects are identified.</p>
<p>EU Green Deal 2050 In response to the challenges facing Europe, the European Green Deal was adopted for the EU in December 2019. Termed a new growth strategy based on clean products and technologies, the European Green Deal is committed to working towards a climate-neutral society by 2050. It has an action plan/ roadmap of actions, of which the key objectives are to: increase the efficient use of resources by moving to a clean, circular economy; as well as to restore biodiversity and cut pollution. It also aims to support innovation of industry to increase circularity. It has a timetable of actions, including producing the EU Circular Economy Action Plan, Chemicals Strategy for Sustainability, which were published in 2020.</p>	<ul style="list-style-type: none"> • Increased resilience in habitats and species; • Improved habitat and species protection; and • Improved air and water quality. 	<p>The key aim of the Action Plan is sustainability in order to deliver circularity. This plan will be complimentary to the CCDP and as such no in-combination effects are identified.</p>
<p>Restriction on the Use of Certain Hazardous Substances (RoHS) Directive (2011/65/EU) This directive limits the concentrations of certain hazardous substances in electrical and electronic equipment (EEE), with some exemptions. It aims to protect the environment and human health, particularly workers in waste electrical and electronic equipment (WEEE) recycling facilities. The reduction in the use of the specified hazardous substances at source has positive impacts by allowing increased recycling of WEEE products.</p>	<ul style="list-style-type: none"> • Increased resilience in habitats and species; • Improved air and water quality 	<p>The primary purpose of this Directive is to protect human health and the environment, no in-combination effects are identified.</p>
<p>EU's Chemicals Strategy for Sustainability Towards a Toxic-Free Environment Global chemical use is projected to double by 2030, and while essential for life, chemicals can also have hazardous properties and</p>	<ul style="list-style-type: none"> • Increased resilience in habitats and species; • Improved air and water quality. 	<p>The primary purpose of this Strategy is to set out how hazardous waste is handled in terms of legislation no in-combination effects are identified.</p>

REPORT

CCDP In Combination with...	Key Types of Impacts	Assessment of Effects
<p>can be toxic to human health and the environment. As such, the EU has prepared this strategy which also ties into the Green Deal and the Circular Economy Action Plan. It aims for zero pollution, including reducing hazardous waste streams, and to protect human and environmental health. It aims to streamline the coherence between waste, chemicals and products legislation, aiming to close gaps in how hazardous substances may be handled differently under different legislation.</p>		
<p>The EU Sustainable Development Strategy (EU SDS) and Our Sustainable Future: A Framework for Sustainable Development in Ireland (2012) (national)</p> <p>The overarching sustainable development policy document in the EU. During the 2009 review the EU noted a number of unsustainable trends that require urgent action including a decrease in high energy consumption in the transport sector in line with the 2020 Strategy. At national level, Our Sustainable Future: A Framework for Sustainable Development in Ireland (2012) has followed the model used in the EU SDS.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Species mortality; • Disturbance to habitats/species; • Alterations to water quality and/or water movement; and • Introduction or spread of invasive species. 	<p>There is no potential for in-combination effects with the CCDP. The strategy aims to manage resources more responsibly and thus would complement aspects of the CCDP. The main thrust of the plan is positive and would not be expected to conflict with the CCDP but to positively influence it going forward.</p>
<p>Roadmap to a Resource Efficient Europe</p> <p>Outlines how we can transform Europe's economy into a sustainable one by 2050. It proposes ways to increase resource productivity and decouple economic growth from resource use and its environmental impact.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Disturbance to habitats/species; • Species mortality; • Alterations to water quality and/or water movement; • Alterations to air quality; and • Introduction or spread of invasive species. 	<p>There is no potential for in-combination effects with the CCDP. The roadmap aims to tackle challenges and manage resources more responsibly complementing aspects of the CCDP. The main thrust of the plan is positive and would not be expected to conflict with the CCDP but to positively influence it going forward.</p>
<p>National Energy and Climate Plan 2021-2030</p> <p>The plan brings together energy and climate planning and describes how Ireland will achieve the EUs main climate targets. The plan must cover the key areas of (i) energy security; (ii) internal energy market; (iii) energy efficiency; (iv) decarbonisation; and (v) research, innovation and competitiveness.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Alterations to water quality and/ or water movement; • Disturbance; • In-combination impacts within the same scheme 	<p>The plan supports decarbonisation and as such the main thrust of the plan is positive as it addresses climate change aspects. The Plan has been subject to SEA and AA screening.</p>
<p>Climate Action Plan 2021</p> <p>The Climate Action Plan 2021 provides a detailed plan for taking decisive action to achieve a 51% reduction in overall greenhouse gas emissions by 2030 and setting us on a path to reach net-zero emissions by no later than 2050, as committed to in the Programme for Government and set out in the Climate Act 2021.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Species mortality; • Disturbance to habitats/species; • Alterations to air quality; • Alterations to water quality and/or water movement; and • Introduction or spread of invasive species 	<p>The main thrust of the plan is positive and there is potential for positive in combination effects as it supports long term resilience to climate change.</p>

REPORT

CCDP In Combination with...	Key Types of Impacts	Assessment of Effects
<p>National Mitigation Plan 2017 Plan outlining the measures and actions of four specific sectors to mitigate climate change in the areas of transport, energy, the built environment and agriculture.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Alterations to water quality and/or water movement; • Disturbance • In-combination impacts within the same scheme. 	<p>The framework supports climate change mitigation. Mitigation measures from AA were developed to ensure no adverse effects from the plan. No in-combination effects are identified.</p>
<p>The EU Policy Framework for Climate and Energy in the period from 2020 to 2030 Sets targets for the period 2020 to 2030: Target of 27% renewable energy in the EU; Increase energy efficiency by 27% by 2020; and Reaching electricity interconnection target of 15% between EU countries by 2030.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Species mortality; • Disturbance to habitats/species; • Alterations to air quality; • Alterations to water quality and/or water movement; and • Introduction or spread of invasive species 	<p>This policy framework underwent impact assessment before publishing. The overall drive is to increase the use of renewable energy, increase energy efficiency and reduce greenhouse gas emissions. Therefore, no in-combination effects are identified.</p>
<p>Energy Roadmap 2050 This roadmap does not set specific energy targets at this point but does aim to achieve an 80% to 95% reduction in greenhouse gases compared to 1990 levels by 2050.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Species mortality; • Disturbance to habitats/species; • Alterations to air quality; • Alterations to water quality and/or water movement; and • Introduction or spread of invasive species. 	<p>The key aim of the roadmap is a guide to a low carbon Europe. This plan will be complimentary to the CCDP and as such no in-combination effects are identified.</p>
<p>Eight Environmental Action Programme (2021-2030) The 8th EAP aims to accelerate the transition to a climate-neutral, resource-efficient and regenerative economy. It recognises that human wellbeing and prosperity depend on the healthy ecosystems within which we operate and sets out six priority objectives (i) climate neutrality by 2050 (ii) reducing vulnerability to climate change (iii) circular economy (iv) zero-pollution ambition (v) enhancing natural capital and (vi) reducing environmental and climate pressures.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Alterations to air quality; • Alterations to water quality and/or water movement; and • Disturbance to habitats/ species. 	<p>As the EAP is aimed at environmental action protection, no in-combination effects are identified.</p>
<p>National Policy Framework on Alternative Fuels Infrastructure in Transport 2017-2030 Supports the provision of refuelling infrastructure for alternative fuels, common technical standards and appropriate consumer information. The alternative fuel options could include electricity, hydrogen, biofuels and natural gas.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Species mortality; • Alterations to air quality; • Disturbance to habitats/species; • Alterations to water quality and/or water movement; and • Introduction or spread of invasive 	<p>This underwent SEA and AA. While there is potential for land use change associated with the policy, the AA and SEA both provided mitigation to avoid adverse effects. This plan would not be expected to conflict with any aspects of the CCDP but to positively contribute to it going forward.</p>

REPORT

<p>International Convention for the Prevention of Pollution from Ships (MARPOL Convention) Air pollution from shipping is currently regulated by the MARPOL Convention, specifically Annex VI which limits the main air pollutants from ships, SO_x, NO_x, PM, and prohibition of the deliberate release of ozone-depleting substances. Incineration on ships and emissions of VOCs are also regulated. The objectives are for progressive reductions in air pollution from shipping. In 2020, new limits on the sulphur content in ship fuels aims to further significantly reduce SO_x emissions.</p>	<ul style="list-style-type: none"> Habitat loss or destruction; Habitat fragmentation or degradation; Species mortality; Alterations to water quality and/or water movement; and Alterations to air quality. 	<p>The objectives of the convention are for progressive reductions in air pollution from shipping. In 2020, new limits on the sulphur content in ship fuels aims to further significantly reduce SO_x emissions. No in-combination effects.</p>
<p>Rural Development Programme 2014-2020 Provides a new suite of rural development measures designed to enhance the competitiveness of the agri-food sector, achieve more sustainable management of natural resources and ensure a more balanced development of rural areas. Includes provisions under GLAS; Bio-Energy; nutrient management planning; "Carbon Navigator" software tool</p>	<ul style="list-style-type: none"> Habitat loss or destruction; Habitat fragmentation or degradation; Disturbance to habitats/species; Species mortality; Alterations to water quality and/or water movement; Alterations to air quality; and Introduction or spread of invasive species. 	<p>The Rural Development Plan (RDP) was subject to its own AA. Mitigation in the RDP requires that Appropriate Assessment is to be carried out for all individual building, tourism or agricultural reclamation projects, stakeholder engagement and site-based monitoring. With the required mitigation in the RDP, no in-combination effects are identified.</p>
<p>Freshwater Pearl Mussel Plans 2009-2015 These plans for Irish Freshwater Pearl Mussels were prepared as part of the 1st Cycle of River Basin management Plans for 2009-2015. The plan provides a programme of measures required to improve the habitat of the freshwater pearl mussel so that it can attain favourable conservation status. This includes the Cloon Sub -Plan 2010</p>	<ul style="list-style-type: none"> Improved habitat and species protection 	<p>The draft Sub-basin Management Plans identify issues relevant to mussel conservation and propose realistic solutions. This includes a plan for the Cloon Catchment within Co. Clare. The aim is the plan is to conserve, manage and protect FWPM and no in-combination effects are identified.</p>
<p>Forestry and Freshwater Pearl Mussel Plan (DAFM, in preparation) The objective of the draft Plan is to eliminate, reduce or mitigate diffuse and point sources of sediment and nutrients, and the disruption of the natural hydrological regime, potentially arising from forest activities undertaken within the Plan's area, to ensure that these activities do not threaten the achievement of the conservation objectives for the Special Areas of Conservation involved.</p>	<ul style="list-style-type: none"> Improved habitat and species protection 	<p>The plans core principle is the protection of FWPM from forestry activities. The plan is undergoing SEA and AA process. No in-combination effects are identified.</p>
<p>2030 Agenda for Sustainable Development ("Transforming our World"). The 2030 Agenda encourages countries to integrate the Sustainable Development Goals (SDGs) into planning and policy, on both a national and international level. As a whole-of-government initiative overseen by DECC, all Ministers retain responsibility for implementing the individual SDGs relating to their departments. As part of our oversight role, DECC was assigned responsibility for developing the SDG National Implementation Plans. The Plans set out</p>	<ul style="list-style-type: none"> Increased resilience in habitats and species; Improved habitat and species protection; and Improved air and water quality 	<p>No in-combination effects are identified. The agenda aligns with sustainable objectives within the CCDP.</p>

