			process (AA screening or NIS as deemed necessary) The proposal shall clearly identify the spatial extent of any tourism activities and shall address the potential for impacts (both in isolation and in combination with other plans/projects) upon European sites. Proposals that cannot avoid adverse effects upon European sites shall not be permitted.			
Labasheeda	UT1	No	Settlement located along boundary of the Lower River Shannon SAC and River Shannon & River Fergus SPA. Parcel 180m from the SPA and SAC. Habitats within and adjacent to UT1 have potential to support SCI birds. Yes Potential impact upon SCI birds (feeding, nesting, roosting, resting habitats) through increased disturbance (visual, physical, noise) and/ or	Yes Potential disturbance /habitat fragmentation identified in 2 which may result in decrease in SCI species density. Potential impacts to water quality were identified in 4a. Should this be of a severe enough magnitude then there is potential for a reduction in species density. e.g., increased sedimentation can smother salmon/lamprey spawning gravels or pollutants can degrade water quality below requirements for QIs Mitigation	Entire settlement located along the Shannon estuary and bounds the Lower River Shannon SAC and River Shannon & River Fergus SPA. Potential connectivity via road drainage or WWT discharges. Yes Potential for impacts upon water quality during construction and operational phase due to unattenuated runoff resulting in adverse effects upon European sites. Potential for impacts upon water quality during	No