REPORT

CCDP In Combination with...	Key Types of Impacts	Assessment of Effects
<p>arrangements for interdepartmental coordination, stakeholder engagement and periodic progress reporting on all 169 targets. The first Sustainable Development Goals National Implementation Plan was published in 2018. The second Plan, which will include a progress report on the first Plan, is due to be published in 2021.</p>		
<p>Food Wise 2025 Food Wise sets out the strategic plan for the development of the Irish agri-food sector over the next decade. Growth projections include increasing the value added in the agri-food, fisheries and wood products sector by 70% to in excess of €13 billion. Sustainable production at its core setting out a range of specific recommendations aimed at managing the projected growth in a sustainable way. There is a strong commitment to the measurement and monitoring of the sustainability credentials of the sector as the strategy rolls out.</p>	<ul style="list-style-type: none"> • Habitat loss or destruction; • Habitat fragmentation or degradation; • Disturbance to habitats/species; • Species mortality; • Alterations to water quality and/or water movement; • Alterations to air quality; and • Introduction or spread of invasive species. 	<p>Subject to AA and SEA. The NIS concluded that “The Assessment identified that the majority of the actions promoted positive behaviour and that very few provided clear links to adverse impacts on European sites. The few potential impacts were addressed by reference to the safeguards that applied to those specific sectors and impact types, at a local level. Whilst this was a strategic and national-scale series of actions, there were many different mechanisms identified whereby potential adverse impacts are addressed at a local scale”. No in-combination effects are identified.</p>
<p>Marine Strategy Framework Directive (MSFD) (2008/56/EC) The aims of the MSFD are to protect the marine environment across Europe through achieving and maintaining good environmental status of marine waters by 2020, and acts as complimentary legislation to the WFD. To achieve this goal the directive has set out marine regions; Ireland falls within the North-east Atlantic Ocean Region and for the purposes of the MSFD Ireland is required to produce a Maritime Spatial Plan (MSP). Ireland’s draft “National Marine Planning Framework” (i.e., first MSP) was launched for public consultation in November 2019 and the final version is due soon.</p>	<ul style="list-style-type: none"> • Increased resilience in habitats and species; • Improved habitat and species protection; and • Improved water quality 	<p>The MSP core principle is the protection of marine environment. No in-combination effects are identified.</p>

15 SUMMARY OF THE PROPOSED AMENDMENTS TO THE DRAFT PLAN

15.1 Assessment of the Proposed Amendments to the Plan

Following the end of the consultation, on foot of the review of submissions, a series of Proposed Amendments to the draft plan were identified. Clare County Council published the Proposed Amendments to the draft Clare County Development Plan in Q4 of 2022. The proposed amendments are accompanied by an Addendum to the Environmental Report which provides information on the likely significant effects on the environment of implementing the proposed amendments, prepared in accordance with the Planning and Development (Strategic Environmental Assessment) Regulations 2004 (as amended) and Article 6 of the Habitats Directive 92/43/EEC. The Proposed Amendments to the Draft Clare County Development Plan 2023-2029 and the associated addendum went on public display on Monday 28th November 2022 to Tuesday 3rd January 2023. The reporting in relation to the assessment is included in **Appendix D** to this NIR.

In summary, the majority of proposed material amendments were considered to have no additional likely significant effects.

15.2 Minor Modifications to the Proposed Amendments

Following the end of the second consultation period in January 2023, a Chief's Executive's (CE) Report was prepared and submitted to the Elected Members in accordance with Section 12(8) of the Planning and Development Act 2000 (as amended) and summarises the submissions received and outlines the Chief Executive's recommendations. The Elected Members resolved to make the Clare County Development Plan 2023-2029 based on their consideration of the CE report at a Special Council meeting held on 9th March 2023. The resolution is available on Clare County Council website.⁶ Minor modifications were made to the proposed amendments during the resolution process and were assessed in the NIR for likely significant effects and this is also recorded in **Appendix D**. In summary, none of the proposed minor modifications were considered to have potential for likely significant effects.

⁶ <https://clarecdp2023-2029.clarecoco.ie/stage3-amendments/consideration/>

16 CONCLUSION

This Natura Impact Report on the CCDP 2023-2029 (which includes the RES) records the assessment undertaken during the preparation of the CCDP. With the implementation of the robust environmental protection objectives in the Written Statement, and with the strict application of all mitigation measures specified in this NIR covering both the CCDP objectives and Municipal District Settlements (**Appendix B, D & E**), it can be ascertained that the CCDP 2023-2029 will not adversely affect the integrity of any European site(s), alone or in combination with other plans and projects.

It is noted that the CCDP is a strategic spatial plan which sets out the overall strategy for the proper planning and sustainable development for County Clare, particularly in relation to land-use zoning, and to ensure a strategic approach to zoning that allows the appropriate level of development throughout the plan area. The CCDP however does not confer planning but instead provides the policy framework for lower tier plans such as local area plans (LAPs) and projects. These lower tier plans and projects will include additional necessary detail and provide more detailed planning policies for areas where significant development and change is anticipated. The lower tier plans and projects will themselves also be subject to Appropriate Assessment in due course as more project and location detail is developed.

Notwithstanding this, a precautionary approach has been applied in order to ensure that these lower tier plans and projects do not themselves give rise to effects on the integrity of European sites, by explicitly including a number of safeguards, which will guide the lower tier plans and projects in the protection of the sites as discussed below.

Objective **CDP3.3** is the overarching core objective regarding the protection of the European site network (and also NHAs) and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to determine the potential for likely significant effects upon European sites in accordance with the EU Habitats Directive. In addition, all plans/projects must comply with Water Framework Directive objectives (many of which supports the Habitats Directive) and support the most current River Basin Management Plan.

This core objective sets the narrative of the CCDP for the protection of European sites. It explicitly states that at the project consent stage if it appears that any element of the CCDP cannot be implemented without adverse effects on the integrity of a European site and which cannot be adequately mitigated then the proposals will only make provision for the level and location of development for which it can be concluded that there will be no adverse effect.

This core objective is then supported by a number of biodiversity objectives supporting European sites and ensuring compliance with appropriate directives and legislation such as; Objective **CDP15.3** makes provision for the protection of European sites and compliance with the EU Habitats Directive, while Objective **CDP15.4** stipulates requirement for plans and projects to undergo Appropriate Assessment. **CDP15.10** makes provision for the requirement to comply with the EIA, SEA and Habitats Directives.

Biodiversity objectives also recognise the importance of supporting habitats for European sites which may act as ecological stepping stones or reservoirs for habitats and species. For example, Objective **CDP15.5** makes provision for the protection of NHAs and pNHAs and Objectives **CDP15.6, CDP15.7, CDP15.8 & CDP15.9** makes provision for the protection of other environmental and ecological sites such as the Burren National Park. Objective **CDP15.16** makes provision for the protection of inland waters their water quality and includes reference to maintaining riparian buffer zones. Objective **CDP15.26 -CDP15.28** makes provision for the protection of UNESCO sites, tentative (natural/cultural heritage) list sites and dark sky reserves. All these areas typically directly or indirectly support European sites while **CDP15.12** supports biodiversity net gain in any new plan/project/policies to leave biodiversity in a better state than before.

The importance of ecological corridors which again may support European site is further stated within objective **CDP15.14** making provision for enhancement of ecological corridors and prevention of habitat fragmentation (including migratory routes for birds and bats).

In addition, the CCDP contains biodiversity objectives supporting habitat and species such as **CDP15.18 - CDP15.25** makes provision for the protection of various habitat types and which may support European sites (e.g., peatlands, grasslands, wetlands, hedgerows, woodlands, inland waters, limestone, cliffs). Objective

REPORT

CDP15.17 makes provision for the protection of freshwater pearl mussels. Objective **CDP15.12a** makes provision for the promotion and protection of biodiversity and **CDP15.12c** supports the All-Ireland Pollinator Plan. Objective **CDP15.29** makes provision to take all necessary steps to prevent the spread of invasive species which can be negative indicators for some European sites.

County Clare is a particular stronghold for Irelands only Annex II bat species, the Lesser horseshoe bat and therefore the CCDP contains a number of objectives with the aim for the protection of this species. For example, Objective **CDP15.12d** recognises the importance of connected landscape features such as treelines and hedgerows for the free movement of bats and ensures there should be no net loss of bat habitats within 2.5km of known roosts. Objective **CDP4.17 & CDP4.18** relate specifically to derelict buildings and include reference to bats and protected species within these structures and they must be considered. **CDP11.42** relates to light pollution and ensures external lighting should be designed taking the *Bat Conservation Ireland Guidance Notes for: planners, engineers, architects and developers on bats and lighting* into consideration. Old buildings and protected structure may contain bat roosts and **Objective CDP16.6** is specifically related to protected structures and biodiversity. It ensures the consideration of protected sites and species when works to protected structures are proposed. It also ensures that any decision making on heritage related projects and developments is informed by an appropriate level of environmental assessment. **Objective CDP17.10d** also relates to derelict buildings requiring that any works shall be in compliance with the Habitats Directive.

The importance of urban environments is also specified within objectives specifically mentioning these areas. Objective **CDP15.11** makes provision for consideration of environmental impacts during brownfield and contaminated land regeneration. **CDP15.13** specifically references the importance of urban ecology protection and **CDP15.15** references biodiversity within local authority lands.

Development within marine and coastal environments and their protection is considered in a number of objectives. For example; **CDP12.14** relates to building on the Shannon Estuary as an Environmental Asset and reiterates that all proposed developments shall be in accordance the Birds and Habitats Directive, Water Framework Directive and all other relevant EC Directives and do not compromise the achievement of their relevant objectives. It also seeks to facilitate the preparation of an Integrated Environmental Management Plan for the Shannon Estuary.

Objective **CDP13.1** relates to marine and coastal developments and ensure compliance with WFD objectives and the National Marine Planning Framework (NMPF) which includes environmental policies related to estuaries and references the Shannon Estuary. The NMPF has undergone SEA and AA. This objective acknowledges that development must consider the NMPF. **CDP13.1** also requires that any marine development shall be in accordance with various directives including the Habitats and EIA directives. **CDP13.2** supports the Marine Planning and Development Management (MPDM) Act and Maritime Area Regulatory Authority (MARA). **CDP13.3** ensures all new activities/developments are consistent with the policies of the National Marine Planning Framework.

Finally, in terms of energy and climate change, Objective **CDP2.1** supports the National Climate Action Plan and Adaptation Framework, **CDP15.30** makes provision for green infrastructure and climate change which a number of points overlapping with aforementioned objectives. While within the Renewable Energy Strategy, the objective **RES1.1A -G** is an overarching objective within Chapter 1 regarding environmental protection, biodiversity enhancement and protection of the European Site network. It ensures that the appropriate environmental statutory assessment process is followed. The inclusion of this objective in the RES was an iterative process working in tandem with the SEA and NIR of the RES.

Throughout the assessment process it was identified that some proposed zonings were within European sites or adjacent. For the majority of these areas, it was recommended to re-zone out of the site or insert a buffer. These recommendations were largely accepted in full, please see **Table 16-1** below for an example of these recommendations. In addition, following public consultation there were a number of requests to rezone parcels. Each of these requests were assessed. Where potential for adverse effects upon European site(s) were identified and could not be avoided it was recommended not to rezone these lands. In other cases, it was recommended to alter the zoning of lands with mitigation as per Volume 3. These recommendations were incorporated into the CCDP (see **Appendix E** for full assessment).

REPORT

Table 16-1: Example of recommendations which were incorporated into the CCDP.

Settlement	Zoning	Recommendation
Ennis	Uncoded AG	Following review uncoded AG parcels bordering Lough Girroga were not rezoned for residential in order to help preserve ecological corridors and sensitive habitats.
Ennis	COM8	Following consultation, it was recommended that this was rezoned to allow 60m between the River Fergus and COM8 and 30m buffer between the SAC and COM8. Area rezoned to incorporate this.
Ennis	LDR11	Following review LDR11 was rezoned to a smaller parcel in order to preserve ecological corridors to Lesser horseshoe bat SAC and allow buffer space between development and woodland/turlough habitats.
Ennis	AG to R	Proposed change of an AG zoning to Residential removed owing to potential adverse effects upon Lesser horseshoe bat.
Ennistymon	AG2	Following review AG2 zoning amended to allow a 10m buffer between parcel and river
Kilkee	R8	Following review, the parcel has not been zoned and parcel remains part of OS25 to allow a more connected open space along the headland for biodiversity
Spanish point	VGA2	Following review VGA2 has been rezoned to allow a 10m riparian buffer along the river.
Doolin	1x uncoded MAR/HAR	Original zoned parcel was extended and it was recommended to include a buffer space between coastline and extended area. This was been incorporated into the CCDP.
Lisdoonvarna	1x uncoded OS	Following review, a further uncoded OS was added extending OS11 along the river to allow a buffer space between the existing residential zoning to east and the river.
Lisdoonvarna	R2	Following review, a 10m buffer space was zoned between the Aille river and R2 to allow for the protection of riparian zone.
Lisdoonvarna	R3	R3 was removed from zoning and area remains part of OS11 to protect riparian treeline.
University of Limerick	University Zone	Following review, a 30m riparian buffer has been provided along the length of the site south of zoning.
University of Limerick	ENT	Following review this parcel boundary was reduced to exclude woodland areas.

At the end of the process six settlements contain zonings (with no pre-existing development) within European sites. These are Ballinruan, Feakle, Carrigaholt, Kilanena, Caher and Boston. The later, Boston is located entirely within a European site. Within the individual settlement statements, it is acknowledged that any development must ensure no adverse effects on the integrity of European sites. The statements for each settlement are summarised below in **Table 16-2**.

The NIR mitigation for these settlements includes but is not limited to “*Any development proposal shall undergo the AA process (AA screening and NIS as deemed necessary) including habitat assessments. The proposal shall clearly identify the spatial extent of any development and shall address the potential for increased disturbance (both in isolation and in combination with other plans/projects) upon the European site. Proposals that cannot avoid adverse effects upon European sites alone or in combination shall not be permitted*”. Further mitigation is stipulated within the NIR specifically relating to each zoned parcel and the European site it intersects.

All mitigation within the NIR has been adopted into the CCDP which includes the mitigation stipulated for the settlements discussed above. Within the CCDP it is acknowledged that “*It is necessary to incorporate or assimilate any mitigation measures or measures proposed to avoid or ameliorate the (potential) adverse effects on European sites into the policy or detail of the Clare County Development Plan 2023-2029. More importantly, notwithstanding the proposed mitigation measures or other proposals to avoid impacts contained in the Natura Impact Report, if a development plan has the potential for a significant adverse impact on the integrity of a European site, it cannot be adopted unless it is established that there are*

REPORT

imperative reasons of overriding public interest (IROPI), including those of a social or economic nature, and/or reasons of human health and public safety”.

In addition, in each of the Volume 3 Settlement Statements where the zoning is contained it states the following “The appropriate assessment process, Strategic Environmental Assessment and Strategic Flood Risk Assessment which have been undertaken in tandem with the preparation of this Development Plan have informed the formulation of the plan objectives and land-use zonings. Where mitigation measures have been recommended, they have been incorporated accordingly.

Details of all proposed mitigation measures are included in the respective reports included in Volume 10 of the CCDP, and specifically as follows:

Mitigation Measures	References (Volume 10a NIR, 10b(ii) SEA)
Overarching Mitigation Measures	SEA Vol. 10b Chapter 9
Settlement Measures	
SEA Measures	Vol. 10b Chapter 9 Vol. 10b Appendix B
AA Measures	Vol. 10a Appendix C

Table 16-2: Summary of settlement statement for zonings within European sites.

Settlement	Zoning	Text within Settlement Statement regarding European sites.
Boston	Settlement lies within East Burren Complex SAC	Future development must ensure that there are no adverse effects on the integrity of the SAC or the integrity of any other European site as a result of the proposed development. Accordingly, objectives for European sites and appropriate assessment as set out in Volume 1 of this Plan will apply to any future development proposals in this area.
Feakle	MU1 (Part of zoning in SPA with no pre-existing development here)	The entire settlement of Feakle is located within the Shannon-Graney/Scarriff Margaritifera (Freshwater Pearl Mussel (FPM)) Sensitive Area. While the current status of the FPM in this catchment is unknown it does contain previous records and therefore any proposed development will need to take into consideration the potential negative effects on this species and its habitat. The village is adjoining the Slieve Aughty Mountains SPA, and it is therefore essential that no development is permitted that will negatively impact on the integrity of the SPA. Any plan or project with the potential to impact on the integrity of the SPA should be screened for appropriate assessment.
Carrigaholt	MU1 (Very small corner of zoning within SAC with no pre-existing development here)	Carrigaholt adjoins the Lower River Shannon Special Area of Conservation (SAC), with the River Shannon and River Fergus Estuaries Special Protection Area (pSPA) located in close proximity to the village. Accordingly, objectives set out in Volume 1 of this Plan relating to European sites and to appropriate assessment will apply to any future development proposals in this area. Future development must ensure there are no adverse effects on the SAC's and SPA's site integrity, or the integrity of any other European site as a result of the proposed development.
Ballinruan	C1, COM1 VGA1, VGA3 (Part of zoning in SPA with no pre-existing development here)	Any future residential development should be subject to the requirements of the Habitats Directive given the proximity of the village to the Slieve Aughty designated European Site. See also the Natura Impact Report for further relevant zonings within mitigation measures and recommendations at site and project level. In addition to compliance with the policies and objectives of Volume 1, specific objectives apply to the following lands:
Killanena	COM1 (Part of zoning in SPA with no pre-existing development here)	The entire settlement of Killanena is located within the Shannon – Graney/Scarriff River catchment which has been identified by the National Parks and Wildlife Service (NPWS) as a “Catchment with previous records of Margaritifera, but current status unknown” with respect to the presence of Freshwater Pearl Mussels this catchment historically had records of mussels but its status is

REPORT

Settlement	Zoning	Text within Settlement Statement regarding European sites.
	development here)	currently unknown. Therefore, any proposed development will need to take into consideration the potential effects on this species and its habitat.
	VGA4 (Entire parcel within SPA with no pre-existing development)	Commercial - Any plan or project within this zoning must consider any potential significant effects on the SPA and must undergo screening for appropriate assessment. VGA1 -These sites have been identified as being suitable for the provision of individual sites or for infill. Residential development shall be restricted to small clusters of dwelling houses. In line with the objective for Village Growth Areas, other uses appropriate to the function, scale, size and character of the village may also be accommodated on these lands. Any development of these sites will need to demonstrate compliance with the EPA Code of Practise for Wastewater Treatment Systems which must be strictly adhered to, in order to ensure that there are no significant long term effects on the Graney River.
Caher	MU1 (Entire parcel within SPA with no pre-existing development, recent scrub/tree clearance)	The entire settlement of Caher is located within the Shannon - Graney/Scarriff Margaritifera (Freshwater Pearl Mussel (FPM)) Sensitive Area. While the current status of the FPM in this catchment is unknown, there are previous records of the FPM in this catchment and therefore any proposed development will need to take into consideration the potential negative effects on this species and its habitat.

In considering “in combination” or “cumulative” impacts, it is again emphasised that the CCDP is a strategic spatial plan. The NPF and RSES which sit above the CCDP in the planning hierarchy are subject to the appropriate environmental assessments and legislation including AA. In-turn, the lower tier plans such as LAPs which are informed by the CCDP are also subject to the relevant environmental assessments including AA. These statutory provisions are underscored by the specific objectives in the CCDP (discussed above) which expressly state that they are subject to the relevant environmental assessment requirements including AA.

Furthermore, the CCDP offers support for a number of inter-related plans, strategies and programmes which have already undergone AA including development of the necessary mitigation to avoid adverse effects on the integrity of European sites. This mitigation is implicit in support for these other plans, programmes and strategies.

With the application of the environmental safeguards specified in the CCDP (in the form of CCDP policies and objectives), the mitigation measures specified in the NIR and mitigation stipulated within plans and programmes which the CCDP supports, it can be ascertained that the CCDP will not adversely affect the integrity of a European site (whether individually or in combination with other plans or projects).

REPORT

SAC Name	Site Code	Qualifying Interests
Loughatorick South Bog SAC	000308	Designated for the presence of the Blanket bog (active only) habitat, listed under Annex I of the EU Habitats Directive.
Ballyteige (Clare) SAC	000994	This site consists of Molina meadows on calcareous, peaty or clayey-silt laden soils (<i>Molinion caeruleae</i>), a habitat listed under Annex I of the EU Habitats Directive.
Ballyvaughan Turlough SAC	000996	Designated for the presence of Turloughs which are listed under Annex I of the EU Habitats Directive.
Glenomra Wood SAC	001013	This site consists of Old sessile oak woods with Ilex and Blechnum in British Isles, listed under Annex I of the EU Habitats Directive.
Carrowmore Point to Spanish Point and Islands SAC & pNHA	001021	Designated for the presence of the following habitats listed under Annex I of the EU Habitats Directive: Coastal lagoons, Reefs, Perennial vegetation of stony banks and Petrifying springs with tufa formation (Cratoneurion).
Termon Lough SAC	001321	Termon Lough SAC is situated approximately 6 km south-west of Gort, on the border between Counties Clare and Galway. It consists of a series of three turloughs, with low, drift-covered slopes on all sides except in the north-east, where a small area of limestone pavement is found. Designated for the presence of Turloughs, a habitat listed under Annex I of the EU Habitats Directive.
Glendree Bog SAC	001912	Designated for the presence of Blanket Bog (active only), a habitat listed under Annex I of the EU Habitats Directive.
East Burren Complex SAC	001926	This site has the following habitats which are listed under Annex I of the EU Habitats Directive: Hard oligo-mesotrophic waters with benthic vegetation of Chara spp., Turloughs, Alpine and Boreal Heaths, Juniperus communis formations on heaths or calcareous grasslands, Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco Brometalia</i>) (important orchid sites), lowland hay meadows (<i>Alopecurus pratensis</i> , <i>Sanguisorba officinalis</i>), Calcareous fens with <i>Cladium mariscus</i> and species of the <i>Caricon davallianae</i> , Petrifying springs with tufa formation (Cratoneurion), Alkaline fens, Limestone pavements, Caves not open to the public, Alluvial forests with <i>Alnus glutinosa</i> and <i>Fraxinus excelsior</i> (<i>Alno-Padion</i> , <i>Alnion incaeanae</i> , <i>Salicion albae</i>). The Otter (<i>Lutra lutra</i>) is found at this site and is listed under Annex II of the EU Habitats Directive.
Old Domestic Building (Keevagh) SAC	002010	Designated for the presence of the Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>) which is listed under Annex II of the EU Habitats Directive.
Newhall and Edenvale Complex SAC	002091	This site is significant as it consists of the habitat Caves not open to the public which is a habitat listed under Annex I of the EU Habitats Directive. The Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>), an Annex II species can also be found at this location.
Pollagoona Bog SAC	002126	Designated for the presence of Blanket bog (active only) which is a habitat listed under Annex I of the EU Habitats Directive.
Newgrove House SAC	002157	This site is significant as the Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>) which is listed under Annex II of the EU Habitats Directive can be found here.
Lower River Shannon SAC	002165	Designated for the presence of the following habitats under Annex I of the EU Habitats Directive: Sandbanks which are slightly covered by sea water all the time, Estuaries, Mudflats and sandflats not covered by seawater at low tide, Coastal lagoons, Large shallow inlets and bays, Reefs, Perennial vegetation of stony banks, Vegetated sea cliffs of the Atlantic and Baltic coasts, Salicornia and other annuals colonizing mud and sand, Spartina swards (<i>Spartinion maritimae</i>), Atlantic salt meadows (<i>Glauco-Puccinellietalia maritimae</i>), Mediterranean salt meadows (<i>Juncetalia maritimi</i>), Molina meadows on calcareous, peaty or clayey-silt laden soils (<i>Molinion caeruleae</i>) and Alluvial forests with <i>Alnus glutinosa</i> and <i>Fraxinus excelsior</i> (<i>Alno-Padion</i> , <i>Alnion incaeanae</i> , <i>Salicion albae</i>). Annex II species which are present at this site

REPORT

SAC Name	Site Code	Qualifying Interests
		include the Freshwater pearl mussel (<i>Margaritifera margaritifera</i>), Sea lamprey (<i>Petromyzon marinus</i>), Brook lamprey (<i>Lampetra planeri</i>), River lamprey (<i>Lampetra fluviatilis</i>), Salmon (<i>Salmo salar</i>), Bottle-nosed dolphin (<i>Tursiops truncatus</i>) and the Otter (<i>Lutra lutra</i>).
Old Farm Buildings, Ballymacrogan SAC	002245	This site is significant as the Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>) which is listed under Annex II of the EU Habitats Directive can be found here.
Ballycullinan, Old Domestic Building SAC	002246	Designated for the presence of the Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>) which is listed under Annex II of the EU Habitats Directive.
Toonagh Estate SAC	002247	This site is significant as the Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>) which is listed under Annex II of the EU Habitats Directive can be found here.
Carrowmore Dunes SAC	002250	Designated for the presence of the following habitats listed under Annex I of the EU Habitats Directive: Reefs, Embryonic shifting dunes, Shifting dunes along the shoreline with <i>Ammophila arenaria</i> (white dunes) and Fixed coastal dunes with herbaceous vegetation (grey dunes). The Annex II species narrow-mouthed whorl snail (<i>Vertigo angustior</i>) can also be located at this site.
Kilkee Reefs SAC	002264	This site is significant as it consists of a Reef habitat and a shallow bay habitat which is both listed under Annex I of the EU Habitats Directive.
Slieve Bernagh Bog SAC	002312	Designated for the presence of blanket bog, wet heath and dry heath which are habitats that are listed under Annex I of the EU Habitats Directive.
Old Domestic Buildings, Rylane SAC	002314	This site contains two important breeding roosts of the Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>) which is listed under Annex II of the Habitats Directive.
Ratty River Cave SAC	002316	Designated for the presence of a cave which is listed under Annex I of the EU Habitats Directive and it is a significant winter roost and a breeding site of the Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>) which is listed under Annex II of the EU Habitats Directive.
Cregg House Stables, Crusheen	002317	This site contains an important breeding roost of the Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>) which is listed under Annex II of the Habitats Directive. Situated approx. 1km from the Clare Border.
Knockanira House SAC	002318	This site is significant as it contains an important maternity roost of the Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>) which is listed under Annex II of the EU Habitats Directive.
Kilkishen House SAC	002319	Designated for the presence of an important winter roost of the Lesser horseshoe bat (<i>Rhinolophus hipposideros</i>) which is listed under Annex II of the Habitats Directive.
Tullaheer Lough and Bog SAC	002343	Significant site as it consists of an active raised bog, degraded raised bog and Rhynchosporion and transition mire which are listed on Annex I of the EU Habitats Directive.
Ardrahan Grassland SAC	002244	Designated for Alpine and Boreal heaths, Juniperus communis formations on heaths or calcareous grasslands Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites) and Limestone pavements which are listed on Annex I of the EU Habitats Directive.
Askeaton Fen Complex SAC	002279	Designated for Calcareous fens with <i>Cladium mariscus</i> and species of the <i>Caricion davallianae</i> and Alkaline fens which are listed on Annex I of the EU Habitats Directive.
Ballinduff Turlough SAC	002295	Designated for the presence of a turlough. The turlough is late-draining and a pool persists into June or July and re-floods easily. Turloughs are listed on Annex I of the EU Habitats Directive.
Barrigone SAC	000432	Designated for Juniperus communis formations on heaths or calcareous grasslands, Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites) , Limestone

REPORT

SAC Name	Site Code	Qualifying Interests
		pavements and <i>Euphydryas aurinia</i> (Marsh Fritillary) [1065]. These habitats are listed on Annex I of the EU Habitats Directive.
Barroughter Bog SAC	000231	Designated for Active raised bogs, degraded raised bogs still capable of natural regeneration and Depressions on peat substrates of the Rhynchosporion These habitats are listed on Annex I of the EU Habitats Directive.
Caherglassaun Turlough SAC	000238	Designated for the presence of a turlough. Turloughs are listed on Annex I of the EU Habitats Directive.
Cahermore Turlough SAC	002294	Designated for the presence of a turlough. Turloughs are listed on Annex I of the EU Habitats Directive.
Carrowbaun, Newhall and Ballylee Turloughs SAC	002293	Designated for the presence of a turlough. Turloughs are listed on Annex I of the EU Habitats Directive.
Castletaylor Complex SAC	000242	Designated for Turloughs, Alpine and Boreal heaths, Juniperus communis formations on heaths or calcareous grasslands, Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites) and Limestone pavements. These habitats are listed on Annex I of the EU Habitats Directive.
Clare Glen SAC	000930	Designated for Old sessile oak woods with Ilex and Blechnum in the British Isles and <i>Trichomanes speciosum</i> (Killarney Fern). This habitat is listed on Annex I of the EU Habitats Directive and Killarney Fern is listed in Annex II and IV of the Habitats Directive
Cloonmoylan Bog SAC	000248	Designated for Active raised bogs, Degraded raised bogs still capable of natural regeneration, Depressions on peat substrates of the Rhynchosporion and Bog woodland. These habitats are listed on Annex I of the EU Habitats Directive.
Connemara Bog Complex SAC	002034	Designated for Coastal lagoons, Reefs, Oligotrophic waters containing very few minerals of sandy plains (<i>Littorelletalia uniflorae</i>), Oligotrophic to mesotrophic standing waters with vegetation of the <i>Littorelletea uniflorae</i> and/or <i>Isoeto-Nanojuncetea</i> , Natural dystrophic lakes and ponds, Water courses of plain to montane levels with the <i>Ranunculion fluitantis</i> and <i>Callitricho-Batrachion</i> vegetation, Northern Atlantic wet heaths with <i>Erica tetralix</i> , European dry heaths, Molinia meadows on calcareous, peaty or clayey-silt-laden soils (<i>Molinion caeruleae</i>), Blanket bogs (* if active bog), Transition mires and quaking bogs, Depressions on peat substrates of the Rhynchosporion, Alkaline fens, Old sessile oak woods with Ilex and Blechnum in the British Isles, <i>Euphydryas aurinia</i> (Marsh Fritillary), <i>Salmo salar</i> (Salmon), <i>Lutra lutra</i> (Otter) and <i>Najas flexilis</i> (Slender Naiad). These habitats are listed on Annex I of the EU Habitats Directive. Slender Naiad, Otter and Salmon are listed in Annex II and IV of the Habitats Directive. Marsh Fritillary is listed in Annex II of the Habitats Directive
Coole-Garryland Complex SAC	000252	Designated for Natural eutrophic lakes with Magnopotamion or Hydrocharition - type vegetation, Turloughs, Rivers with muddy banks with <i>Chenopodium rubri</i> p.p. and <i>Bidention</i> p.p. vegetation, Juniperus communis formations on heaths or calcareous grasslands, Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites), Limestone pavements and <i>Taxus baccata</i> woods of the British Isles. These habitats are listed on Annex I of the EU Habitats Directive.
Curraghchase Woods SAC	000174	Designated for Alluvial forests with <i>Alnus glutinosa</i> and Fraxinus excelsior (<i>Alno-Padion</i> , <i>Alnion incanae</i> , <i>Salicion albae</i>), <i>Taxus baccata</i> woods of the British Isles, <i>Vertigo moulinsiana</i> (Desmoulin's Whorl Snail) and <i>Rhinolophus hipposideros</i> (Lesser horseshoe bat). These habitats are listed on Annex I of the EU Habitats Directive. Desmoulin's Whorl Snail is listed in Annex II of the Habitats Directive and Lesser horseshoe bat are listed in Annex II and IV of the Habitats Directive.

REPORT

SAC Name	Site Code	Qualifying Interests
Derrycrag Wood Nature Reserve SAC	000261	Designated for Old sessile oak woods with Ilex and Blechnum in the British Isles. This habitat is listed on Annex I of the EU Habitats Directive.
Drummin Wood SAC	002181	Designated for Old sessile oak woods with Ilex and Blechnum in the British Isles. This habitat is listed on Annex I of the EU Habitats Directive.
Glenstal Wood SAC	001432	Designated for <i>Trichomanes speciosum</i> (Killarney Fern). This habitat is listed on Annex I of the EU Habitats Directive.
Gortacarnaun Wood SAC	002180	Designated for Old sessile oak woods with Ilex and Blechnum in the British Isles. This habitat is listed on Annex I of the EU Habitats Directive.
Inisheer Island SAC	001275	Designated for Coastal lagoons, Reefs, European dry heaths, Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites), Lowland hay meadows (<i>Alopecurus pratensis</i> , <i>Sanguisorba officinalis</i>) and Limestone pavements. This habitat is listed on Annex I of the EU Habitats Directive.
Inishmaan Island SAC	000212	Designated for Reefs, Perennial vegetation of stony banks, Vegetated sea cliffs of the Atlantic and Baltic coasts, Embryonic shifting dunes, Shifting dunes along the shoreline with <i>Ammophila arenaria</i> (white dunes), Machairs (* in Ireland), European dry heaths, Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites), Lowland hay meadows (<i>Alopecurus pratensis</i> , <i>Sanguisorba officinalis</i>) and Limestone pavements. These habitats are listed on Annex I of the EU Habitats Directive.
Inishmore Island SAC	000213	Designated for Coastal lagoons, Reefs, Perennial vegetation of stony banks, Vegetated sea cliffs of the Atlantic and Baltic coasts, Embryonic shifting dunes, Shifting dunes along the shoreline with <i>Ammophila arenaria</i> (white dunes), Fixed coastal dunes with herbaceous vegetation (grey dunes), Dunes with <i>Salix repens</i> ssp. <i>argentea</i> (<i>Salicion arenariae</i>), Humid dune slacks, Machairs, European dry heaths, Alpine and Boreal heaths, Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites), Lowland hay meadows (<i>Alopecurus pratensis</i> , <i>Sanguisorba officinalis</i>), Limestone pavements, Submerged or partially submerged sea caves and <i>Vertigo angustior</i> (Narrow-mouthed Whorl Snail). These habitats are listed on Annex I of the EU Habitats Directive. Narrow-mouthed Whorl Snail is listed in Annex II of the Habitats Directive
Keeper Hill SAC	001197	Designated for Northern Atlantic wet heaths with <i>Erica tetralix</i> and Blanket bogs (*if active bog). These habitats are listed on Annex I of the EU Habitats Directive.
Kerry Head Shoal SAC	002263	Designated for Reefs. This habitat is listed on Annex I of the EU Habitats Directive.
Kiltartan Cave (Coole) SAC	000286	Designated for Caves do not open to the public and <i>Rhinolophus hipposideros</i> (Lesser horseshoe bat). This habitat is listed on Annex I of the EU Habitats Directive. Lesser horseshoe bat is listed in Annex II and Annex IV of the Habitats Directive.
Kiltiernan Turlough SAC	001285	Designated for the presence of a turlough. Turloughs are listed on Annex I of the EU Habitats Directive.
Lough Corrib SAC	000297	Designated for Oligotrophic waters containing very few minerals of sandy plains (<i>Littorelletalia uniflorae</i>), Oligotrophic to mesotrophic standing waters with vegetation of the <i>Littorelletea uniflorae</i> and/or <i>Isoeto-Nanojuncetetea</i> , Hard oligo-mesotrophic waters with benthic vegetation of Chara spp., Water courses of plain to montane levels with the <i>Ranunculion fluitantis</i> and <i>Callitriche-Batrachion</i> vegetation, Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites), Molinia meadows on calcareous, peaty or clayey-silt-laden soils (<i>Molinion caeruleae</i>), Active raised bogs, Degraded raised bogs still capable of natural regeneration, Depressions on peat substrates of the Rhynchosporion, Calcareous fens with <i>Cladium mariscus</i> and species of the

Lough Coy SAC	002117	Designated for the presence of a turlough. Turloughs are listed on Annex I of the EU Habitats Directive.
Lough Cutra SAC	000299	Designated for <i>Rhinolophus hipposideros</i> (Lesser horseshoe bat). Lesser horseshoe bat is listed in Annex II and Annex IV of the Habitats Directive
Lough Derg, North-east Shore SAC	002241	Designated for <i>Juniperus communis</i> formations on heaths or calcareous grasslands, Calcareous fens with <i>Cladium mariscus</i> and species of the <i>Caricion davallianae</i> , Alkaline fens, Limestone pavements, Alluvial forests with <i>Alnus glutinosa</i> and <i>Fraxinus excelsior</i> (<i>Alno-Padion</i> , <i>Alnion incanae</i> , <i>Salicion albae</i>) and <i>Taxus baccata</i> woods of the British Isles. These habitats are listed on Annex I of the EU Habitats Directive.
Lough Fingall Complex SAC	000606	Designated for Turloughs, Alpine and Boreal heaths, <i>Juniperus communis</i> formations on heaths or calcareous grasslands, Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites), Calcareous fens with <i>Cladium mariscus</i> and species of the <i>Caricion davallianae</i> , Limestone pavements and <i>Rhinolophus hipposideros</i> (Lesser horseshoe bat). These habitats are listed on Annex I of the EU Habitats Directive. Lesser horseshoe bat is listed in Annex II and Annex IV of the Habitats Directive
Moanveanlagh Bog SAC	002351	Designated for Active raised bogs, Degraded raised bogs still capable of natural regeneration and Depressions on peat substrates of the Rhynchosporion. These habitats are listed on Annex I of the EU Habitats Directive
Peterswell Turlough SAC	000318	Designated for the presence of a turlough and Rivers with muddy banks with <i>Chenopodium rubri</i> p.p. and <i>Bidention</i> p.p. vegetation. These habitats are listed in Annex I of the EU Habitats Directive.
Pollnacknockaun Wood Nature Reserve SAC	000319	Designated for Old sessile oak woods with Ilex and Blechnum in the British Isles. This habitat is listed on Annex I of the EU Habitats Directive.
River Shannon Callows SAC	000216	Designated for <i>Molinia</i> meadows on calcareous, peaty or clayey-silt-laden soils (<i>Molinion caeruleae</i>) , Lowland hay meadows (<i>Alopecurus pratensis</i> , <i>Sanguisorba officinalis</i>), Alkaline fens, Limestone pavements, Alluvial forests with <i>Alnus glutinosa</i> and <i>Fraxinus excelsior</i> (<i>Alno-Padion</i> , <i>Alnion incanae</i> , <i>Salicion albae</i>) and <i>Lutra lutra</i> (Otter). These habitats are listed on Annex I of the EU Habitats Directive. Otter is listed in Annex II and Annex IV of the Habitats Directive.
Rosturra Wood SAC	001313	Designated for Old sessile oak woods with Ilex and Blechnum in the British Isles. This habitat is listed on Annex I of the EU Habitats Directive.
Schoaboy (Sopwell) Bog SAC	002206	Designated for Degraded raised bogs still capable of natural regeneration. This habitat is listed on Annex I of the EU Habitats Directive.
Silvermine Mountains SAC	000939	Designated for Northern Atlantic wet heaths with <i>Erica tetralix</i> and

REPORT

		Species-rich <i>Nardus</i> grasslands, on siliceous substrates in mountain areas (and submountain areas, in Continental Europe). These habitats are listed on Annex I of the EU Habitats Directive.
Silvermines Mountains West SAC	002258	Designated for Northern Atlantic wet heaths with <i>Erica tetralix</i> , European dry heaths and Calaminarian grasslands of the <i>Violetalia calaminariae</i> . These habitats are listed on Annex I of the EU Habitats Directive.
Sonnagh Bog SAC	001913	Designated for Blanket bogs (* if active bog). This habitat is listed on Annex I of the EU Habitats Directive.
Tory Hill SAC	000439	Designated for Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites), Calcareous fens with <i>Cladium mariscus</i> and species of the <i>Caricion davalliana</i> and Alkaline fens. These habitats are listed on Annex I of the EU Habitats Directive.

REPORT

Table A-2: Special Protected Areas within the ZOI of the Draft CDP

Designated SPA	Site Code	Reason for Designation
Cliffs of Moher SPA	004005	This site is significant for the presence of the Breeding Peregrine (<i>Falco peregrinus</i>) and the Chough (<i>Pyrrhocorax pyrrhocorax</i>) which are listed under Annex I of the EU Birds Directive. It is also designated for the presence of Fulmar (<i>Fulmarus glacialis</i>), Kittiwake (<i>Rissa tridactyla</i>), Guillemot (<i>Uria aalge</i>), Razorbill (<i>Alca torda</i>), and Puffin (<i>Fratercula arctica</i>). This site has the largest Kittiwake (<i>Rissa tridactyla</i>) and Razorbill (<i>Alca torda</i>) colonies in Ireland.
Inner Galway Bay SPA & Ramsar Site	004031	Designated for the presence of the following species which are listed under Annex I of the EU Birds Directive: Red-throated Diver (<i>Gavia stellata</i>), Black-throated Diver (<i>Gavia artica</i>), Great Northern Diver (<i>Gavia immer</i>), Golden Plover (<i>Pluvialis apricaria</i>), Bar-tailed Godwit (<i>Limosa limosa</i>), Sandwich Tern (<i>Sterna sandvicensis</i>) and Common Tern (<i>Sterna hirundo</i>). Also found at this site are the Cormorant (<i>Phalacrocorax carbo</i>), Grey Heron (<i>Ardea cinerea</i>), Light-Bellied Brent Goose (<i>Branta bernicla hrota</i>), Wigeon (<i>Anas Penelope</i>), Teal (<i>Anas crecca</i>), Shoveler (<i>Anas clypeata</i>), Red-Breasted Merganser (<i>Mergus serrator</i>), Ringed Plover (<i>Charadrius hiaticula</i>), Golden Plover (<i>Pluvialis apricaria</i>), Northern Lapwing (<i>Vanellus vanellus</i>), Dunlin (<i>Calidris alpina</i>), Curlew (<i>Numenius arquata</i>), Redshank (<i>Tringa tetanus</i>), Turnstone (<i>Arenaria interpres</i>), Black-headed Gull (<i>Chroicocephalus ridibundus</i>) and the Common Gull (<i>Larus canus</i>).
Ballyallia Lake Wildfowl Sanctuary SPA	004041	This site is significant as the Whooper Swan (<i>Cygnus cygnus</i>), a species listed under Annex I of the EU Birds Directive can be located here. In addition, the Shoveler (<i>Anas</i>) population is the largest in Ireland and the Gadwall (<i>Anas strepera</i>) population is also highly significant.
Lough Derg (Shannon) SPA	004058	Designated for the presence of the Common Tern (<i>Sterna hirundo</i>), Whooper Swan (<i>Cygnus cygnus</i>) and the Greenland White-fronted Goose (<i>Anser albifrons flavirostris</i>) which are listed under Annex I of the EU Birds Directive. The site also has nationally breeding populations of Cormorant (<i>Phalacrocorax carbo</i>) and specifically during winter there are significant populations of Tufted Duck (<i>Aythya fuligula</i>) and Goldeneye (<i>Bucephala clangula</i>).
River Shannon and River Fergus Estuaries SPA	004077	The following species listed under Annex I of the EU Birds Directive can be found at this site: Whooper Swan (<i>Cygnus cygnus</i>), Golden Plover (<i>Pluvialis apricaria</i>) and the Bar-tailed Godwit (<i>Limosa lapponica</i>). In addition, it has internationally important populations of Dunlin (<i>Calidris alpina</i>), Black-tailed Godwit (<i>Limosa limosa</i>) and Redshank (<i>Tringa totanus</i>). In addition, the following species can also be found at this location: Cormorant (<i>Phalacrocorax carbo</i>), Light-bellied Brent Goose (<i>Branta bernicla hrota</i>), Shelduck (<i>Tadorna tadorna</i>), Wigeon (<i>Anas Penelope</i>), Teal (<i>Anas crecca</i>), Pintail (<i>Anas acuta</i>), Shoveler (<i>Anas clypeata</i>), Scaup (<i>Aythya marila</i>), Ringed Plover (<i>Charadrius hiaticula</i>), Grey Plover (<i>Pluvialis squatarola</i>), Northern Lapwing (<i>Vanellus vanellus</i>), Knot (<i>Calidris canutus</i>), Curlew (<i>Numenius arquata</i>), Greenshank (<i>Tringa nebularia</i>) and the Black-headed Gull (<i>Chroicocephalus ridibundus</i>).
Illauonearaun SPA	004114	Designated for the presence of the Barnacle Goose (<i>Branta leucopsis</i>), a species listed under Annex I of the EU Birds Directive. The population of Barnacle Geese at this site often exceeds the qualifying threshold for National Importance.
Loop Head SPA	004119	This site is significant for the presence of breeding Chough (<i>Pyrrhocorax pyrrhocorax</i>) and Peregrine (<i>Falco peregrinus</i>), species listed under Annex I of the EU Birds Directive. The site also has

REPORT

Designated SPA	Site Code	Reason for Designation
		populations of Kittiwake (<i>Rissa tridactyla</i>) and Guillemot (<i>Uria aalge</i>) which are of National Importance.
Slieve Aughty Mountains SPA	004168	Designated for the presence of the Hen Harrier (<i>Circus cyaneus</i>), a species listed under Annex I of the EU Birds Directive. This is the second largest concentration for this species in Ireland. Another Annex I species, Merlin (<i>Falco columbarius</i>) can be found at this site.
Mid-Clare Coast SPA	004182	Significant species at this site include the Barnacle Goose (<i>Branta leucopsis</i>), Storm Petrel (<i>Hydrobates pelagicus</i>), Golden Plover (<i>Pluvialis apricaria</i>), Great Northern Diver (<i>Gavia immer</i>), and Red-throated Diver (<i>Gavia stellata</i>) which are listed under Annex I of the EU Birds Directive. It has a nationally important breeding colony of Cormorant (<i>Phalacrocorax carbo</i>) during the summer. It is also an important site for the presence of Ringed Plover (<i>Charadrius hiaticula</i>), Sanderling,
Corofin Wetlands SPA	004220	Designated for the presence of the Whooper Swan (<i>Cygnus cygnus</i>) and the Golden Plover (<i>Pluvialis apricaria</i>) were listed under Annex I of the EU Birds Directive. In addition, the site supports nationally important populations of Little Grebe (<i>Tachybaptus ruficollis</i>), Wigeon (<i>Anas Penelope</i>), Teal (<i>Anas crecca</i>) and the Black-tailed Godwit (<i>Limosa limosa</i>).
Connemara Bog Complex SPA	004181	Designated for the presence of SCI birds Cormorant (<i>Phalacrocorax carbo</i>), Merlin (<i>Falco columbarius</i>), Golden Plover (<i>Pluvialis apricaria</i>) and Common Gull (<i>Larus canus</i>).
Coole-Garryland SPA	004107	Designated for the presence of SCI birds Whooper Swan (<i>Cygnus cygnus</i>). The site is of international importance for Whooper Swan (214), which utilise it for both feeding and roosting purposes
Cregganna Marsh SPA	004142	Designated for the presence of SCI birds Greenland White-fronted Goose (<i>Anser albifrons flavirostris</i>). The site is of major conservation importance as a feeding site for a nationally important flock of Greenland White-fronted Goose (157 – 5 year mean peak between 1994/95 and 1998/99. The birds using this site form part of the Rahasane flock.
Inishmore SPA		Designated for the presence of SCI birds Kittiwake (<i>Rissa tridactyla</i>), Arctic Tern (<i>Sterna paradisaea</i>), Little Tern (<i>Sterna albifrons</i>) and Guillemot (<i>Uria aalge</i>).
Kerry Head SPA	004189	Designated for the presence of SCI birds Fulmar (<i>Fulmarus glacialis</i>) and Chough (<i>Pyrrhocorax pyrrhocorax</i>). The site supports an internationally important population of breeding Chough, a Red Data Book species that is listed on Annex I of the E.U. Birds Directive; 32 breeding pairs were recorded from the site in the 1992 survey and 30 in the 2002/03 survey. In addition, a flock of 20 birds was noted on the northern coast of the site during the latter survey. The site is of particular note for the density of breeding pairs found. The site also supports a nationally important population of Fulmar (421 pairs).
Lough Corrib SPA	004042	Designated for the presence of SCI birds Gadwall (<i>Anas strepera</i>), Shoveler (<i>Anas clypeata</i>), Pochard (<i>Aythya ferina</i>), Tufted Duck (<i>Aythya fuligula</i>), Common Scoter (<i>Melanitta nigra</i>), Hen Harrier (<i>Circus cyaneus</i>), Coot (<i>Fulica atra</i>), Golden Plover (<i>Pluvialis apricaria</i>), Black-headed Gull (<i>Chroicocephalus ridibundus</i>), Common Gull (<i>Larus canus</i>), Common Tern (<i>Sterna hirundo</i>), Arctic Tern (<i>Sterna paradisaea</i>) and Greenland White-fronted Goose (<i>Anser albifrons flavirostris</i>).
Lough Cutra SPA	004056	Designated for the presence of SCI birds Cormorant (<i>Phalacrocorax carbo</i>). Lough Cutra is a long-established breeding site for Cormorant

REPORT

Designated SPA	Site Code	Reason for Designation
		(166 pairs in 1985) although numbers have declined in recent years (34 pairs in 1996). The birds breed on Parsons Island and appear to commute to the coast for feeding.
Middle Shannon Callows SPA	004096	Designated for the presence of SCI birds Whooper Swan (<i>Cygnus cygnus</i>), Wigeon (<i>Anas Penelope</i>), Corncrake (<i>Crex crex</i>), Golden Plover (<i>Pluvialis apricaria</i>), Lapwing (<i>Vanellus vanellus</i>), Black-tailed Godwit (<i>Limosa limosa</i>) and Black-headed Gull (<i>Chroicocephalus ridibundus</i>).
Slievefelim to Silvermines Mountains SPA	004165	Designated for the presence of SCI bird Hen Harrier (<i>Circus cyaneus</i>).
Stack's to Mullaghareirk Mountains, West Limerick Hills and Mount Eagle SPA	004161	Designated for the presence of SCI bird Hen Harrier (<i>Circus cyaneus</i>).

Appendix B

Volume 1 Assessment Results – Draft Written Statement Objectives

REPORT

Table B - 1: Assessment of Objectives within Volume 1 -Written Statement

	Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
Climate	CDP2.1 Climate Action	It is an objective of the Development Plan: a) To support the implementation of the National Climate Action Plan 2021 and the National Climate Change Adaptation Framework (and any subsequent versions thereof), and to work with the Regional Climate Action Offices to enable County Clare to transition to a low carbon and climate resilient County; b) To adopt sustainable planning strategies through integrating land use and transportation and by facilitating mixed use developments as a means of supporting national targets for climate policy mitigation and adaptation objectives, and reducing our carbon footprint and greenhouse emissions; and c) To raise awareness and understanding of the impacts of climate change on both the local economy and communities in the County, and the ways communities can increase response and resilience to these impacts.	No Likely to provide positive impacts in terms of reduced greenhouse gas/carbon emissions and promotion of awareness and resilience to climate change.	
Climate	CDP2.2 Climate Change Mitigation, Adaptation and Resilience	It is an objective of the Development Plan: a) To support the implementation of the Clare Climate Change Adaptation Strategy 2019-2024 (and any subsequent versions); b) To promote measures that build resilience to climate change to address impact reduction, adaptive capacity, awareness raising, providing for nature-based solutions and emergency planning; c) To raise awareness of issues relating to climate change and climate change adaptation during the lifetime of this Plan; d) To liaise, collaborate and work in partnership with the relevant Government approved sectors in relation to initiatives and activities across the County;	No Likely to provide positive impacts in terms of reduced greenhouse gas/carbon emissions and promotion of awareness and resilience to climate change.	

REPORT

	Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
		<p>e) To support the Ennis 2040 Spatial and Economic Strategy and its aspiration for Ennis to become Irelands first climate adaptive town; and</p> <p>f) To facilitate and support the relevant stakeholders and enterprises in the progression of advancements in climate adaptation solutions and renewable energy generation and technologies.</p>		
Climate	CDP2.3 Severe Weather Emergency Response Plans	<p>It is an objective of Clare County Council: To support the implementation of the Flood Emergency Plan for the County with specific flood response plans for identified areas and a Business Continuity Plan to identify and address impacts associated with extreme weather events on all functions/services of the Local Authority.</p>	<p>No Objective is to support the Clare County Council Flood Emergency Plan which is used in the response to a flood emergency in the county. This includes flooding or imminent threat of flooding</p> <p>Any development associated is related to other objective and assessed under these.</p>	
Climate	CDP2.4 Smart Growth Initiatives	<p>It is an objective of Clare County Council: To support smart growth initiatives that develop new solutions to existing and future urban challenges, including climate risks in the County and to seek climate and smart technology funding in this regard.</p>	<p>No Likely to provide positive impacts in terms of reduced greenhouse gas/carbon emissions and promotion of green industry and technology</p>	
Climate	CDP2.5 Decarbonis ation Zone	<p>It is an objective of Clare County Council: a) To support and facilitate the sustainable development of a decarbonisation zone in County Clare in accordance with the Climate Action Plan 2021; and b) To prepare an implementation plan for the decarbonisation zone.</p>	<p>No Likely to provide positive impacts in terms of reduced greenhouse gas/carbon emissions.</p>	
Climate	CDP2.6 Flood Risk Assessment & Manageme nt	<p>It is an objective of the Development Plan: a) To ensure development proposals have regard to the requirements of the SFRA and Flood Risk Management Guidelines; and where required are supported by an appropriately detailed hydrological assessment / flood risk assessment.</p>	<p>No Under the "Planning System and Flood Risk Management" guidelines, the purpose for the SFRA is detailed as being <i>"to provide a broad (wide area) assessment of all types of flood risk to inform strategic land-use planning decisions.</i></p>	

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
	<p>b) To ensure that flood risk assessments include consideration of potential impacts of flood risk arising from climate change including sea level rise and coastal erosion;</p> <p>c) To integrate sustainable water management solutions, prioritising nature-based solutions (such as SUDS, nonporous surfacing and green roofs) into development proposals;</p> <p>d) To include Natural Water Retention Measures (NWRMS) where appropriate in consultation with the Office of Public Works (OPW) and other relevant stakeholders;</p> <p>e) To support investment in the sustainable development of capital works under the flood capital investment programme and Flood Risk Management Plans developed under the Catchment Flood Risk Assessment and Management (CFRAM) process; and</p> <p>f) To ensure that potential future flood information obtained/generated through the Development Management process is used to inform suitable adaptation requirements in line with the Guidelines for Planning Authorities on Flood Risk Management (DoECLG & OPW, 2009).</p>	<p><i>SFRAs enable the LA to undertake the sequential approach, including the Justification Test, allocate appropriate sites for development and identify how flood risk can be reduced as part of the development plan process".</i> Flood risk management should be integrated into spatial planning policies at all levels to enhance certainty and clarity in the overall planning process and avoid inappropriate development in areas at risk of flooding.</p> <p>This objective facilitates that flood risk is integrated into the development process.</p> <p>Broad objective. No specific flood development project is detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>Objective c) is positive in supporting nature-based drainage solutions for development proposals</p> <p>While objective d) is positive in supporting natural water retention measures above hard engineering it must be ensured that any natural flood retention measures work to support habitats and species of any connected European sites.</p> <p>Objective CDP15.15e supports the use of natural approaches to flood management and control on</p>	

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
		lands owned or managed by or on behalf of Clare County Council subject to the appropriate ecological assessments.	
		Objective CDP3.1 is an overarching objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive and this includes adherence to the Strategic Flood Risk Assessment Report contained in Volume 10 of this Development Plan.	
		Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CDP and SFRA report and mitigation measures within the CFRAMS Appropriate Assessment.	
Climate	CDP2.7 Coastal Erosion & Flooding	It is an objective of Clare County Council to: <ul style="list-style-type: none"> a) To support measures (including Integrated Coastal Zone Management (ICZM)) for the management and protection of coastal resources and communities against sea level rise, coastal erosion, flooding and other threats and the implementation of adaptation responses in vulnerable areas; and b) To monitor the impact of Climate Change on the potential shock flows of surface water on to Clare's beaches during severe weather events, and how increased surface water flows will impact on bathing water quality and erosion of the beach infrastructure. 	<p>No</p> <p>Any erosion or flooding relief development along coastal areas has potential to result in adverse effects upon the integrity of European sites. In particular Annex dune habitats and species, they support. Development can impact the formation, fragment or lead to erosion of these habitats.</p> <p>Broad objective with no specific coastal flood development project is detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage</p>

REPORT

		<p>to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.</p> <p>A number of objectives within the CDP ensure the protection of European sites and supporting habitats from coastal flood development.</p> <p>Objective 13.11 ensures regard to any future adopted Integrated Coastal Zone Management Plan for the coastal and estuarine areas of the County, undertaken in accordance with the <i>Habitats and SEA Directive</i> as well as full compliance with the requirements of the <i>Habitats Directive</i>, <i>Water Framework Directive</i> and overarching environmental Objective CDP3.1 of this plan with regard to development in the coastal area.</p> <p>Objective CDP3.1 is an overarching objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive and this includes adherence to the Strategic Flood Risk Assessment Report contained in Volume 10 of this Development Plan.</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CDP and SFRA report and</p>	

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
		mitigation measures within the CFRAMS Appropriate Assessment.	
Climate CDP2.8 Floods Directive & CFRAMS	It is an objective of Clare County Council: a) To support the implementation of the EU Floods Directive 2007/60/EC to manage flood risks; and b) To implement the recommendations of the Catchment Flood Risk Assessment and Management Study (CFRAMS) programme as it relates to County Clare and to ensure that flood risk management policies and infrastructure are progressively implemented.	No Supporting objective for the implementation of the EU Flood Directive and CFRAMS which are subject to Appropriate Assessment. Any proposed flood defence protect shall be subject to the Appropriate Assessment and planning process as required. Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CDP and SFRA report and mitigation measures within the CFRAMS Appropriate Assessment	
Climate CDP2.9 Effective Collaboratio n to Implement River Basin Framework Directive	It is an objective of Clare County Council: a) To ensure a cross-agency collaborative approach to implementing the River Basin Management Plan; b) To ensure effective co-ordination between the requirements of the Flood Directive and the Water River Basin Framework Directive; c) To promote a catchment-based approach to water management to facilitate cross boundary collaboration and shared responsibility; d) To support bottom-up community initiatives through the integrated catchment management approach; e) To support the work of the Local Authority Waters Programme in promoting an integrated approach to catchment management; and	No Positive objective supporting the implementation of the River Basin Management Plan and WFD whose aim is to achieve at least good WFD status within rivers, lakes, groundwaters, estuaries and coastal waters.	
Climate CDP2.10	It is an objective of Clare County Council:	No	

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
Flood Relief Schemes	<p>a) Support investment in subsequent projects by capital spending agencies to deliver flood relief schemes under the National Strategic Outcome, Transition to a Low Carbon and Climate Resilient Society. Such projects should be future proofed for adaptation to consider potential impacts of climate change; and</p> <p>b) Ensure that all Infrastructure and energy providers/operators provide for adaptation measures to protect strategic infrastructure (including roads, railways, ports and energy infrastructure) from increased flood risk associated with climate change.</p>	<p>Any flood relief scheme has the potential to result in adverse effects upon the integrity of European sites in the absence of appropriate environmental assessments.</p> <p>CDP2.10 has positive aspects in ensuring that development considers increased flood risk from climate change. This will help to reduce the need for reactive flood defences if the development is designed and adapted for future climate projections now.</p> <p>Broad objective. No specific flood development project is detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data.</p> <p>Any flood scheme development shall be subject to Appropriate Assessment and planning process as required.</p> <p>The necessity for any flood relief scheme is first identified within CFRAM programme which conducts preliminary flood risk assessments, hazard mapping and flood risk management plan. CFRAM reports are subject to Appropriate Assessment.</p> <p>Objective CDP3.1 is an overarching objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive and</p>	

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
		<p>this includes adherence to the Strategic Flood Risk Assessment Report contained in Volume 10 of this Development Plan.</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CDP and SFRA report and mitigation measures within the CFRAMS Appropriate Assessment.</p>	
Climate	<p>CDP2.11 Storm Water Management</p> <p>It is an objective of Clare County Council:</p> <p>a) To ensure that adequate storm water infrastructure is in place to accommodate the planned level of growth in the Plan area;</p> <p>b) To require all new developments to provide a separate foul and surface water drainage system;</p> <p>c) To ensure the implementation of Sustainable Drainage Systems (SuDS) and in particular, to ensure that all storm water generated in a new development is disposed of on-site or is attenuated and treated prior to discharge to an approved storm water system; and</p> <p>d) To request the submission of details regarding Surface Water Attenuation Systems that take account of the potential future impact of climate change for multi-unit development applications in the Plan area. Development will only be permitted in areas where sufficient surface water capacity exists.</p>	<p>No</p> <p>Broadly positive ensuring there is suitable capacity for storm water infrastructure, SuDs systems are installed and that future climate changes are factored into surface water attenuation systems. This will help to ensure discharges are adequately treated prior to discharge and water quality is protected.</p>	
Climate	<p>CDP2.12 Flood Risk Management, Green Infrastructure</p> <p>It is an objective of Clare County Council:</p> <p>a) To facilitate and implement green infrastructure developments as a means of managing flood risk and enhancing the natural environment in the Plan area in compliance with Objective CDP 3.1; and</p>	<p>No</p> <p>Broadly positive utilising green infrastructure to manage flood risk and enhance the natural environment. It is acknowledged that opportunities to enhance biodiversity in flood risk</p>	

REPORT

e & Biodiversity	b) To avail of opportunities to enhance biodiversity and amenity and to ensure the protection of environmentally sensitive sites and habitats where flood risk management measures are planned subject to the requirements of the Habitats Directive.	management plans and the requirements of the habitats Directive are followed. Objective CDP3.1 is an overarching objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. Additional objectives (CDP 15.3, 15.4 15.9 - 15.22, 15.29 & 15.30) bolster the level of protection for European sites to ensure the effects of the development of any green infrastructure upon European sites is addressed.	
Climate CDP2.13	It is an objective of Clare County Council: Maintenance of Rivers To encourage and facilitate the maintenance of rivers and waterways by statutory authorities and the cleaning of drains in urban areas where appropriate, subject to the requirements of Objective CDP3.1, the OPW Best Practice Guidelines and the Wildlife Act.	No Dredging and channel maintenance activities may have the potential to have adverse effects upon European sites via disturbance of aquatic habitats supporting QI species (salmon, lamprey, white clawed crayfish), disturbance to otter and their resting/holt locations or direct mortality of QI species such as lamprey within sediment spoils. It is acknowledged within the objective that this should be subject to the requirements of CDP3.1 which is an overarching objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. In addition, all activities should be carried out in accordance with the Wildlife Act and OPW best practice guidance.	

REPORT

	Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
			Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CDP.	
Climate	CDP2.14	<p>It is an objective of Clare County Council: Transition to a Low Carbon Economy & Society</p> <p>a) To facilitate measures which will accelerate the transition to a low carbon economy and a circular economy through mechanisms such as the Climate Action Competitive Fund;</p> <p>b) To support the development of enterprises that create and employ green technologies and to promote County Clare as a Low Carbon County as a means of attracting inward investment to the County and to the wider Southern Region;</p> <p>c) To support the Ennis 2040 Strategic Objective to establish Ennis as Ireland's first climate adaptive town;</p> <p>d) To support and facilitate the implementation of the Clare Climate Change Adaptation Strategy 2019-2024;</p> <p>e) To ensure that the development of green industry and technologies incorporates careful consideration of potential environmental impacts at project level including the capacity of the receiving environment and existing infrastructure to serve these new industries.</p> <p>f) To facilitate the development of energy sources which will achieve low carbon output.</p> <p>g) To support sustainable modes of transport such as walking and cycling through promotional strategies and the provision of active travel infrastructure where required;</p>	<p>No</p> <p>The outcome of the objective is likely to provide positive impacts in terms of reduced greenhouse gas/carbon emissions and promotion of green industry and technology.</p> <p>It is acknowledged within the objective that development of green industry and technologies considers potential environmental impacts including the capacity of the receiving environment.</p> <p>Objective CDP3.1 is an overarching objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive.</p>	

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
	<p>h) To work to implement the provisions of Ireland's Transition to a Low Carbon Energy Future 2015-2030 as they relate to County Clare;</p> <p>i) To require the submission of an Energy Efficiency and Climate Change Adaptation Design Statements for large scale commercial and residential applications;</p> <p>j) To promote climate change issues across business, public and residential sectors and to target measures and support initiatives to achieve reduced greenhouse gas emissions in accordance with current and future national targets, improve energy efficiency and increase the use of renewable energy sources across the key sectors of electricity supply, heating, transport and agriculture;</p> <p>k) To support investments in the energy efficiency of existing commercial and public building stock with a target of all public buildings and at least one-third of total commercial premises upgraded to BER Rating 'B'; and</p> <p>l) To report annually on energy usage in all public buildings and to achieve a target of 33% improvement in energy efficiency in all buildings in accordance with the National Energy Efficiency Action Plan (NEEAP).</p>		
Climate	<p>CDP2.15 It is an objective of Clare County Council:</p> <p>Renewable a) To seek initiatives that will achieve the decarbonisation of the transport sector, moving to the use of clean generated electricity bio-gas hydrogen and other non-fossil fuels for private and public transportation and the provision of clean energy and low carbon fuelling stations by 2030;</p> <p>Transport b) To reduce reliance on private cars and achieve modal shift to sustainable transportation in conjunction with policies to achieve compact growth and reduce congestion;</p>	No	Broadly positive in supporting transition to low carbon transportation alternatives.

REPORT

	Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
		<p>c) To seek the development of clean energy and lower carbon fuelling and electric vehicle charging stations and infrastructure at the appropriate locations in the County which take into consideration electric, hydrogen, CNG/biogas inter-alia; and</p> <p>d) To support actions to transition the movement of freight, ports and airports to a low carbon future.</p>		
Climate	CDP2.16 Community Energy	<p>It is an objective of the Development Plan:</p> <p>a) To support and encourage the development of community owned energy initiatives developments at appropriate locations across the County;</p> <p>b) To support communities seeking designation as 'Sustainable Energy Communities'; and</p> <p>c) To explore the potential of designating Shannon Town Centre as a 'Sustainable Energy Community' during the lifetime of the Plan.</p>	No	The outcome of the objective is likely to provide positive impacts in terms of reduced greenhouse gas/carbon emissions and supporting sustainable energy communities
Climate	CDP2.17 Renewable Heat	<p>It is an objective of the Development Plan:</p> <p>To support and encourage the development of District Heating, in compliance with the objectives set out in Chapter 14, as a means of facilitating:</p> <p>a) The increased use of heat generated from indigenous, low carbon, renewable resources (e.g., bio-energy, solar and geothermal);</p> <p>b) The utilisation and distribution of useful waste heat from large thermal processes; and</p> <p>c) The utilisation and distribution of useful heat from a combined heat and power (CHP) plant, where such a plant's primary energy is met by indigenous, low carbon, renewable resources (e.g., bio energy, solar and geothermal).</p>	No	<p>The supply of district heating is positive in provision of sustainable heating sources and helping to reduce heat waste.</p> <p>While the objective is positive the construction of heating systems can potentially result in adverse effects upon the integrity of European sites should source -receptor – pathway exist.</p> <p>This is a broad objective with no specific heating development project detailed. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data.</p> <p>Any development shall be subject to Appropriate Assessment and planning process as required.</p>

	hydroelectric schemes and Fisheries' DCENR and Inland Fisheries Ireland and other related legislation/ guidance that is available , in accordance with proper planning and sustainable development.	However, in the absence of appropriate hydrological, hydromorphological and environmental assessments there is the potential to for impacts upon European sites. In addition, cumulative effect of multiple small-scale hydropower must be considered during the design and planning process.	cumulative effect of multiple hydro power developments shall be considered at earliest stage within planning and design process.
		In the absence of mitigation this objective has the potential to result in adverse effects upon the integrity of European sites.	
Climate	CDP2.22 It is an objective of Clare County Council: Ardnacrush To support the utilisation of all of the existing infrastructure at Ardnacrusha Hydroelectric Power Station, to increase its power input to the National Energy Grid.	Yes Ardnacrusha power station and trail race lie upstream and downstream of the Lower River Shannon SAC. Migratory fish species such as salmon and lamprey are QIs of the SAC. In addition, the critically endangered European eel runs this river also. There are known fish passage issues at Ardnacrusha. The conservation objectives for the Lower River Shannon SAC note that" <i>The large hydro-electric station at Ardnacrusha and the Parteen regulating weir present considerable obstructions to upstream passage of salmon on the Shannon main channel. While both have fish passes installed, upstream migration of salmon is still problematical. Further weirs upstream on the Shannon also restrict access to spawning habitat.</i> " The SAC also contains QI aquatic habitats with the QI habitat Watercourses of plain to montane levels with the <i>Ranunculion fluitantis</i> and <i>Callitriche-Batrachion</i> vegetation (3260) mapped downstream and hydrological regime being important to maintenance of this habitat. Increase power input to the grid has the potential to require alteration to flows at the dam. This	Any development of the Ardnacrusha Hydroelectric Power Station shall adhere to the overarching environmental objective within the Clare Development Plan and the Renewable Energy Strategy, CDP3.1 and RES1.1 Any increase in power input from Ardnacrusha Hydroelectric Power Station to the grid shall be subject to the appropriate hydrological, hydromorphological and environmental assessments as required. This shall include an assessment of impacts upon fish migration and, the cumulative effect of increasing power input in combination with any other development or hydro power development shall be considered at earliest stage within planning and design process.

REPORT

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
		Objective CDP3.1 is an overarching objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. Additional objectives (CDP15.3 and CDP15.4) bolster the level of protection for European sites.	
Housing CDP5.11 Lifelong Housing	It is an objective of the Development Plan: a) To ensure that new housing developments are attractive, safe, provide a range of house types and that accessibility and lifetime adaptability that can accommodate the changing needs of a household over time are key elements in house design; b) To provide and facilitate the provision of accommodation to meet the needs of the older people and to encourage the provision of a range of housing options for older people in appropriate, convenient and easily accessible locations; c) Promote 'aging in place' opportunities for 'downsizing' or 'right sizing' within their community; d) To support the development of new nursing home and day care facilities in towns and villages in the County; e) To support nursing home and day care facilities on brownfield sites outside of settlements, subject to normal site suitability criteria; and f) To proactively support the implementation of the Smart Ageing and National Positive Ageing policies, the An Garda Síochána Older People Strategy and the Clare Age Friendly Strategy and Action Plan 2018-2022.	Yes The construction and operation of any new development for nursing homes and day care facilities has the potential to result in adverse effects upon European sites through direct/indirect disturbance of habitats or species or water quality impacts via WWTP discharges. Development has been assessed within Volume 3 where zoning for such development has been identified within the corresponding Municipal District Settlement Statements. Objective CDP3.1 is an overarching objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. Additional objectives (CDP15.3 and CDP15.4) bolster the level of protection for European sites. Objective CDP15.11 makes provision for consideration of environmental impacts during brownfield and contaminated land regeneration.	Any new nursing home development shall ensure there is adequate WWTP treatment capacity within existing facilities where connections to public wastewater infrastructure is possible. Any new nursing home development where connection to an existing wastewater treatment plant is not possible shall ensure that the provision of a private waste water treatment system shall only be permitted where it can be demonstrated that the proposed system meets standards set out within EU and national legislation and guidance. Any development new holiday homes with private waste water treatment systems shall adhere to the mitigation stipulated within CDP11.32.

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
		<p>However, it should be ensured that there is adequate WWTP capacity before any new nursing home developments are permitted in order to prevent impacts to water quality.</p> <p>There is potential for adverse effects upon the integrity of European sites as a result of water quality deterioration.</p>	
Housing	<p>CDP5.12 It is an objective of the Development Plan: Accommodation for People with Disabilities</p> <p>a) To provide and facilitate the provision of accommodation to meet the needs of those with disabilities through the provision and/or adaptation of appropriate accommodation and through the promotion of lifetime adaptable homes;</p> <p>b) To require all new residential buildings to provide a ground floor low level access shower and toilet to ensure adaptability to future needs; and</p> <p>c) To support housing options for older people and persons with disabilities in line with current and future national policies and plans including Rebuilding Ireland: An Action Plan for Housing and Homelessness.</p>	<p>No</p> <p>Objective relates to the provision of suitably provisioned housing for those with disabilities. Pathways for potential impacts upon European sites were not identified.</p>	
Housing	<p>CDP5.13 Student Accommodation</p> <p>It is an objective of the Development Plan:</p> <p>a) To facilitate the provision of high quality student accommodation in appropriate locations having regard to relevant guidance in relation to residential development; and</p> <p>b) To encourage new student accommodation to locate in areas where smarter travel transport options are available.</p>	<p>Yes</p> <p>The construction and operation of any new student housing development has the potential to result in adverse effects upon European sites through direct/indirect disturbance of habitats or species or water quality impacts via wwtp discharges.</p> <p>Development has been assessed within Volume 3 where zoning for such development has been identified within the corresponding Municipal District Settlement Statements.</p>	<p>Any new student development shall ensure there is adequate WWTP treatment capacity within existing facilities where connections to public wastewater infrastructure is possible.</p> <p>Where connection to an existing wastewater treatment plant is not possible shall ensure that the provision of a private waste water treatment system shall only be permitted where it can be demonstrated that the proposed system meets standards set out within EU and national legislation and guidance</p>

REPORT

	<p>shareholder in the management company and include a similar condition on any contract for subsequent disposal of the property.</p> <p>v. Adherence to the environmental assessment criteria set out in section 11.4.3.1 of this plan; and</p> <p>i) To encourage and support a changeover from septic tanks/private wastewater treatment plants to public collection networks wherever feasible, subject to connection agreements with Irish Water and to ensure that any future development connects to the public wastewater infrastructure where it is available;</p>		
<p>Physical Infrastructure, Environment and Energy</p> <p>CDP11.33 Strategic Wastewater Treatment Projects</p>	<p>It is an objective of Clare County Council:</p> <p>a) To support investment and the sustainable development of strategic wastewater treatment facilities by Irish Water in County Clare arising from initiatives including Investment Plans and Strategic Drainage Area Plans subject to appropriate environmental assessment and the planning process;</p> <p>b) To liaise with Irish Water to ensure adequate wastewater treatment facilities are available to accommodate population growth in the County;</p> <p>c) To ensure that the assimilative capacity of the receiving environment is not exceeded and that increased wastewater discharges from population growth does not contribute to degradation of water quality and to avoid adverse impacts on the integrity of the Natura 2000 network;</p> <p>d) To support Irish Water to eliminate untreated discharges from settlements in the short-term, while planning strategically for the long-term in tandem with <i>Project Ireland 2040</i> and the <i>RSES</i> and in increasing compliance with the requirements of the <i>Urban Waste Water Treatment Directive</i>;</p> <p>e) To support and facilitate the separation of foul and surface water networks in the County; and</p>	<p>No</p> <p>Broadly positive objective. Support for the provision and upgrade of waste water treatment facilities is positive in helping to increase the quality of effluent discharge to surface waters.</p> <p>The objective ensures that the water bodies receiving discharges have sufficient assimilative capacity and there is no water quality deterioration which may impact European sites.</p> <p>While construction and operation of new facilities/networks may result in impacts it is acknowledged within the objective that plans shall be subject to appropriate environmental and planning process.</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required) and environmental objectives within the CDP.</p>	

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
	f) To liaise with Irish Water to identify wastewater treatment plants which are subject to flooding from severe weather events, and to advocate for the prioritisation of these plants for suitable upgrades.		
Physical Infrastructure, Environment and Energy	<p>CDP11.34 It is an objective of Clare County Council: Rural Wastewater Treatment Programmes and the initiatives of Irish Water, s</p> <p>a) To support investment in the sustainable development of rural waste water treatment programmes and the initiatives of Irish Water, communities and developers in small rural settlements to identify sustainable solutions subject to available funding for such services including the Rural Regeneration and Development Fund of the <i>NDP</i>; and</p> <p>b) To support the servicing of rural villages (serviced sites) to provide an alternative to one-off housing in the countryside; and</p> <p>c) To ensure that any private wastewater treatment system proposed complies with the environmental requirements of Objectives CDP4.2, CDP4.5 and CDP3.1 of this plan.</p>	<p>Yes</p> <p>Development within rural areas has been assessed within Volume 3 where zoning for such development has been identified within the corresponding Municipal District Settlement Statements.</p> <p>CDP11.34 notes that any new private waste water treatment system must comply with environmental requirements of CDP4.2, CDP4.5 and CDP3.1.</p> <p>Objective CDP3.1 is an overarching objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. Additional objectives (CDP9.4c, CDP15.3 and CDP15.4) bolster the level of protection for European sites.</p> <p>It is considered that mitigation in term of private WWTPs is required for CDP4.2 and CDP4.5 and therefore mitigation required for this objective also.</p>	<p>Any development in rural areas where connection to an existing wastewater treatment plant is not possible that the provision of a private waste water treatment system shall only be permitted where it can be demonstrated that the proposed system meets standards set out within EU and national legislation and guidance</p> <p>Any development of private waste water treatment systems within rural shall adhere to the mitigation stipulated within CDP11.32</p>

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
		<p>In the absence of cumulative assessments as well as robust maintenance and monitoring controls during construction, operation and decommissioning there is the potential for private WWTP systems to impact water quality, WFD objectives and the Annex species and habitats within hydrologically/ hydro geologically connected European sites.</p> <p>Of particular note is the interesting geology of County Clare with its karst landscape. This means that any pollutants entering karstic groundwater bodies can travel for kilometres forming pathways to even remote European sites.</p> <p>In the absence of mitigation this objective has the potential to result in adverse effects upon the integrity of European sites</p>	
Physical Infrastructure, Environment and Energy	<p>CDP11.35 It is an objective of Clare County Council:</p> <p>Waste Management a) To support and facilitate the implementation of the EU Action Plan for the Circular Economy – ‘Closing the Loop’, the EU Raw Material Initiative, A Waste Action Plan for a Circular Economy – Ireland’s National Waste Policy 2020-2025 and the Southern Region Waste Management Plan 2015-2021;</p> <p>b) To support and promote circular economy principles prioritising prevention, reuse, recycling and recovery, to support a healthy environment, economy and society;</p> <p>c) To encourage and facilitate the development of new alternatives and technological advances in relation to waste management;</p> <p>d) To support the development of waste recycling facilities at appropriate locations in County Clare as a means of facilitating a reduction in the quantity of waste that goes to landfill disposal sites;</p>	<p>Support for the reduction of waste, promotion of circular economy and promotion of environmental awareness on recycling is a positive objective. There are aspects to this objective which may result in impacts to European sites.</p> <p>Air or water emissions from waste recycling facilities have the potential to result in impacts to the integrity of European sites altering air/water quality beyond requirements of QIs/SCIs.</p> <p>Re-development of brownfield or landfill sites has the potential to result in adverse effects upon European sites through disturbance, habitat fragmentation or other impacts to QI/SCI conservation objectives such as water quality degradation.</p>	

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
	<p>e) To promote environmental awareness measures and action programmes to ensure good environmental awareness and practices, the recycling of waste, water management, and energy conservation;</p> <p>f) To have regard to the <i>Best Practice Guidelines on the Preparation of Waste Management Plans for Construction and Demolition Projects</i>, July 2006 (and any subsequent guidelines) in the management of waste from construction and demolition projects and to require the submission of a Construction and Demolition Waste Management Plan for projects in excess of the following thresholds:</p> <ul style="list-style-type: none"> • New residential developments of 10 houses or more, • New developments (other than the bullet point above), including institutional, educational, health and other public facilities, with an aggregate floor area in excess of 1,250m², • Demolition/renovation/refurbishment projects generating in excess of 100m³ in volume of construction and demolition waste, • Civil engineering projects producing in excess of 500m³ of waste, excluding waste materials used for development works on the site. <p>The Council may also require the submission of Construction and Demolition Waste Management Plans for other developments, and this will be managed through the pre-planning consultation and planning application processes;</p> <p>g) To require proposals for brownfield regeneration in strategic locations to be accompanied by a site risk assessment and a clear waste plan for any wastes</p>	<p>However, this is a broad objective. No geographic area is stipulated. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data e.g., location of recovery and pre-treatment facilities. Any development of waste recycling facilities/ brownfield or contaminated land sites shall be subject to the Appropriate Assessment and planning processes as required.</p> <p>In addition, Objective CDP3.1 is an overarching objective regarding the protection of the European site network and ensures that the statutory assessment process is followed. All plans/projects shall be subject to the AA process to assess potential impacts upon European sites in accordance with the EU Habitats Directive. Additional objectives (CDP9.4c, CDP15.3 and CDP15.4) bolster the level of protection for European sites.</p> <p>Objective CDP11.35g ensure that any proposals for brownfield regeneration must be accompanied with a site risk assessment and a clear waste plan. Objective CDP15.11 makes provision for consideration of environmental impacts during brownfield and contaminated land regeneration.</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such</p>

Any development of waste recovery facilities shall be subject to the Appropriate Assessment and planning processes as required.</p> <p>Support for the reduction of waste is a broadly positive objective and it is acknowledged within the objective that any waste recovery development or pre-treatment processes must demonstrate they will not adversely effect the integrity of European sites and comply with RBMP.</p> <p>Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development as required and environmental objectives within the CDP.</p>	

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
Physical Infrastructure, Environment and Energy CDP11.37	It is an objective of Clare County Council: Litter Management To implement the provisions of the <i>Clare County Litter Management Plan 2022-2024</i> and any updated version of this Plan.	No No pathways for potential impacts to European sites identified. This objective is supporting the implementation of the <i>County Litter Management Plan</i> . Any development identified within the plan shall be subject to the Appropriate Assessment process.	
Physical Infrastructure, Environment and Energy CDP11.38	It is an objective of Clare County Council: Construction & Demolition Waste a) To require that a C&D Waste Management Plan is prepared by the developer having regard to the <i>Best Practice Guidelines on the Preparation of Waste Management Plans for Construction and Demolition Projects</i> , July 2006 (and any subsequent guidelines) for new construction or demolition projects and to require that where appropriate the maximum amount of waste material generated on site is reused and recycled; b) To promote the production and reuse of aggregates from C&D waste and their use in construction projects in the Region; and c) To encourage the development of C&D waste recycling facilities at suitable sites, including quarries, subject to normal planning and environmental considerations.	Support for the reduction of waste is a broadly positive objective. The objective supports the reuse of waste material and waste management plans are prepared by developers. This is positive in helping to reduce uncontrolled disposal of C&D waster which may impact upon European sites via pollution. . No geographic area is stipulated for aspects of this objective. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data e.g., location of new C&D facilities. Any development of waste disposal facilities shall be subject to the Appropriate Assessment and planning processes as required. It is acknowledged within the objective that any C&D waste recycling facilities are subject to planning and environmental considerations which encompasses assessment of impacts to European sites. Potential for adverse effects is removed provided compliance with mitigation set out in the

Design & Placemaking (design and built environment)	CDP18.4 Universal Design It is an objective of the Development Plan: To require all new buildings, facilities and works to the public realm to meaningfully engage with the principles of universal design so that all environments and buildings can be accessed, understood and used by all persons to the greatest extent possible and to have regard to all existing relevant legislation, publications and guidelines in their design	No Pathways for potential impacts to European sites were not identified.	
Design & Placemaking (design and built environment)	CDP18.5 Sustainable Developments It is an objective of the Development Plan: a) To require all new developments to maximise energy efficiency and conservation and to ensure that they embrace the concept of sustainable design, achieve excellence in siting and design and promote the use of low carbon materials; and .	Broad objective with no specific geographic area. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required.	

REPORT

Objective code	Objective Text	Potential for adverse effect(s) in the absence of mitigation?	Mitigation
		Where zoning for infrastructure has been identified these have been fully assessed in Volume 3 of this NIR.	
		It is noted that supporting energy efficiency and low carbon materials is a positive objective in reducing energy demand and greenhouse gas emissions.	
		Potential for adverse effects is removed provided compliance with mitigation set out in the Appropriate Assessment for any such development (as required), environmental objectives within the CDP and mitigation measures stipulated within the CDP Volume 3.	
Design & Placemaking (design and built environment)	CDP18.6 It is an objective of Clare County Council: a) To encourage and facilitate excellence in the siting and design of new buildings in the county and particularly through contemporary and innovative architectural solutions; b) To encourage and facilitate high standards of energy efficiency; c) To facilitate and promote the use of appropriate low carbon materials in all future development and embrace the principles of sustainable design; d) To ensure the integration of safe and convenient alternatives to the car into the design of our communities, by prioritising walking and cycling accessibility to both existing and proposed developments, and integrating physical activity facilities for all ages; and d) To run a Design Awards Scheme to encourage excellence in the built environment.	No specific geographic area stipulated for CDP18.6a. Therefore, an assessment of potential impacts upon European sites is not possible at this high level. Potential impacts are better assessed at the design stage to ensure they can be avoided or mitigated when informed by site specific data. Any development shall be subject to Appropriate Assessment and planning process as required Where zoning for infrastructure has been identified these have been fully assessed in Volume 3 of the NIR It is noted that supporting energy efficiency and low carbon materials is a positive objective in reducing energy demand and greenhouse gas emissions.

		Appropriate Assessment for any such development (as required), environmental objectives within the CDP and mitigation measures stipulated within the CDP Volume 3.	
Land Use & Zonings CDP19.1 Local Area Plans	It is an objective of Clare County Council: To ensure that a local area plan is prepared and in place for the areas of Ennis & Environs and Shannon Town & Environs during the lifetime of this plan.	No Local Area Plans will be required to undergo the AA process as per law. Plans can only be adopted should it be shown there will be no adverse effects upon the integrity of European sites.	
Land Use & Zonings CDP19.2 Zoning of Lands	It is an objective of Clare County Council: To ensure that sufficient lands are zoned at appropriate locations in the settlement plans and local area plans of the County, in accordance with the Core Strategy population and housing targets, in order to meet the envisaged land use requirements of the area during the lifetime of this development plan.	No Any zoning of lands will be required to undergo the AA process as per law. Plans can only be adopted should it be shown there will be no adverse effects upon the integrity of European sites.	
Land Use & Zonings CDP19.3 Compliance with Zoning	It is an objective of Clare County Council: To require development proposals to comply with the zoning of the subject site in the settlement plans and local area plans.	No Any zoning of lands will be required to undergo the AA process as per law. Plans can only be adopted should it be shown there will be no adverse effects upon the integrity of European sites.

Kilbane	VGA1, VGA2, VGA3	No	Not within 3km Lesser horseshoe bat buffer.	Yes Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs Mitigation Please see mitigation stipulated for 4a.	Broadford_010 flows through settlement and ultimately discharges to Lower River Shannon SAC and River Shannon & River Fergus Estuaries SPA. Potential connection via road drainage or WTP discharge. Yes Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites. Potential for impacts upon water quality during operational phase as a result of inadequate wastewater treatment and discharge resulting in adverse effects upon European sites. Mitigation Appropriate surface water management shall be installed during construction phase to ensure no direct discharges of unattenuated water enters any surface water body and European site. A Surface Water Management Plan shall be	No
